ORIGA SYSTEM PLUS

- ONE CONCEPT
- THREE ACTUATOR OPTIONS

Based on the concept of the rodless pneumatic cylinder, well proven worldwide, Parker Origa now offers the complete solution for actuator systems.

Developed for absolute reliability, high performance, easy handling and optimized design, ORIGA SYSTEM PLUS can master even the most difficult installation requirements.

ORIGA SYSTEM PLUS

is a completely modular concept, enabling pneumatic and electric actuators to be combined with guides and control modules for all kinds of applications.

The main system carriers are the actuators themselves, consisting of extruded aluminium profiles with double dovetail slots on three sides,

providing direct mounting for all modular options.

MODULAR SYSTEM

• Electric Belt Actuator

- For applications with higher speeds and precise movement and positioning for longer travel.

• Electric Screw Actuator

- For higher actuator power and precise movement and positioning.

• Pneumatic Actuator

- For a wide variety of applications with simple handling, combined with simple control possibilities and a broad power spectrum.
- Ideal for fast, repetitive movements and simple positioning duties.

For further information see the Pneumatic Actuators Catalogue A4P011E.

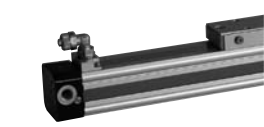

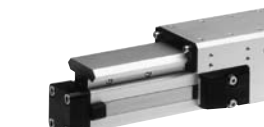

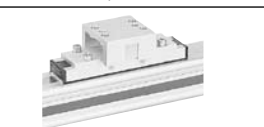

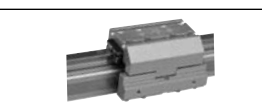

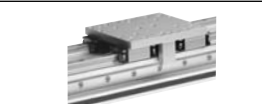

- 18 additional guide variants provide any required precision, performance and load capacity.
- Compact solutions, easy to install and simple to retrofit.
- Valves and control elements can be mounted directly on the pneumatic actuator.
- A wide range of mounting options provides great installation flexibility.

ORIGA SYSTEM PLUS

APPLICATIONS FOR OSP-E ACTUATORS

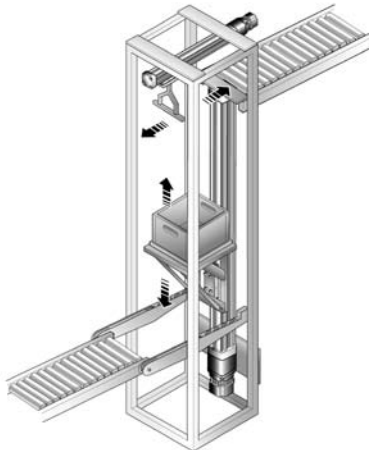

Auto Handling

- high speed pick and place movements

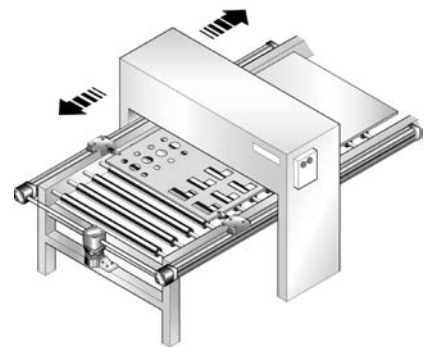

Material Handling Systems

- vertical and horizontal transfer movements

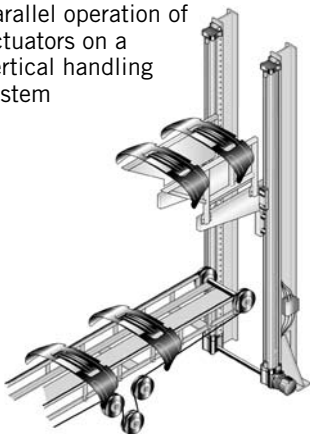

Punching Machines

- accurate feeding and positioning

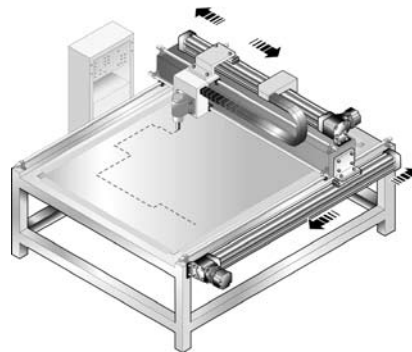

Mechanical Handling

- parallel operation of actuators on a vertical handling system

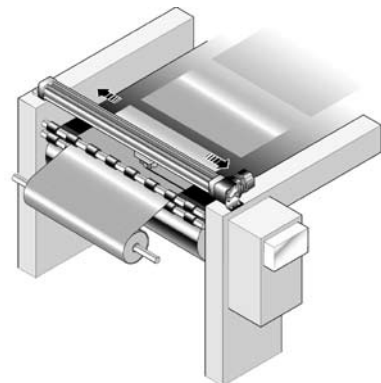

Profile Cutting Machines

- intricate profile movements of water jets and lasers

Slitting Machines

- high speed traverse applications for the slicing of papers and textiles

Spray Coating

- synchronized high speed bi-parting movements

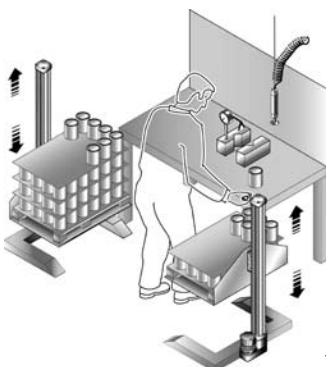

Automatic Doors and Guards

- simple bi-parting operation

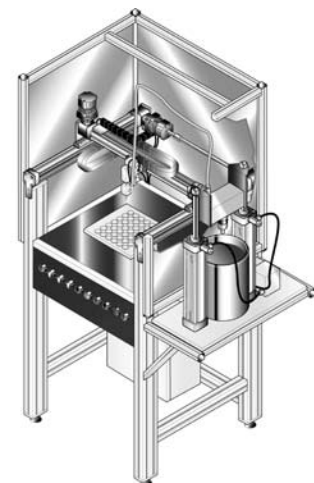

Ergonomic Workstations

- adjustment of working levels

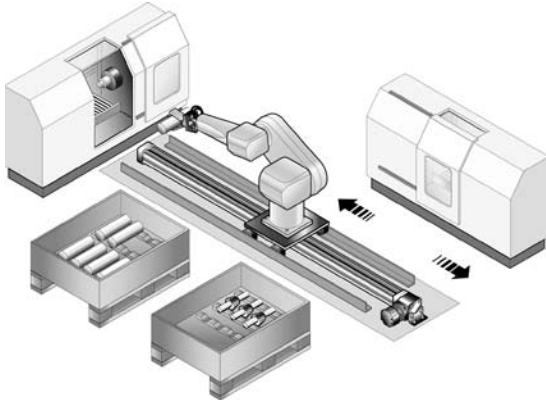

Automated Filling Machines

- accurate 3-axis positioning

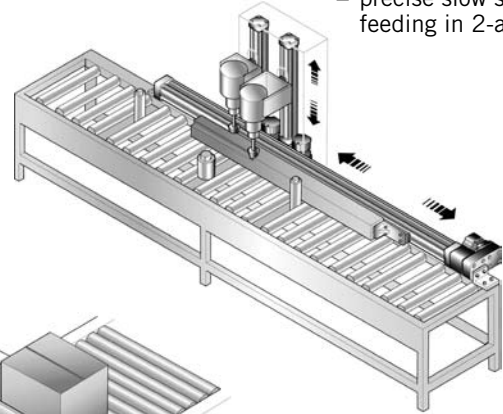

Robotic Installations

- traverse of robots between work stations

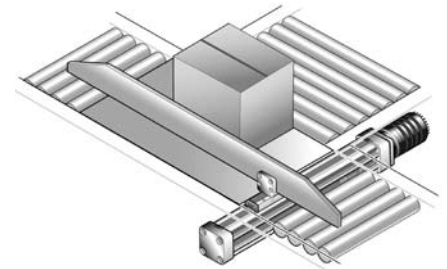

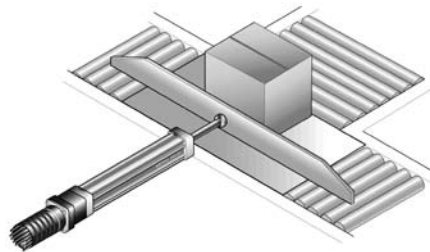

Milling Machines

- precise slow speed feeding in 2-axis

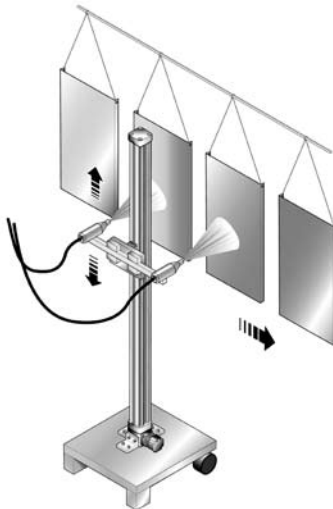

Conveyor Systems

- simple cross-transfer actuators

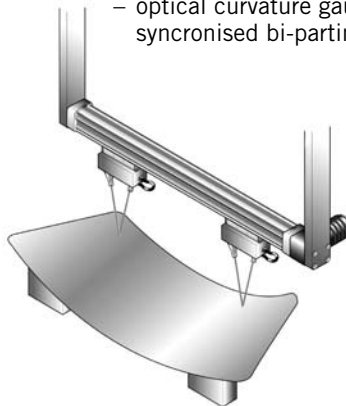

Spraying Equipment

- precision reciprocating action

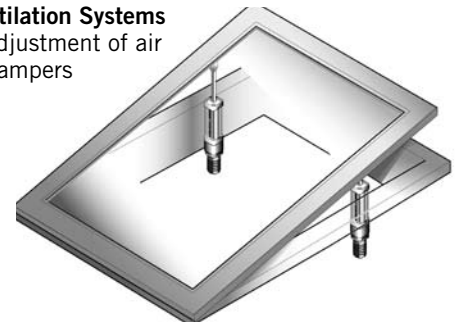

Measuring Systems

- optical curvature gauging using synchronised bi-parting actuation

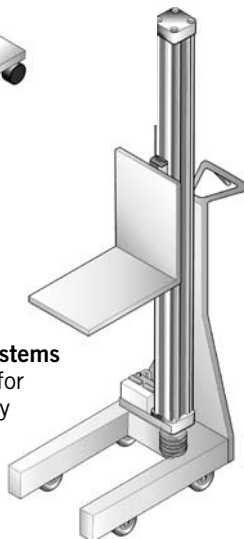

Ventilation Systems

- adjustment of air dampers

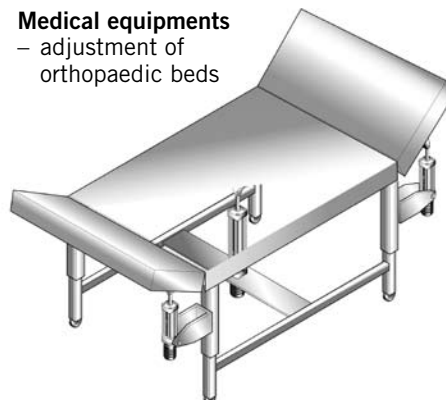

Mobile Lifting Systems

- lifting devices for industrial safety

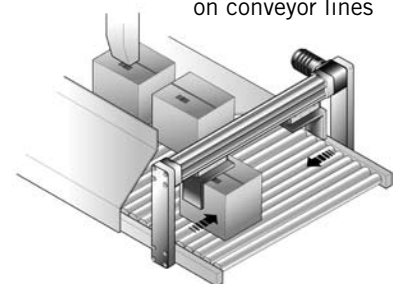

Medical equipments

- adjustment of orthopaedic beds

Conveyor Systems

- centring of packages on conveyor lines

BELT ACTUATOR WITH INTEGRATED GUIDE FOR HEAVY DUTY APPLICATIONS

The latest generation of high capacity actuators, the OSP-E..BHD series combines robustness, precision and high performance. The aesthetic design is easily integrated into any machine constructions by virtue of extremely adaptable mountings.

Belt Actuator with Integrated Guide - selective with Ball Bearing Guide or Roller Guide

Advantages:

- Accurate path and position control
- High force output
- High speed operation
- High load capacity
- Easy installation
- Low maintenance
- Ideal for multi-axis applications

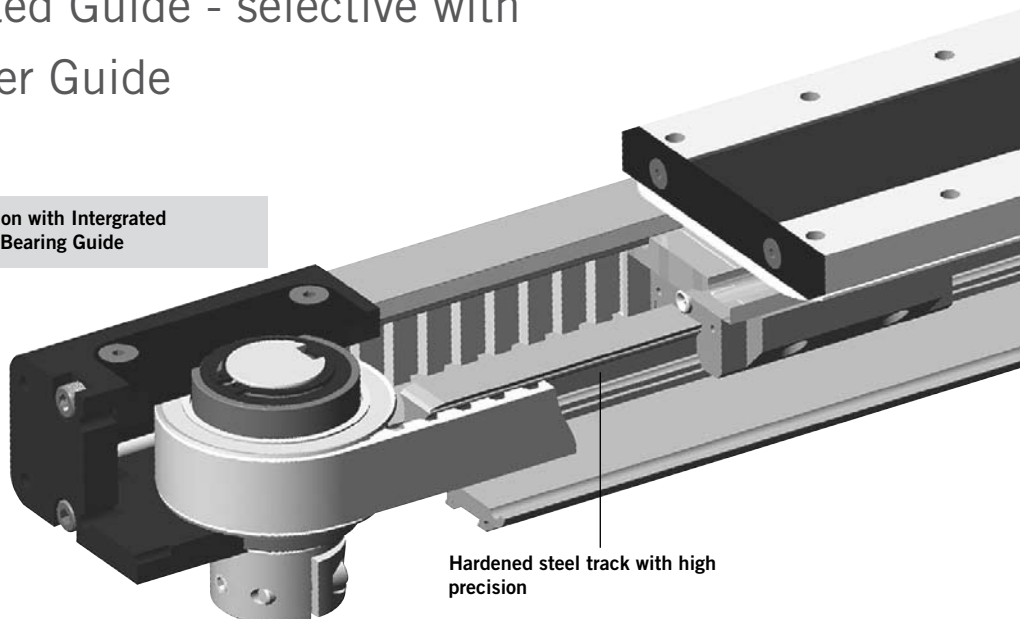

Features:

- Integrated ball bearing guide or integrated roller guide
- Diverse range of multi-axis connection elements
- Diverse range of accessories and mountings
- Complete motor and control packages
- Optional integrated planetary gearbox
- Special options on request

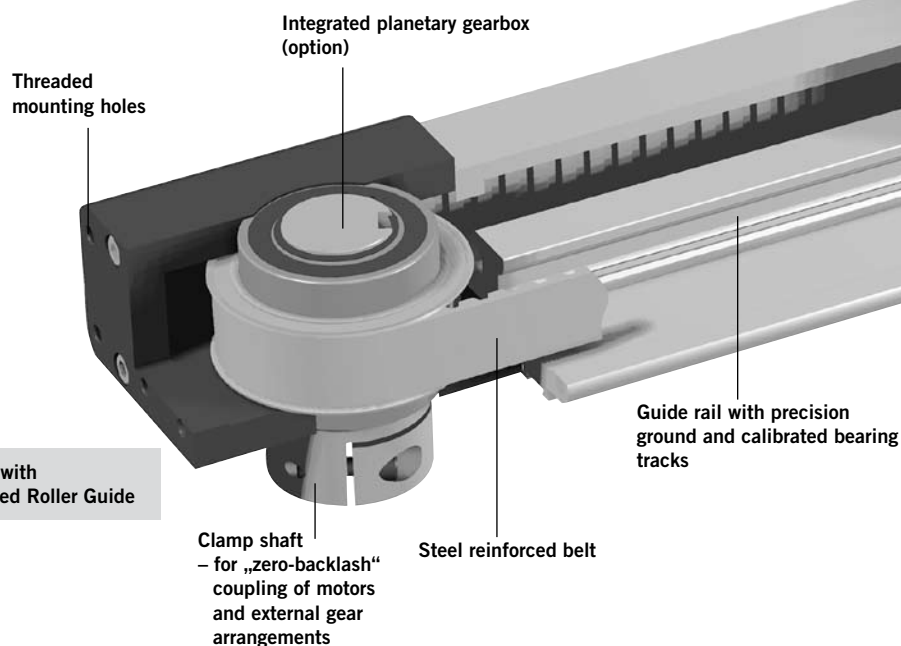

Take the easy route and load all the dimensions into your system. The file is suitable for all current CAD systems – available on CD-Rom or at www.parker-origa.com

Version with Intergrated
Ball Bearing Guide

Version with
Integrated Roller Guide

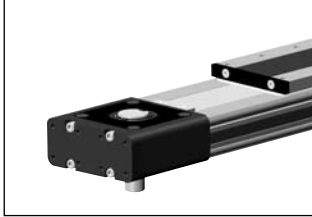

Drive Shaft Versions

Clamp Shaft

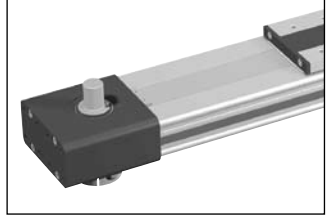

Plain Shaft

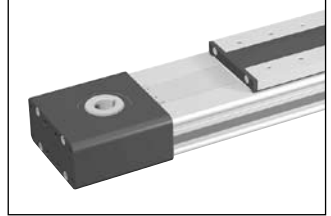

Drive Shaft OPTIONS

Clamp Shaft and Plain Shaft

Hollow Shaft with Keyway

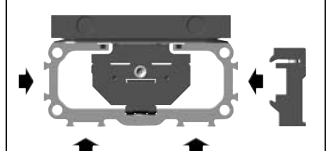

OPTION
Integrated planetary gearbox

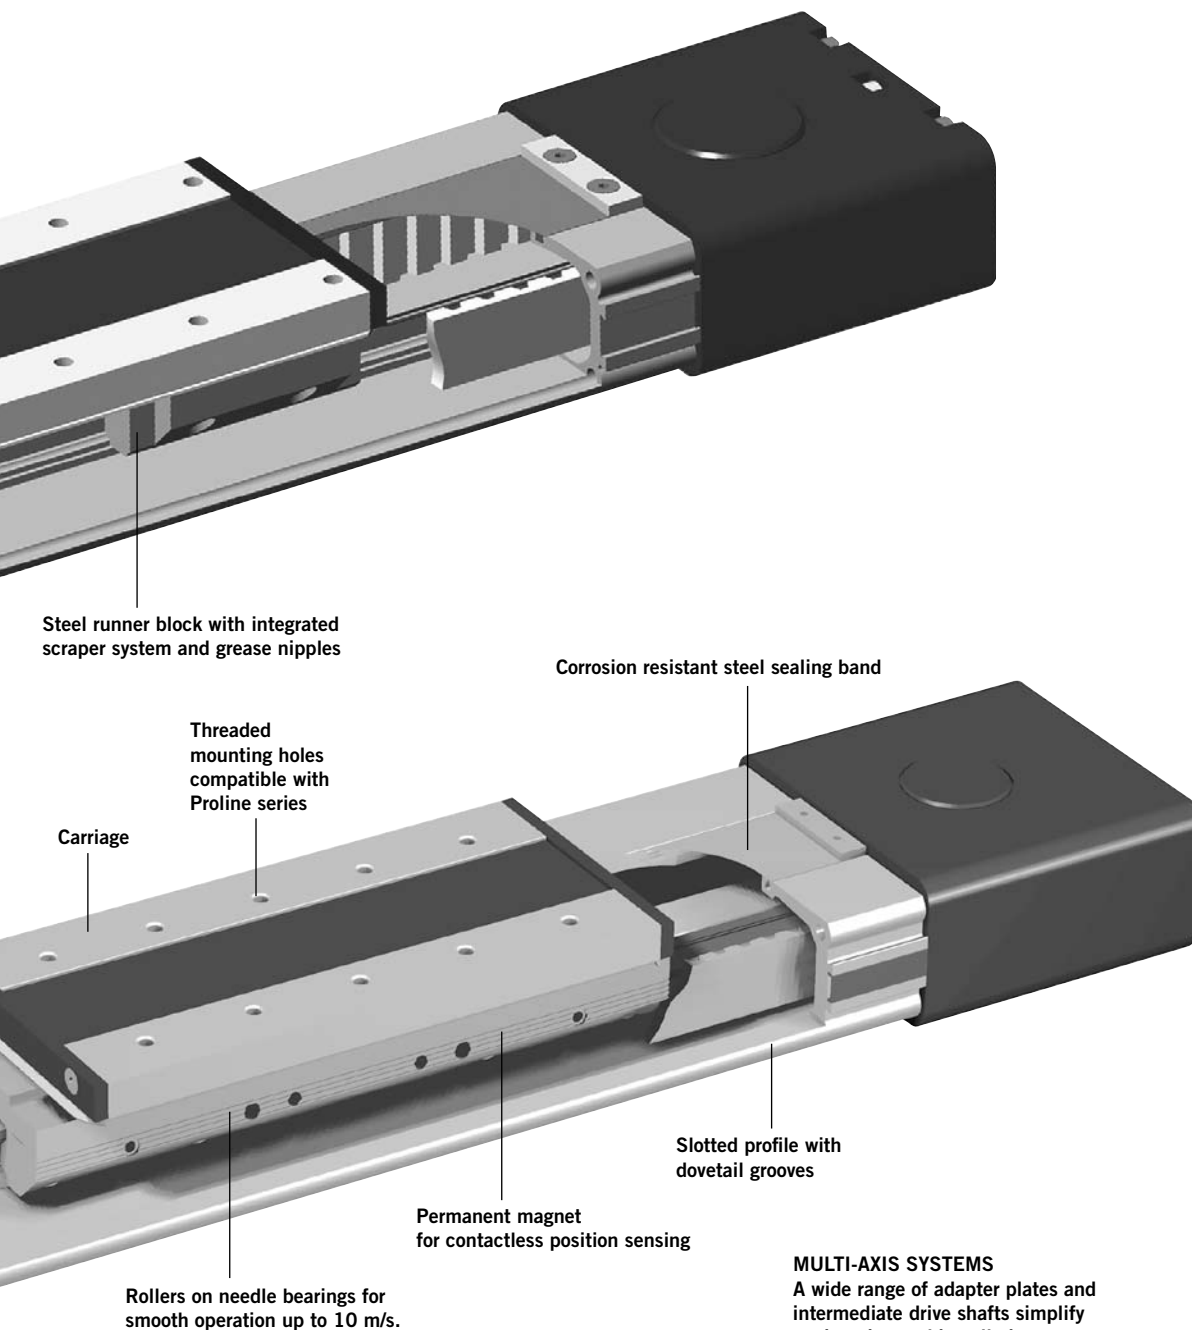

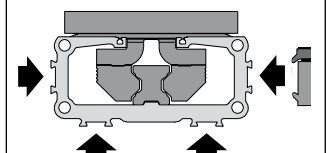

- Highly compact and rigid solution fully integrated in the drive cap housing
- Purpose designed for the BHD series
- Available with three standard ratios (3, 5 and 10)
- Very low backlash
- A wide range of available motor flanges

The dovetailed mounting rails of the new linear actuator expand its function into that of a universal system carrier. Modular system components are simply clamped on

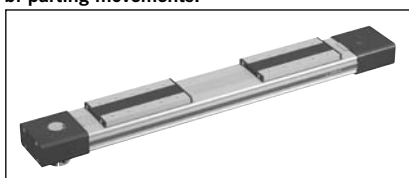

Version with Integrated Ball Bearing Guide

Version with Integrated Roller guide

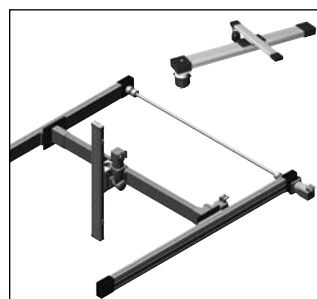

BI-PARTING Version
for perfectly synchronised
bi-parting movements.

MULTI-AXIS SYSTEMS

A wide range of adapter plates and intermediate drive shafts simplify engineering and installation

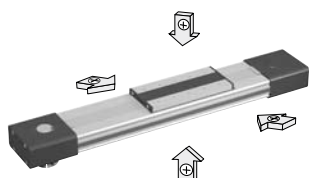

OPTIONS AND ACCESSORIES

OSP-E.. BHD BELT ACTUATOR WITH INTEGRATED GUIDE

STANDARD VERSIONS OSP-E..BHD

Standard carrier with integrated guide and magnets for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

DRIVE SHAFT WITH CLAMP SHAFT

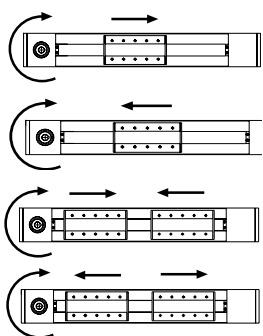

DRIVE SHAFT WITH PLAIN SHAFT

ACTUATING DIRECTION

Important in parallel operations, e.g. with intermediate drive shaft

Standard

Standard –
Bi-Parting
Version

OPTIONS

TANDEM

For higher moment support.

BI-PARTING VERSION

For perfectly synchronised bi-parting movements.

DRIVE SHAFT WITH CLAMP SHAFT AND PLAIN SHAFT

For connections with intermediate drive shaft

HOLLOW SHAFT WITH KEYWAY

For close coupling of motors and external gears.

INTEGRATED PLANETARY GEARBOX

For compact installation and very low backlash.

ACCESSORIES

MOTOR MOUNTINGS

END CAP MOUNTING

For mounting the actuators on the end cap.

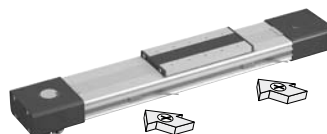

PROFILE MOUNTING

For supporting long actuators or mounting the actuators on dovetail grooves.

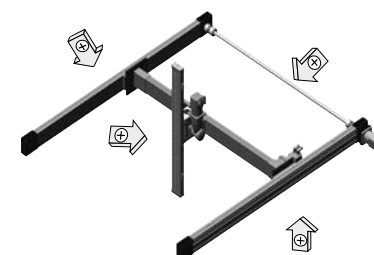

MAGNETIC SWITCHES TYPE RS AND ES

For contactless position sensing of end stop and intermediate carrier positions.

MULTI-AXIS SYSTEMS

For modular assembly of actuators up to multi-axis systems.

Ball Bearing

Guide

Size 20 to 50

Characteristics				
Characteristics		Symbol	Unit	Description
General Features				
Series				OSP-E..BHD
Name				Belt Actuator with integrated Ball Bearing Guide
Mounting				See drawings
Ambient-Temperature range	ϑ_{\min} ϑ_{\max}	°C °C		-30 +80
Weight (mass)		kg		See table
Installation				In any position
Material	Slotted profile			Extruded anodized aluminium
	Belt			Steel-corded polyurethane
	Pulley			Aluminium
	Guide			Ball Bearing Guide
	Guide rail			Hardened steel rail with high precision, accuracy class N
	Guide carrier			Steel carrier with integrated wiper system, grease nipples, preloaded 0.02 x C, accuracy class H
	Sealing band			Hardened, corrosion resistant steel
	Screws, nuts			Zinc plated steel
	Mountings			Zinc plated steel and aluminium
Encapsulation class		IP		54

Weight (mass) and Inertia

OSP-E50BHD*	40	17	15	49180	1738	3103

* Version: Tandem and Bi-parting (Option)

Installation Instructions

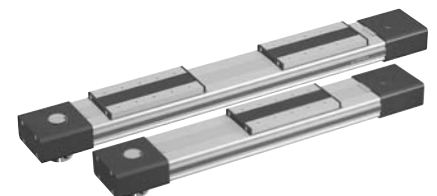

Use the threaded holes in the end cap for mounting the actuator. Check if profile mountings are needed using the maximum allowable unsupported length graph on page 17. At least one end cap must be secured to prevent axial sliding when profile mountings are used.

Maintenance

Depending on operating conditions, inspection of the actuator is recommended after 12 months or 3000 km operation. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

Standard Versions

- Belt Actuator with integrated Ball Bearing Guide
- Drive shaft with clamp shaft or plain shaft
- Choice of motor mounting side
- Dovetail profile for mounting of accessories and the actuator itself

Options

- Tandem version for higher moments
- Bi-parting version for synchronised movements
- Integrated planetary gearbox
- Drive shaft with
 - clamp shaft and plain shaft
 - hollow shaft with keyway
- Special drive shaft versions on request

Sizing Performance Overview

Maximum Loadings

Sizing of Actuator

The following steps are recommended:

1. Determination of the lever arm length l_x , l_y and l_z from m_e to the centre axis of the actuator.
2. Calculation of the load F_x or F_y to the carrier caused by m_e
 $F = m_e \cdot g$
3. Calculation of the static and dynamic force F_A which must be transmitted by the belt.
 $F_{A(\text{horizontal})} = F_a + F_0 = m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$
 $F_{A(\text{vertical})} = F_g + F_a + F_0$
 $= m_g \cdot g + m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$
4. Calculation of all static and dynamic moments M_x , M_y and M_z which occur in the application.
 $M = F \cdot l$
5. Selection of maximum permissible loads via Table T3.
6. Calculation and checking of the combined load, which must not be higher than 1.
7. Checking of the maximum torque that occurs at the drive shaft in Table T2.
8. Checking of the required action force F_A with the permissible load value from Table T1.

For motor sizing, the effective torque must be determined, taking into account the cycle time.

Legend

- l = distance of a mass in the x-, y- and z-direction from the guide [m]
 m_e = external moved mass [kg]
 m_{LA} = moved mass of actuator [kg]
 m_g = total moved mass ($m_e + m_{LA}$) [kg]
 $F_{x/y}$ = load exerted on the carrier in dependence of the installation position [N]
 F_A = action force [N]
 M_0 = no-load torque [Nm]
 U_{ZR} = circumference of the pulley (linear movement per revolution) [m]
 g = gravity [m/s²]
 a_{max} = maximum acceleration [m/s²]

Performance Overview T1

²⁾ longer strokes on request

Maximum Permissible Torque on Drive Shaft Speed / Stroke T2															
OSP-E20BHD				OSP-E25BHD				OSP-E32BHD				OSP-E50BHD			
Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]
1	11	1	11	1	31	1	31	1	71	1	71	1	174	1	174
2	10	2	11	2	28	2	31	2	65	2	71	2	159	2	174
3	9	3	8	3	25	3	31	3	59	3	60	3	153	3	138
4		4	7	4	23	4	25	4	56	4	47	4	143	4	108
5		5	5	5	22	5	21	5	52	5	38	5	135	5	89

Important:

The maximum permissible torque on the drive shaft is the lowest value of the speed- or stroke-dependent torque value.

Example above:

OSP-E25BHD, stroke 5 m, required speed 3 m/s from table T2
 speed 3 m/s gives 25 Nm and stroke 5 m gives 21 Nm. Max. torque for this application is 21 Nm.

Maximum Permissible Loads T3					
Series	Max. applied load F_y [N] F_z [N]		Max. moments [Nm] M_x M_y M_z		
OSP-E20BHD	1600	1600	21	150	150
OSP-E25BHD	2000	3000	50	500	500
OSP-E32BHD	5000	10000	120	1000	1400
OSP-E50BHD	12000	15000	180	1800	2500

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is

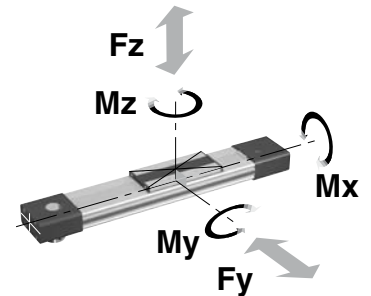

calculated with the equation shown here. The maximum permissible loads must not be exceeded.

Equation for Combined Loads

$$\frac{F_y}{F_y(\max)} + \frac{F_z}{F_z(\max)} + \frac{M_x}{M_x(\max)} + \frac{M_y}{M_y(\max)} + \frac{M_z}{M_z(\max)} \leq 1$$

The total of the loads must not exceed >1 under any circumstances.

Forces, loads and moments

The distance (l_x, l_y, l_z) for calculation of moments relates to the centre axis of the actuator. Bending moments are calculated from the centre of the actuator and F indicates actual force.

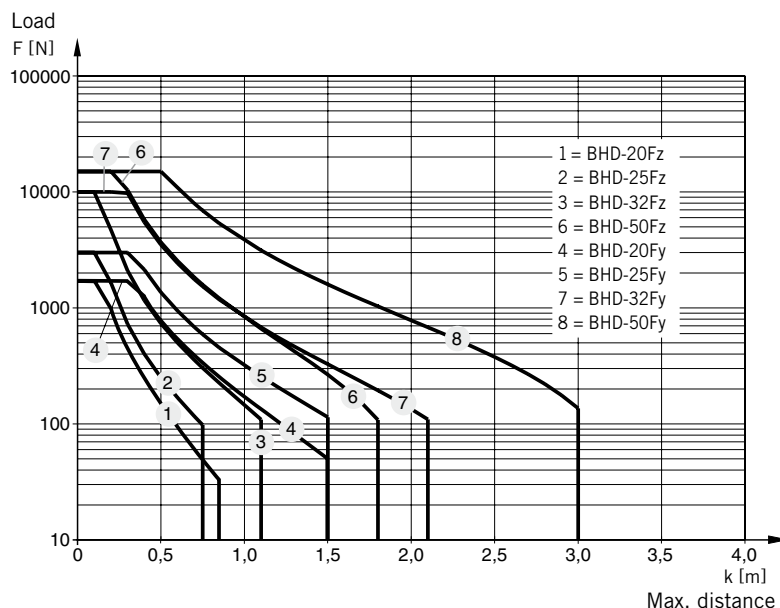

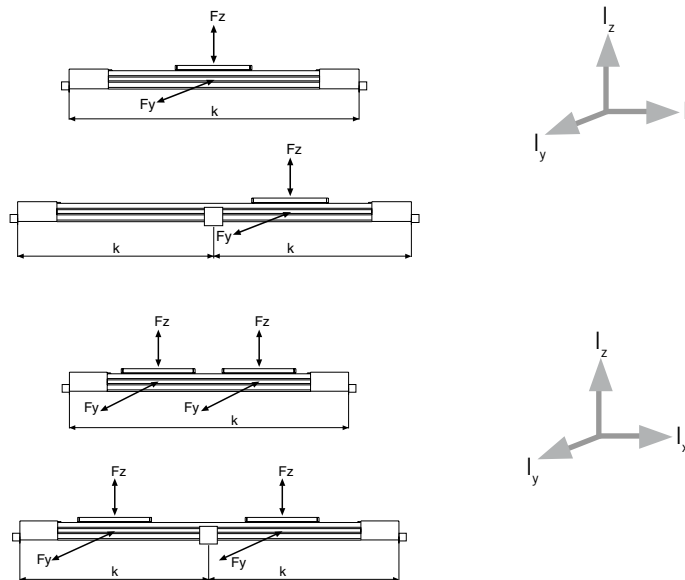

$$M = F \cdot l \text{ [Nm]}$$

$$M_x = M_{x \text{ static}} + M_{x \text{ dynamic}}$$

$$M_y = M_{y \text{ static}} + M_{y \text{ dynamic}}$$

$$M_z = M_{z \text{ static}} + M_{z \text{ dynamic}}$$

Maximum Permissible Unsupported Length – Placing of Profile mounting

Maximum Permissible Unsupported Length

Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to 5700 mm.

Other stroke lengths are available on request.

The end of stroke must not be used as a mechanical stop.

Allow an additional safety clear-ance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm.

The use of an AC motor with frequency converter normally requires a larger clearance than that required for servo systems.

For advice, please contact your local Parker Origa technical support department.

* For Bi-parting version the max. load (F) is the total load of both carriers

$$F = F_{\text{carrier 1}} + F_{\text{carrier 2}}$$

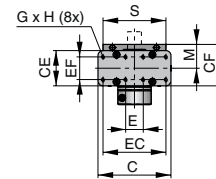

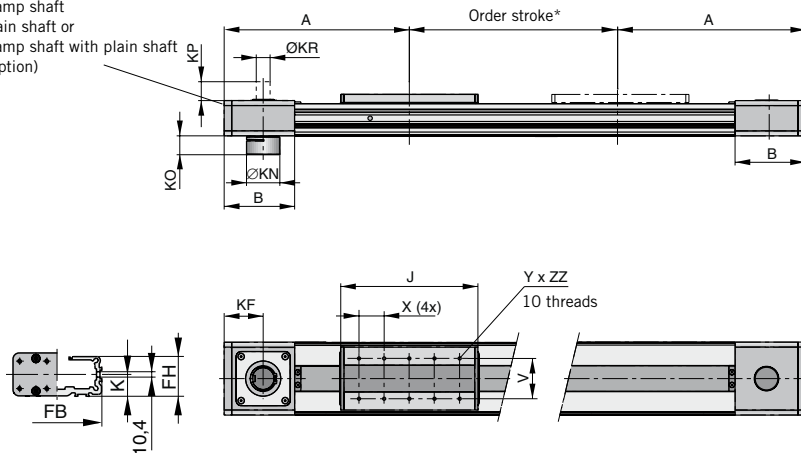

k = Max. permissible distance between mountings/Profile Mounting for a given load F.

When loadings are below or up to the curve in the graph below the deflection will be max. 0.01 % of distance k.

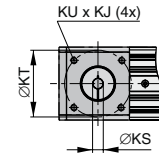

OSP-E..BHD Belt Actuator with Integrated Ball Bearing Guide – Basic Unit

Drive shaft versions with

- clamp shaft
- plain shaft or
- clamp shaft with plain shaft (Option)

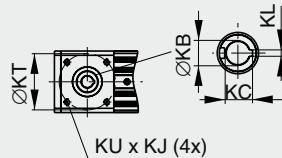

Mounting holes for motor flange or external planetary gearbox ¹⁾

Hollow shaft with keyway (Option) Dimension Table [mm]

Series	KB*	KC	KL	KT	KU x KJ
OSP-E20BHD	12 ^{H7}	13.8	4	65.7	M6 x 8

Series OSP-E..BHD – with Integrated Planetary Gearbox (Option)

Integrated Planetary Gearbox

Features

- Highly compact and rigid solution fully integrated in the drive cap housing
- Purpose designed for the BHD series.
- Available with three standard ratios (3, 5 and 10)
- Very low backlash
- A wide range of available motor flanges

Please contact your local Parker Origa technical support for available motor flanges.

Material:
Aluminium (AL-H) / Steel (St-H)

Standard Version:

- Gearbox on opposite side to carrier.

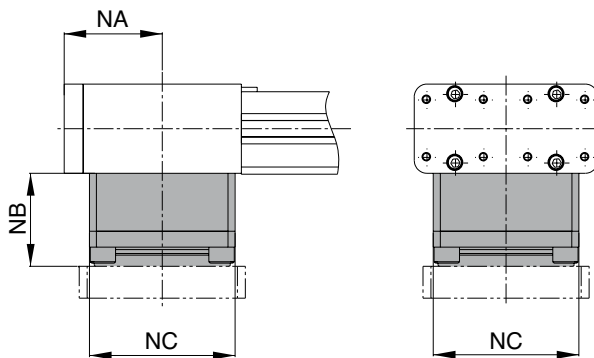

Note:

When ordering, specify model/type of motor and manufacturer for correct motor flange.

*Version: Tandem and Bi-parting (Option)

Installation Instructions

Use the threaded holes in the end cap for mounting the actuator. Check if profile mountings are needed using the maximum allowable unsupported length graph on page 22. At least one end cap must be secured to prevent axial sliding when profile mountings are used.

Maintenance

Depending on operating conditions, inspection of the actuator is recommended after 12 months or 3000 km operation. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

OSP-E50BHD	3704	87	365	365	

Sizing Performance Overview

Maximum Loadings

Sizing of Actuator

The following steps are recommended:

1. Determination of the lever arm length l_x, l_y and l_z from m_e to the centre axis of the actuator.
2. Calculation of the load F_x or F_y to the carrier caused by m_e
 $F = m_e \cdot g$
3. Calculation of the static and dynamic force F_A which must be transmitted by the belt.

$$F_{A(horizontal)} = F_a + F_0 = m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$$

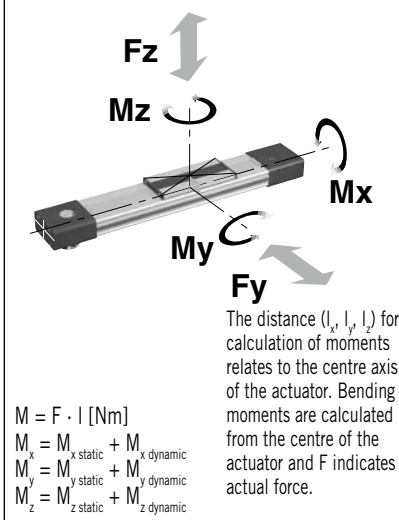

$$F_{A(vertical)} = F_g + F_a + F_0 = m_g \cdot g + m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$$
4. Calculation of all static and dynamic bending moments M_x, M_y and M_z which occur in the application
 $M = F \cdot l$
5. Selection of maximum permissible loads via Table T3.
6. Calculation and checking of the combined load, which must not be higher than 1.
7. Checking of the maximum torque that occurs at the drive shaft in Table T2.
8. Checking of the required action force F_A with the permissible load value from Table T1.

For motor sizing, the effective torque must be determined, taking into account the cycle time.

Legend

- l = distance of a mass in the x-, y- and z-direction from the guide [m]
- m_e = external moved mass [kg]
- m_{LA} = moved mass of actuator [kg]
- m_g = total moved mass ($m_e + m_{LA}$) [kg]
- $F_{x/y}$ = load exerted on the carrier in dependence of the installation position [N]
- F_A = action force [N]
- M_0 = no-load torque [Nm]
- U_{ZR} = circumference of the pulley (linear movement per revolution) [m]
- g = gravity [m/s²]
- a_{max} = maximum acceleration [m/s²]

Forces, loads and moments

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is

calculated with the equation shown here. The maximum permissible loads must not be exceeded.

Equation for Combined Loads

$$\frac{F_y}{F_y(\max)} + \frac{F_z}{F_z(\max)} + \frac{M_x}{M_x(\max)} + \frac{M_y}{M_y(\max)} + \frac{M_z}{M_z(\max)} \leq 1$$

The total of the loads must not exceed >1 under any circumstances.

Maximum Permissible Unsupported Length

Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to 5700 mm.

Other stroke lengths are available on request.

The end of stroke must not be used as a mechanical stop.

Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm.

The use of an AC motor with frequency converter normally requires a larger clearance than that required for servo systems.

For advice, please contact your local Parker Origa technical support department.

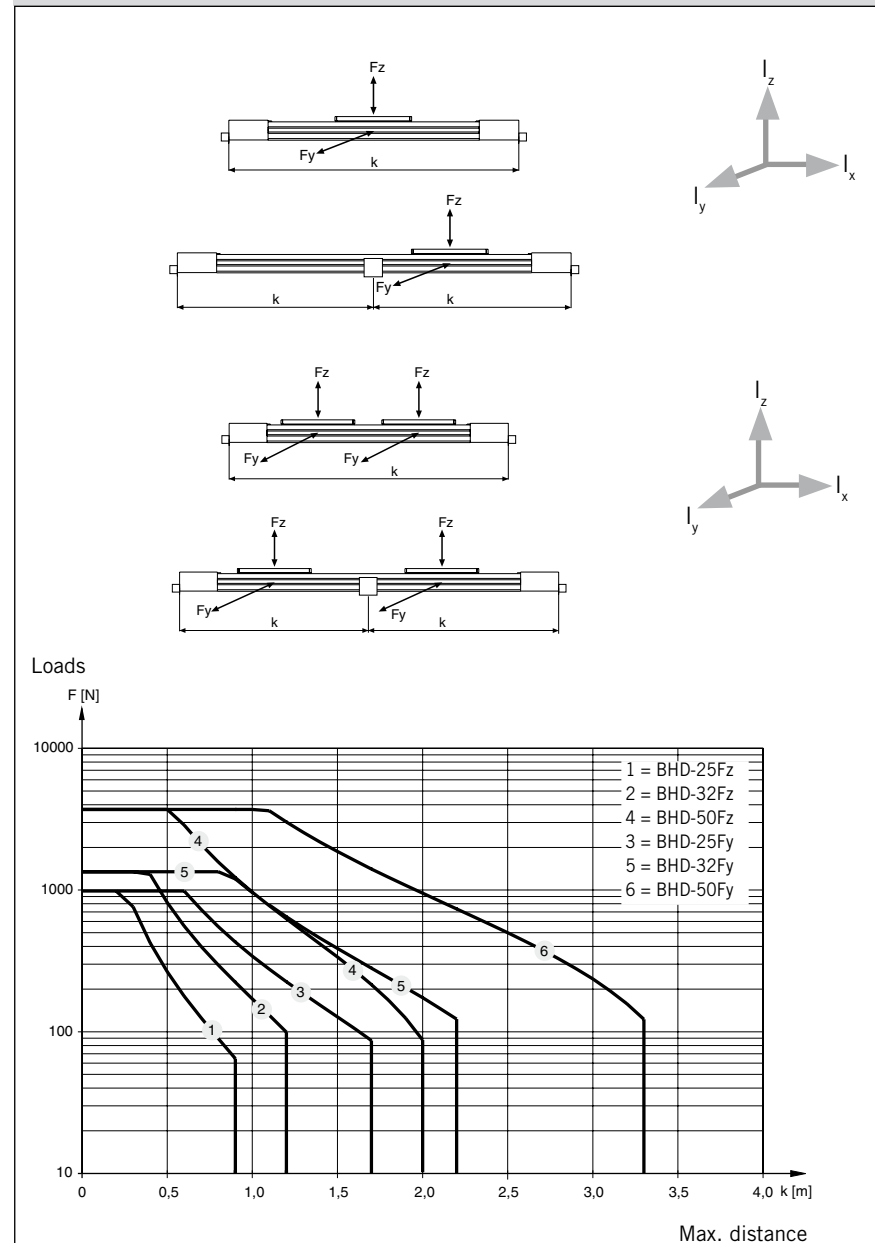

* For the bi-parting version the maximum load (F) complies with the total of the load at both carriers.

$$F = F_{\text{carriage 1}} + F_{\text{carriage 2}}$$

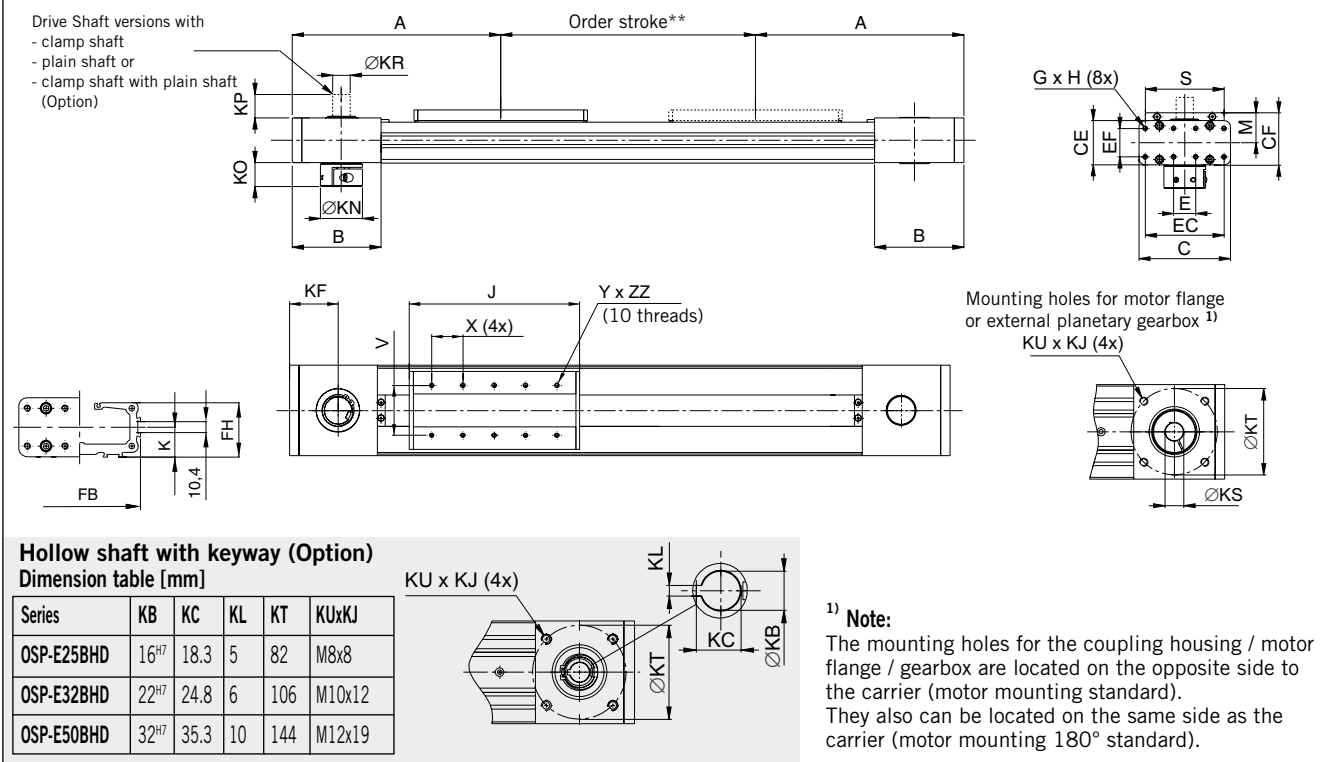

k = Maximum permissible distance between mountings/mid-section support for a given load F.

If the loads are below or up to the curve in the graph the deflection will be max. 0.01 % of distance k.

Maximum Permissible Unsupported Length – Placing of Profile Mounting

OSP-E..BHD Belt Actuator with Integrated Roller Guide – Basic Unit

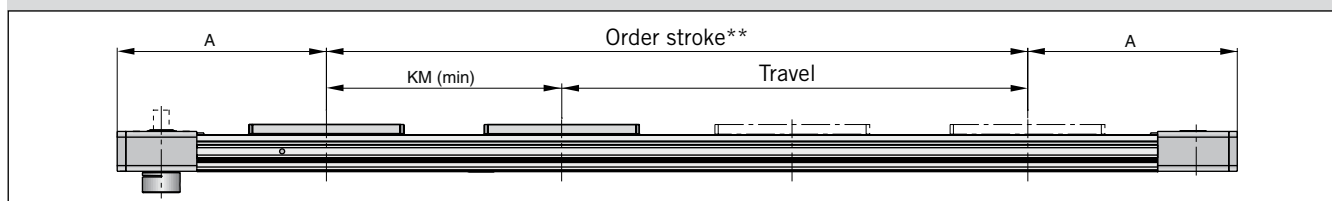

* Note:

The mechanical end position must not be used as a mechanical end stop.
Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm.

Order stroke = required travel + 2 x safety distance.

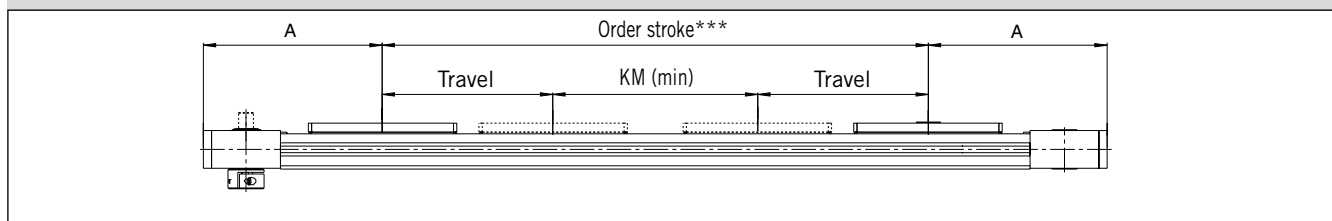

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems.

VERTICAL BELT ACTUATOR WITH INTEGRATED BALL BEARING GUIDE IN MULTI-AXIS SYSTEMS

The OSP-E..BV vertical belt actuator with integrated ball bearing guide has been specially developed for lifting movements in the Z-axis.

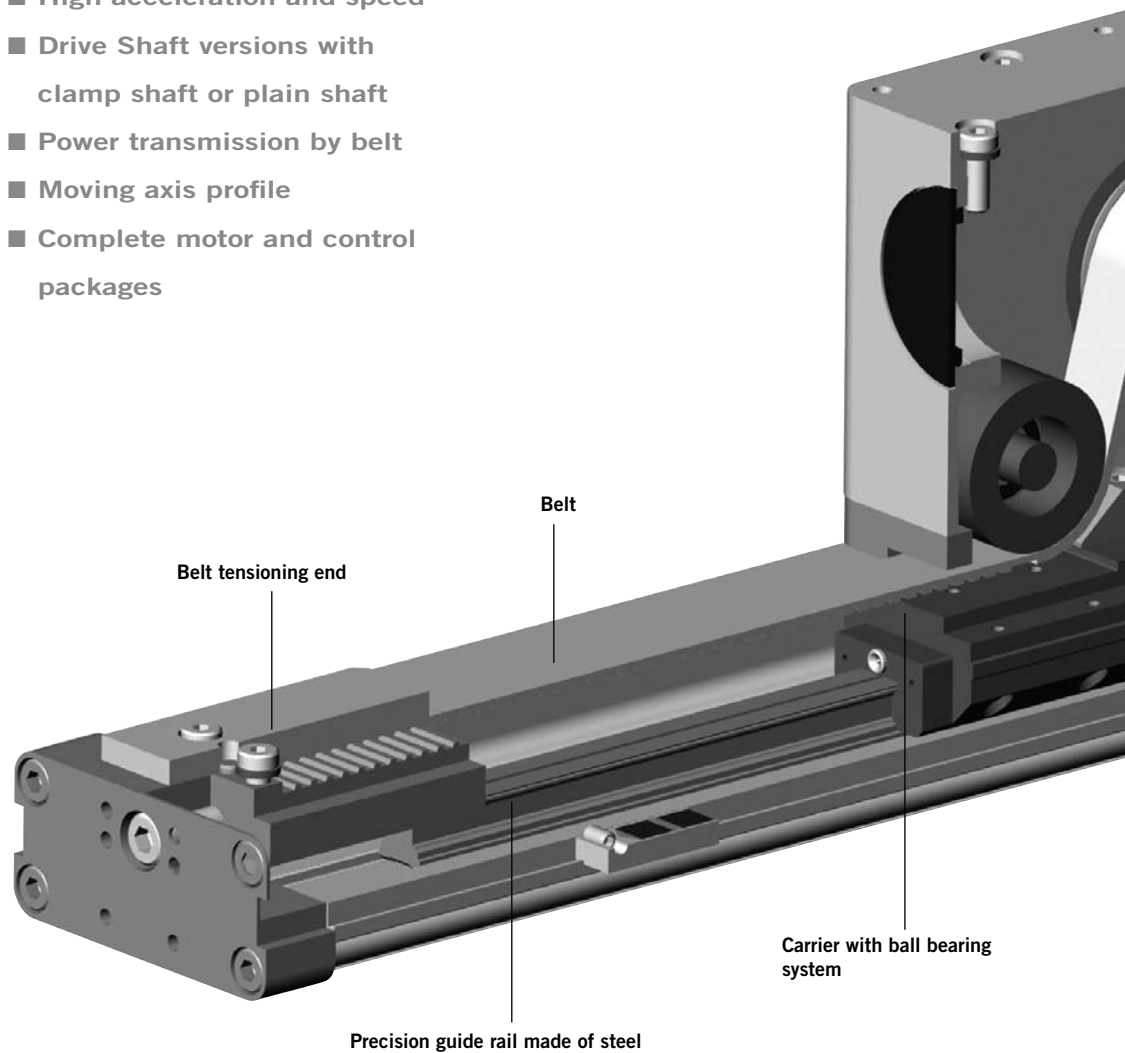

The especially low vibration OSP-E..BV vertical actuator in combination with the heavy duty series OSP-E..BHD meets the highest demands in portal and handling applications.

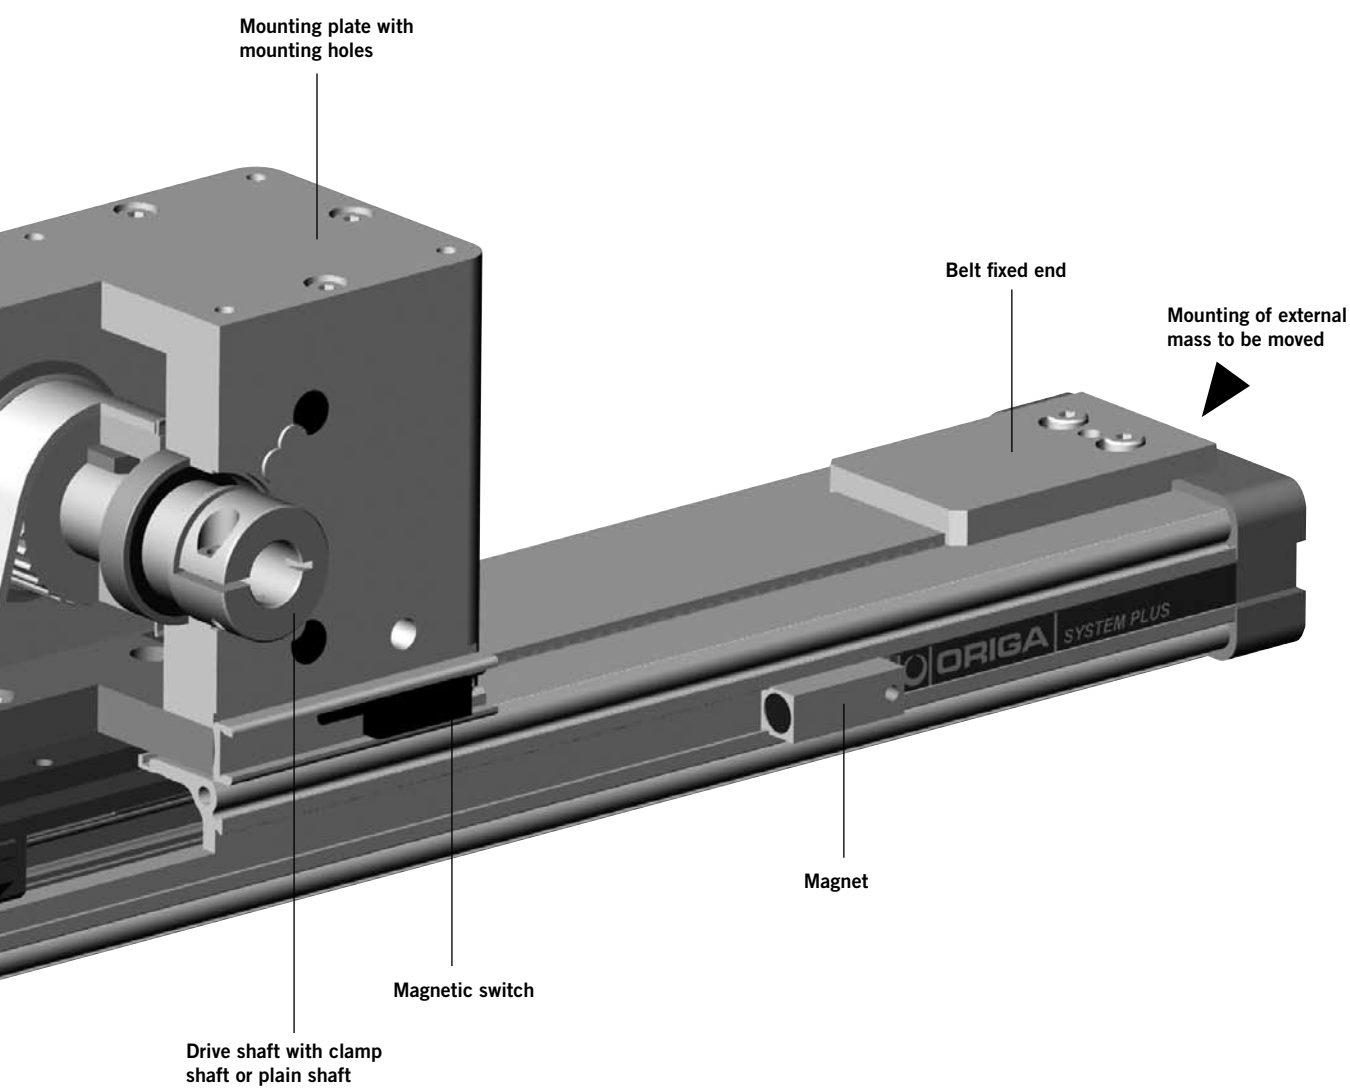

Advantages

- Fixed actuator head for low moving mass
- Integrated ball bearing guide for high bending moments
- Magnetic switch set for contactless position sensing
- Easy to install
- Low maintenance

Features

- High acceleration and speed
- Drive Shaft versions with clamp shaft or plain shaft
- Power transmission by belt
- Moving axis profile
- Complete motor and control packages

Take the easy route and load all the dimensions into your system. The file is suitable for all current CAD systems – available on CD-Rom or at www.parker-origa.com

OPTIONS AND ACCESSORIES

OSP-E..BV, VERTICAL BELT ACTUATOR WITH INTEGRATED BALL BEARING GUIDE

STANDARD VERSION OSP-E..BV

Standard actuator head with clamp shaft or plain shaft and integrated ball bearing guide with two carriers. Choice of side on which gearbox or motor is to be mounted.

Drive Shaft with
Clamp Shaft

Drive Shaft with
Plain Shaft

Drive Shaft with
Clamp Shaft and
Plain Shaft

Drive Shaft with
Double Plain Shaft

OPTIONS

TANDEM

Additional actuator head and two additional carriers for higher bending moments.

HOLLOW SHAFT WITH KEYWAY
For direct connection of gearbox or motor with keyway.

ACCESSORIES

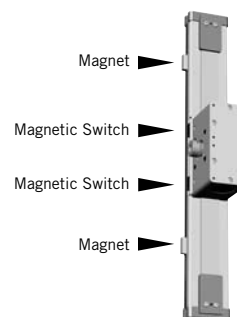

MOTOR MOUNTINGS

For connection of gearbox or motor direct to drive shaft with clamp shaft, or with a motor coupling to drive shaft with plain shaft.

MAGNETIC SWITCHES SET

Magnetic switches with connector, mounting rail and magnets for contactless sensing of the end positions. Cable (suitable for cable chain) can be ordered separately in 5 m, 10 m or 15 m length.

MULTI-AXIS SYSTEMS

For modular assembly of actuators up to multi-axis systems.

OSP-E25BV*	13	2 x 5.3	2.4	4.4	1915	2668	617.5

* Version: Tandem (Option)

Installation Instructions

Make sure that the OSP-E..BV is always operated by motor with holding brake on the actuator side. For the mounting of the external mass to be moved there are threaded holes in the end caps. Before mounting, check the correct centre of gravity distance from the table on Data Sheet.

Mount the external mass on the belt fixed end, so that the belt tension can be checked and adjusted at the belt tensioning end without dismantling.

Maintenance

Depending on operating conditions, inspection of the actuator is recommended after 12 months or 3000 km operation. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

OSP-E..BV

Vertical Belt Actuator with integrated Ball Bearing Guide

Size 20, 25

Standard Version:

- Vertical Belt actuator with integrated ball bearing guide
- Drive shaft with clamp shaft or plain shaft
- Choice of motor mounting side

Options:

- Tandem version for higher moments
- Drive shaft with
 - clamp shaft and plain shaft or double plain shaft
 - hollow shaft with keyway
- Special drive shaft versions on request.

Sizing Performance Overview

Maximum Loadings

Sizing of Actuator

The following steps are recommended:

1. Determination of the lever arm length l_x , l_y and l_z from m_e to the centre axis of the actuator.
2. Calculation of the static and dynamic force F_A which must be transmitted by the belt.

$$F_A = F_g + F_a + F_0$$

$$= m_g \cdot g + m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$$
3. Calculation of all static and dynamic moments M_x , M_y and M_z which occur in the application.
 $M = F \cdot l$
4. Selection of maximum permissible loads via Table T3.
5. Calculation and checking of the combined load, which must not be higher than 1.
6. Checking of the maximum moment that occurs at the drive shaft in Table T2.
7. Checking of the required action force F_A with the permissible load value from Table T1.

For motor sizing, the effective torque must be determined, taking into account the cycle time.

Legend

- l = distance of a mass in the x-, y- and z-direction from the guide [m]
- m_e = external moved mass [kg]
- m_{LA} = moved mass of actuator [kg]
- m_g = total moved mass ($m_e + m_{LA}$) [kg]
- F_A = action force [N]
- M_0 = no-load torque [Nm]
- U_{ZR} = circumference of the pulley (linear movement per revolution) [m]
- g = gravity [m/s²]
- a_{max} = maximum acceleration [m/s²]

Performance Overview				T1
Characteristics	Unit	Description		
Series		OSP-E20BV	OSP-E25BV	
Max. Speed	[m/s]	3.0	5.0	
Linear motion per revolution of drive shaft	[mm/U]	108	160	
Belt		35ATL3	40ATL5	
Max. rpm. drive shaft	[min ⁻¹]	1700	1875	
Max. effective action force F_A at speed	1 m/s	[N]	650	1430
	1 - 2 m/s	[N]	450	1200
	> 3 - 5 m/s	[N]	–	1050
No-load torque ²⁾	[Nm]	0.6	1.2	
Max. acceleration/deceleration	[m/s ²]	20	20

¹⁾ Longer strokes on request and only with profile stiffening

²⁾ As a result of static friction force

³⁾ vertical

Max. Permissible Torque on Drive Shaft Speed / Stroke								T2
OSP-E-20BV				OSP-E-25BV				
Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	
1	19	1	17	1	36	1	36	
2	17	2	10.5	2	30	2	36	
3	15.5			3	30			
				4	28			
				5	27			

Important:

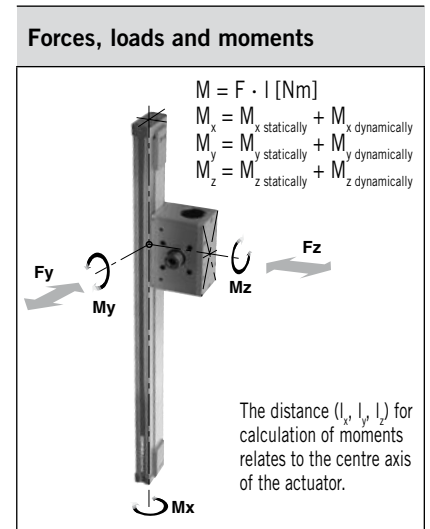

The maximum permissible torque on the drive shaft is the lowest value of the speed- or stroke-dependent torque value.

Example above:

OSP-E25BV required speed $v = 3$ m/s and stroke = 1 m.

Accordingly Table T2 shows permissible moments of 30 Nm for the speed and 36 Nm for the stroke. Therefore the maximum moment at the drive shaft is determined by the speed and must not exceed 30 Nm.

Maximum Permissible Loads T3					
Series	Max. applied load		Max. moments		
	Fy[N]	Fz[N]	Mx[Nm]	My[Nm]	Mz[Nm]
OSP-E20BV	1600	1600	20	100	100
OSP-E25BV	2000	3000	50	200	200

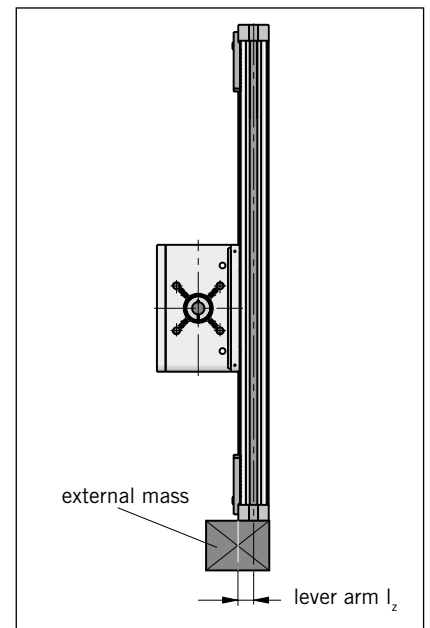

Equation for Combined Loads									
$\frac{F_y}{F_y \text{ (max)}}$	+	$\frac{F_z}{F_z \text{ (max)}}$	+	$\frac{M_x}{M_x \text{ (max)}}$	+	$\frac{M_y}{M_y \text{ (max)}}$	+	$\frac{M_z}{M_z \text{ (max)}}$	≤ 1

The total of the loads must not exceed >1 under any circumstances.

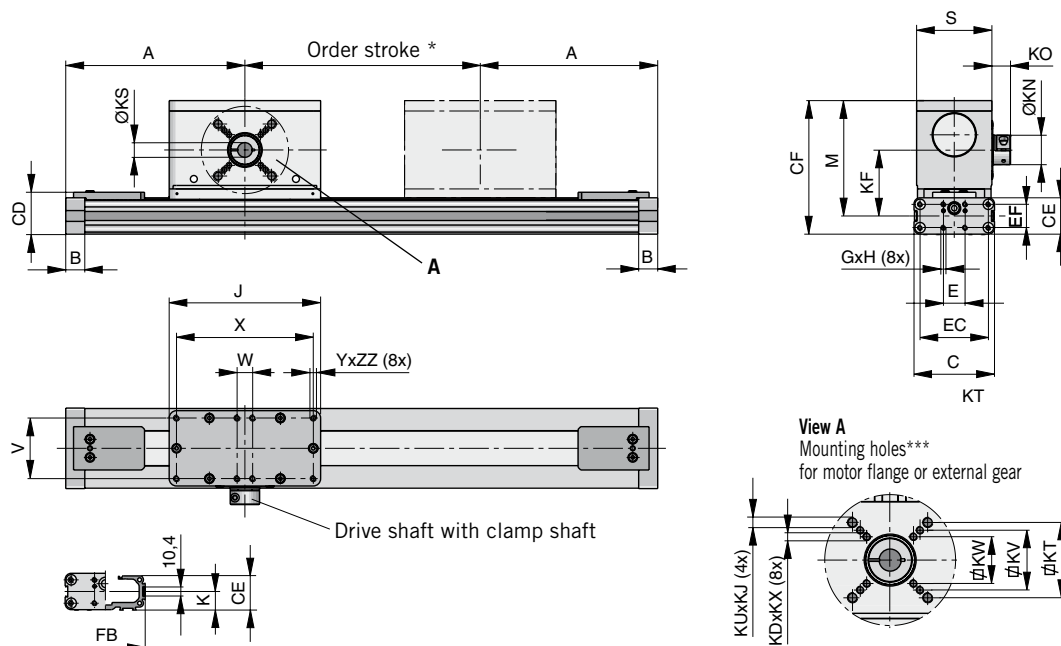

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here. The maximum permissible loads must not be exceeded.

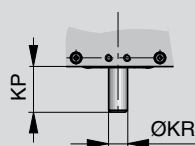

Distance of Centre of Gravity of External Mass from Mid-Point of Actuator				
Mass [kg]	OSP-E20BV		OSP-E25BV

OSP-E..BV Vertical Belt Actuator with integrated Ball Bearing Guide – Basic Unit

Plain shaft

Hollow shaft with keyway (Option)

Series	ØKB	KC	KL	KP	ØKR
OSP-E22BV	12 ^{H7}	13.8	4	28.5	12 _{h7}
OSP-E25BV	16 ^{H7}	18.3	5	31.5	16 _{h7}

* Note:

The mechanical end position must not be used as a mechanical end stop.

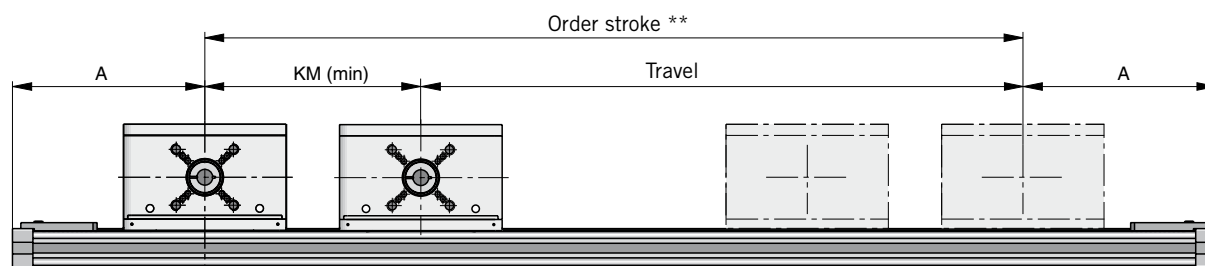

Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm.

Order stroke = required travel + 2 x safety distance.

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems.

For further information please contact your local Parker Origa representative.

Option – Tandem

** Order stroke = required travel + KM min + 2 x safety distance.

*** The mounting holes for the coupling housing are on the motor-mounting side. Therefore please ensure that the motor-mounting side is correctly stated when ordering the actuator.

(For special drive shafts, other dimensions for KS and KB are available on request – see Order Instructions.)

Dimensions

The magnetic switches and magnets can be mounted on either sides

Dimension table [mm]

Series	MA	MB	MC	MD
OSP-E20BV	46	23.7	42.3	35
OSP-E25BV	56	26.0	51.0	35

Contactless Position Sensing with Magnetic Switches

The magnetic switch set, comprising two magnetic switches, a mounting rail and two magnets, is for contactless sensing of the end positions. The mounting rail and magnetic switches are mounted on the actuator head and the magnets are mounted in the dovetail slot on the profile.

The magnetic switches are the RST-S type (connector version).

For the connecting cable

Parker Origa recommends the use of cable suitable for cable chain.

Belt Actuator with Internal Plain Bearing Guide

Contents

Description	Page
Overview	40
Technical Data	43
Dimensions	48
Order Instructions	50

BELT ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE FOR POINT-TO-POINT APPLICATIONS

A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

Advantages

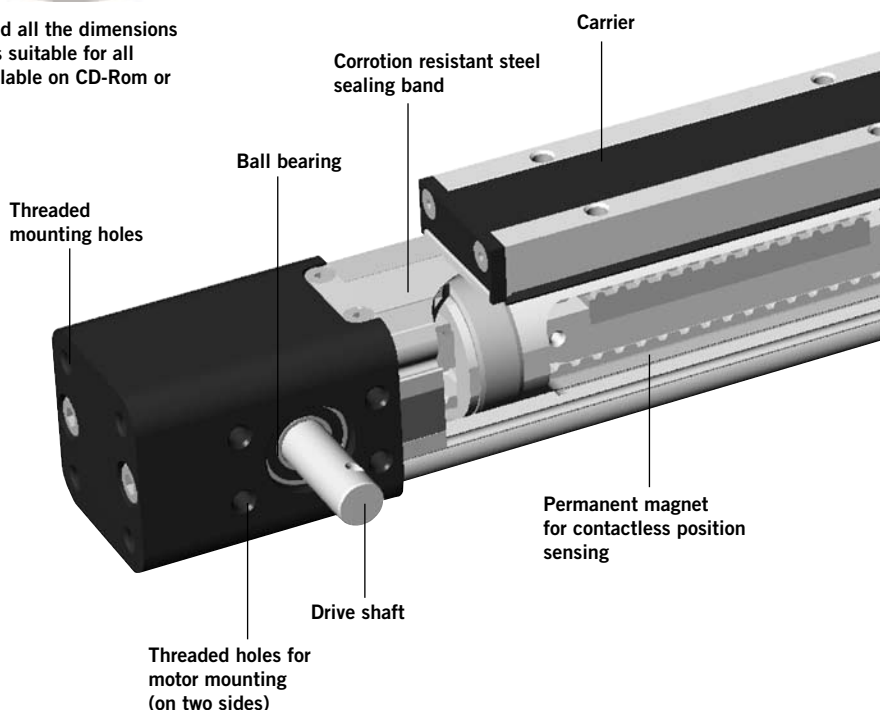

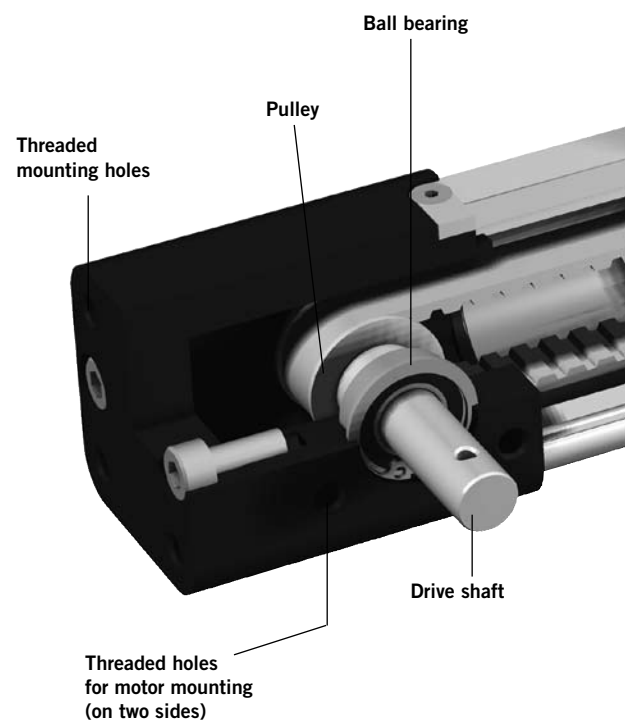

- Precise path and position control
- High speed operation
- Easy installation
- Low maintenance
- Ideal for precise point-to-point applications

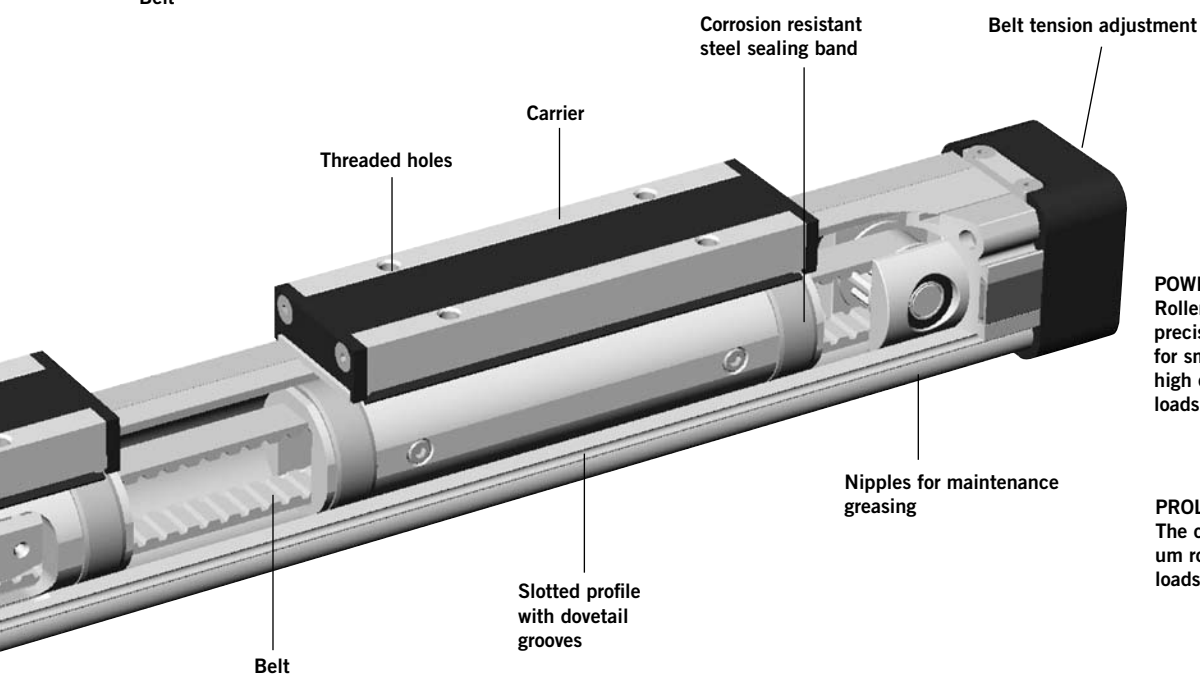

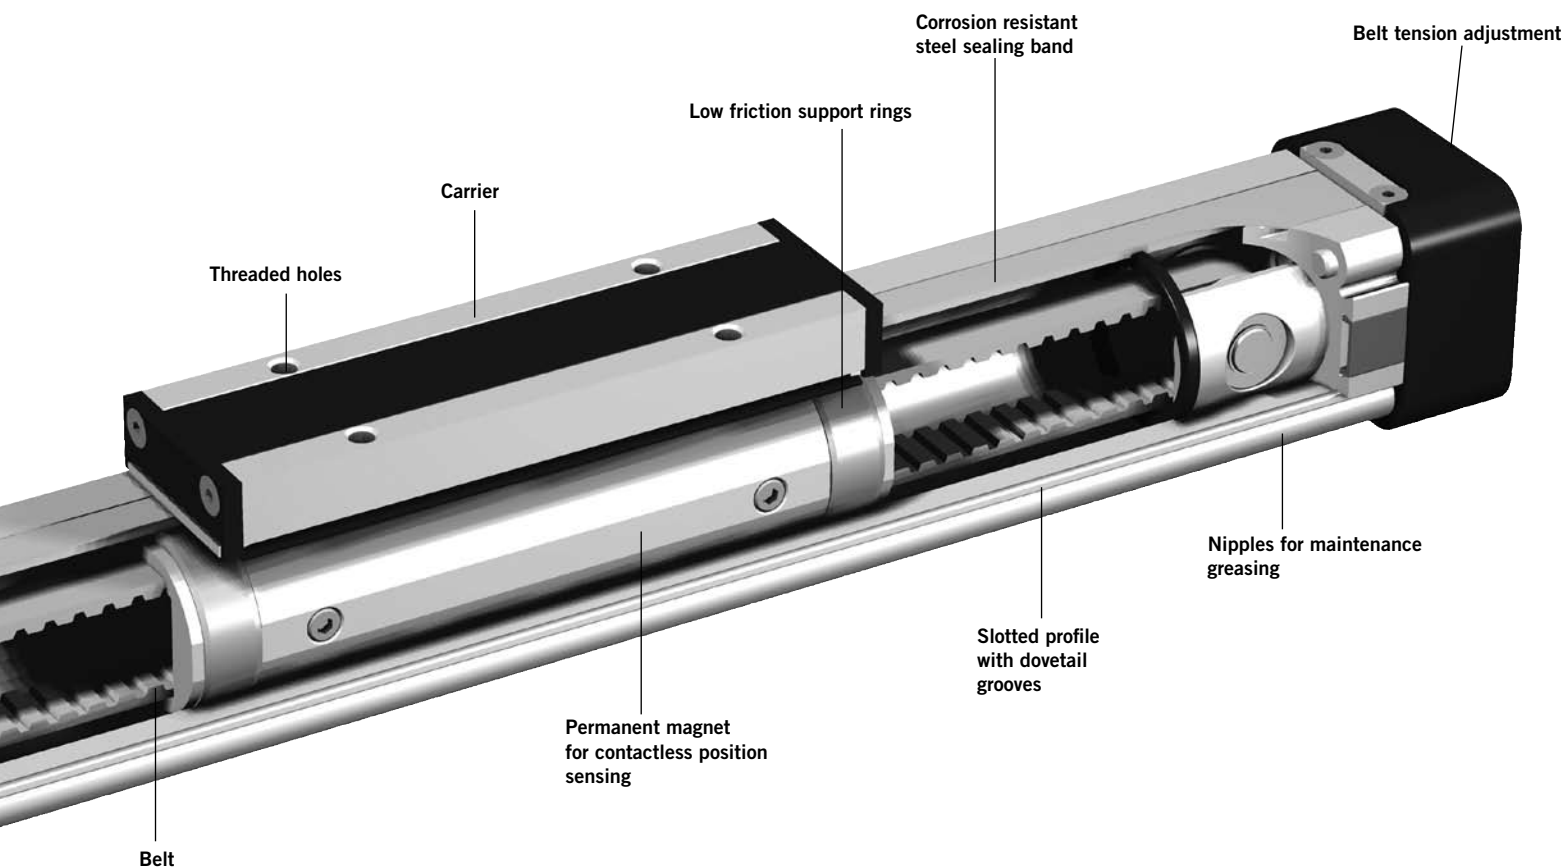

Features

- Integrated drive and guidance system
- Tandem configuration with increased carrier distance for higher moment supports
- Long available strokes
- Complete motor and control packages
- Diverse range of accessories and mountings
- Bi-parting and special options available

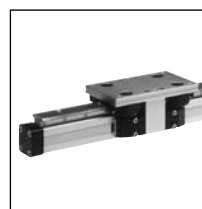

Take the easy route and load all the dimensions into your system. The file is suitable for all current CAD systems – available on CD-Rom or at www.parker-origa.com

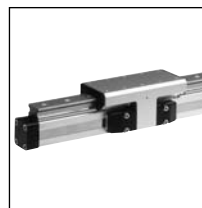

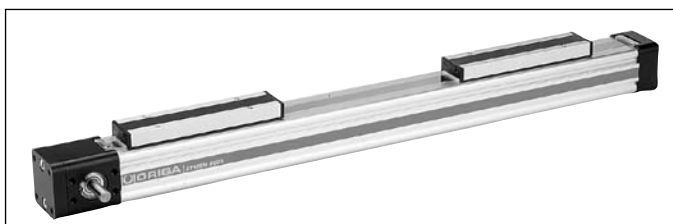

POWERSLIDE
Roller bearing
precision guidance
for smooth travel and
high dynamic or static
loads.

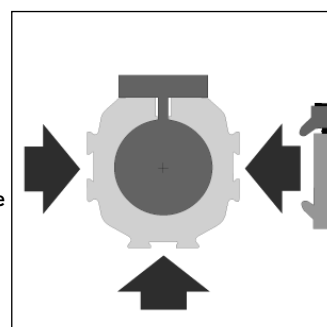

PROLINE
The compact aluminium
roller guide for high
loads and velocities.

Tandem configuration with increased carrier distance for higher moment supports.
Bi-parting version for precise synchronized movements

The dovetailed mounting rails of the new actuator expand its function into that of a universal system carrier.
Modular system components are simply clamped on.

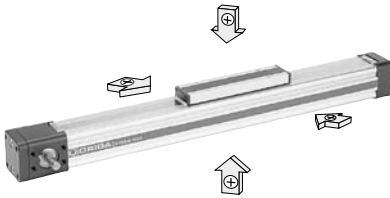

OPTIONS AND ACCESSORIES

OSP-E..B BELT ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE

STANDARD VERSIONS OSP-E..B

Carrier with internal guidance and magnet packet for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

DRIVE SHAFT VERSIONS

- Plain shaft or
- double plain shaft (Option)
e.g. to drive two actuators in parallel.

OPTIONS

TANDEM

For higher moment support.

BI-PARTING

For perfectly synchronised bi-parting movements.

ACCESSORIES

MOTOR MOUNTING

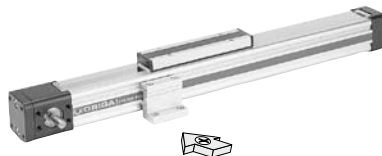

END CAP MOUNTING

For end-mounting of the actuator.

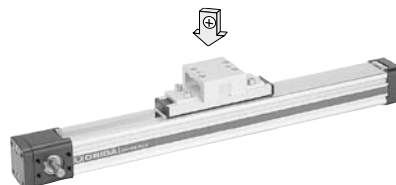

PROFILE MOUNTING

For supporting long actuators or mounting the actuator on the dovetail grooves.

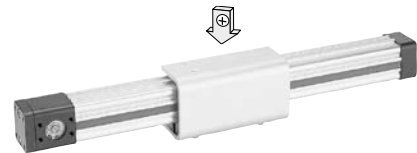

CLEVIS MOUNTING

Carrier with tolerance and parallelism compensation to drive external linear guides.

INVERSION MOUNTING

The inversion mounting, mounted on the carrier, transfers the driving force to the opposite side, e.g. for dirty environments.

MAGNETIC SWITCHES SERIES RST AND EST

For contactless position sensing of end stop and intermediate carrier positions.

Characteristics			
Characteristics	Symbol	Unit	Description

Installation			See table
Material	Slotted profile		Extruded anodized aluminium
	Belt		Steel-corded polyurethane
	Pulley		Aluminium
	Guide bearings		Low friction plastic
	Sealing band		Hardened corrosion resistant steel
	Screws, nuts		Zinc plated steel
	Mountings		Zinc plated steel and aluminium
Encapsulation class	IP	54	

Weight (mass) and Inertia					
Series	at stroke 0 m	Weight (mass) [kg]		Inertia [$\times 10^{-6}$ kgm ²]	
		ad per meter stroke	moving mass	at stroke 0 m	ad per meter stroke
OSP-E25B	0.9	1.6	0.2	25.3	6.6
OSP-E32B	1.9	3.2	0.40	43.3	10
OSP-E50B	5.2	6.2	1.0	312.2	45
OSP-E25B*	1.2	1.6	0.5	48	6.6
OSP-E32B*	2.3	3.2	0.8	83	10
OSP-E50B*	6.3	6.2	2.1	585	45

* Version: Tandem and Bi-parting (Option)

Installation Instructions

Use the threaded holes in the end cap for mounting the actuator. See if Profile Mountings are needed using the maximum allowable unsupported length graph on page 45. At least one end cap must be secured to prevent axial sliding when profile mounting is used. When the actuator is moving an externally guided load, the compensation must be used.

The actuators can be fitted with the standard carrier mounting facing in any direction.

To prevent contamination such as fluid ingress, the actuator should be fitted with its sealing band facing downwards. The inversion mounting can be fitted to transfer the driving force to the opposite side.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker Origa recommends a check and lubrication of the actuator, and if necessary a change of the belt and wear parts, after an operation time of 12 months of operation or 3 000 km travel of distance. Additional greasing is easily done by using nipples in the slotted profile. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

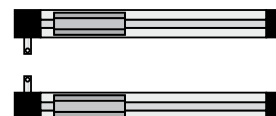

OSP-E..B Belt Actuator with internal Plain Bearing Guide

Size 25, 32, 50

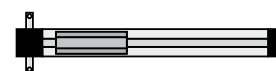

Standard Versions:

- Standard carrier with internal plain bearing guide
- Dovetail profile for mounting of accessories and the actuator itself
- Position of Drive Shafts

Options:

- Tandem-Version
- Bi-parting version for synchronized movements
- Drive shaft with double plain shaft

Sizing Performance Overview

Maximum Loadings

Sizing of Actuator

The following steps are recommended for selection:

1. Required acceleration,
2. Required torque is shown on page 46 and 47.
3. Check that maximum values in the table 3 are not exceeded
4. Drive shaft by using table T2. (Pay attention to note under table) If value is lower than required, overview the moving profile or select if possible a bigger unit.
5. Before sizing and specifying the motor, the average torque must be calculated using the cycle time of the application.
6. Check that the maximum allowable unsupported length is not exceeded (see on page 45).

Performance Overview				
Characteristics	Unit	Description		
Size		OSP-E25B	OSP-E32B	OSP-E50B
Max. speed	[m/s]	2	3	5
Linear motion per revolution, drive shaft	[mm]	60	60	100
Max. rpm drive shaft	[min ⁻¹]	2 000	3 000	3 000
Max. effective < 1 m/s:	[N]	50	150	425
action force 1- 2 m/s:	[N]	50	120	375
F _A at speed > 2 m/s:	[N]	–	100	300
No-load torque	[Nm]	0.4	0.5	0.6
Max. acceleration/deceleration	[m/s ²]	10	10	10
Repeatability	[mm/m]	±0.05	±0.05	±0.05
Max. stroke length OSP-E..B	[mm]	3000	5000	5000
Max. stroke length OSP-E..B*	[mm]	2 x 1500	2 x 2500	2 x 2500

* Bi-parting version

Maximum Permissible Torque on Drive Shaft Speed / Stroke											T2
OSP-E25B				OSP-E32B				OSP-E50B			
Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]
1	0.9	1	0.9	1	2.3	1	2.3	1	10.0	1	10.0
2	0.9	2	0.9	2	2.0	2	2.3	2	9.5	2	10.0
		3	0.9	3	1.8	3	2.3	3	9.0	3	9.0
						4	2.3	4	8.0	4	7.0
						5	1.8	5	7.5	5	6.0

Important:

The maximum permissible torque on the drive shaft is the lowest value of the speed- or stroke-dependent torque value.

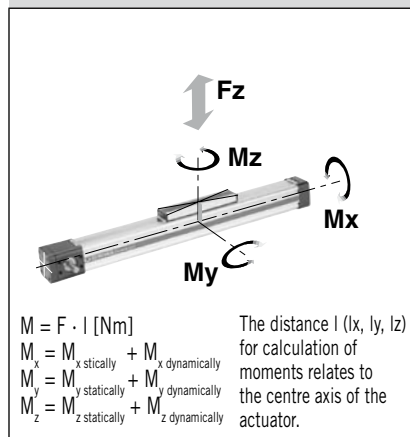

Example above:

OSP-E32B stroke 2 m, required speed 3 m/s;

From table T2: speed 3 m/s gives 1.8 Nm and stroke 2 m gives 2.3 Nm.

Max. torque for this application is 1.8 Nm.

Forces, loads and moments

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.

The maximum permissible loads must not be exceeded.

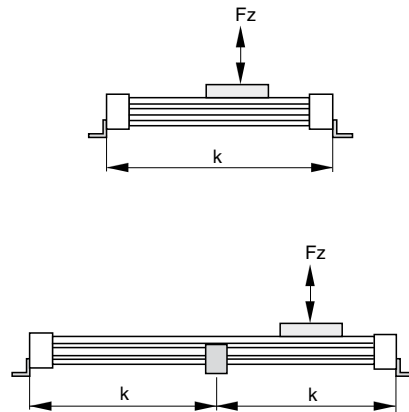

Maximum Permissible Loads					T3
Series	Max. applied load Fz [N]	Max. moments [Nm]			
		Mx	My	Mz	
OSP-E25B	160	2	12	8	
OSP-E32B	300	8	25	16	
OSP-E50B	850	16	80	32	
OSP-E..B Bi-partional	The maximum load F must be equally distributed among the two carriers.				

Equation for Combined Loads							
$\frac{F_z}{F_z \text{ (max)}}$	+	$\frac{M_x}{M_x \text{ (max)}}$	+	$\frac{M_y}{M_y \text{ (max)}}$	+	$\frac{M_z}{M_z \text{ (max)}}$	≤ 1

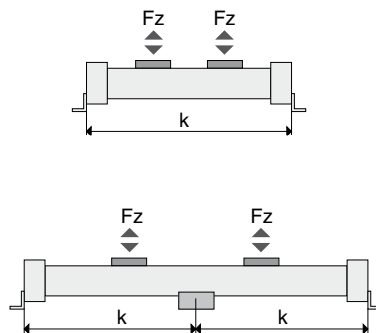

The total of the loads must not exceed >1 under any circumstances.

Maximum permissible unsupported length – Placing of Profile Mounting

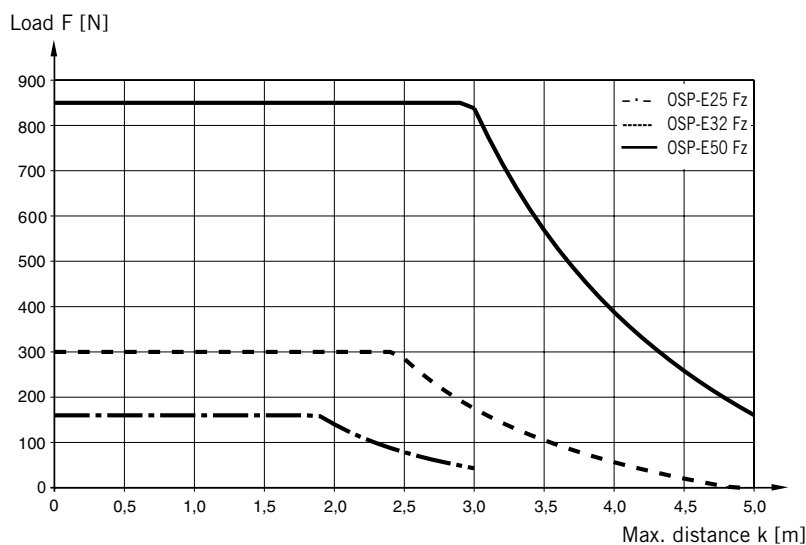

Series OSP-E..B

Series OSP-E..B Bi-parting version

k = Maximum permissible distance between mountings/mid-section support for a given load F.

(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k)

Maximum Permissible Unsupported Length

Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to max.

OSP-E25B: 3 m / 2 x 1.5 m *

OSP-E32B: 5 m / 2 x 2.5 m *

OSP-E50B: 5 m / 2 x 2.5 m *

* Version: Bi-partional

Other stroke lengths are available on request.

The end of stroke must not be used as a mechanical stop.

Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft.

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems.

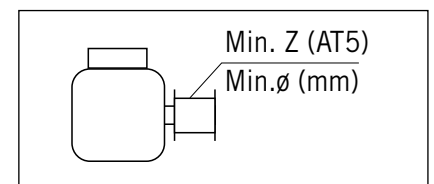

For advise, please contact your local Parker Origa technical support department.

Mounting on the Drive Shaft

Do not expose the drive shaft to uncontrolled axial or radial forces when mounting coupler or pulley, a steadying block should be used.

Pulley

Minimum allowable number of teeth Z (AT5) at maximum applied torque.

Series	Min. Z	Min. ø
OSP-E25B	24	38
OSP-E32B	24	38
OSP-E50B	36	57

Required Acceleration

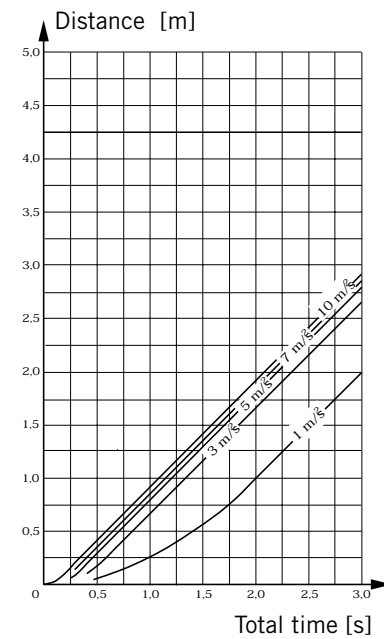

Distance / Time Graph

Using the required travel distance and total time, the adjacent graphs show the required acceleration based on maximum speed.

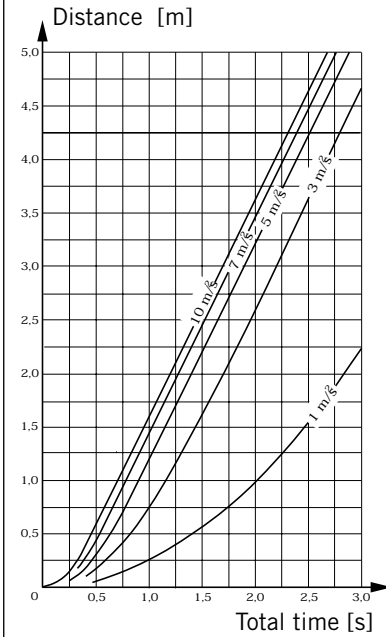

The graphs assume that acceleration and deceleration are equal.

Please note that specifying non-essential high acceleration or short cycle time will result in an oversized motor.

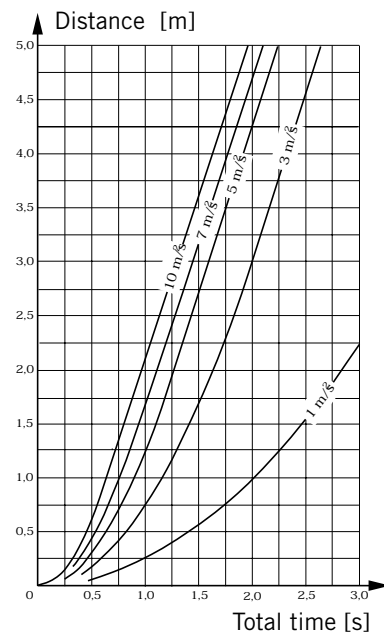

Max. speed 1 m/s

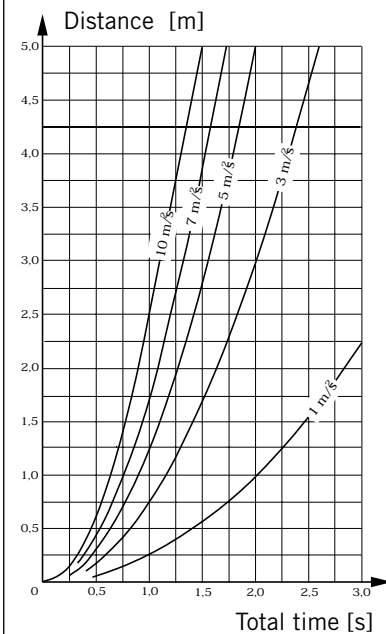

Max. speed 2 m/s

Max. speed 3 m/s

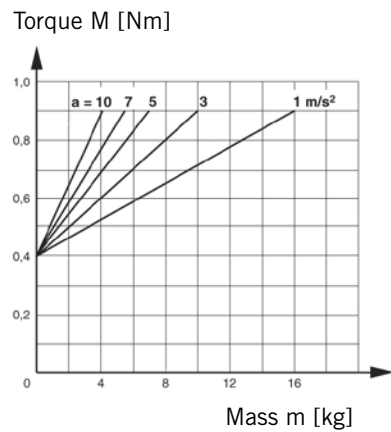

Max. speed 5 m/s

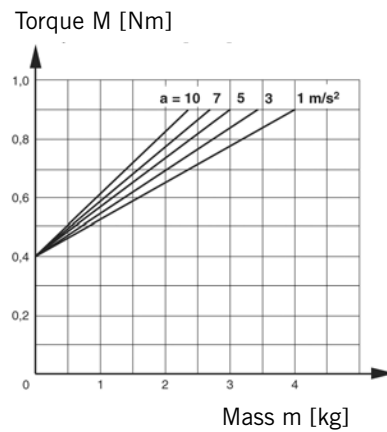

Required Torque / Mass

**Size OSP-E25B,
Horizontal Application**

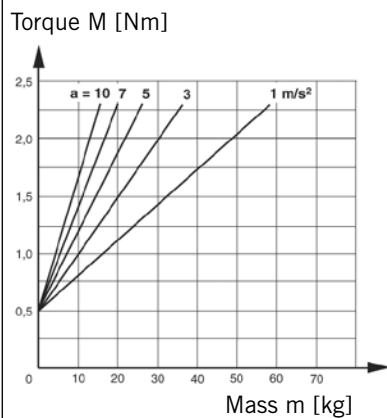

**Size OSP-E25B,
Vertical Application**

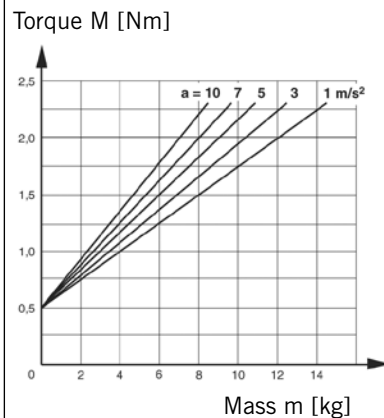

Using the known mass, the direction of the application and the required acceleration from the distance-time graphs, the actuator can be sized and the required torque is shown in the adjacent graphs. Mass in graphs = Load + moving mass of the actuator (according to the weight chart on data sheet 43 ff).

**Size OSP-E32B,
Horizontal Application**

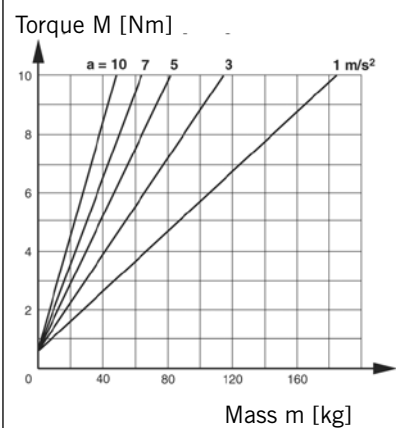

**Size OSP-E32B,
Vertical Application**

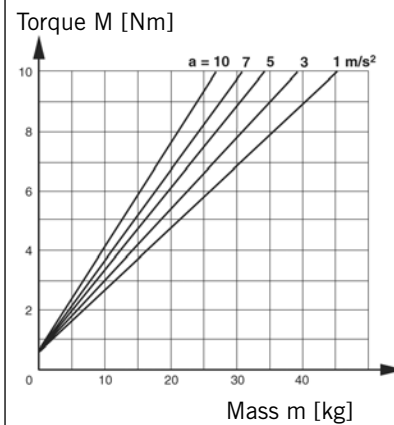

Please note:

When using an additional guide, please add the mass of the carriage to the total moving mass.

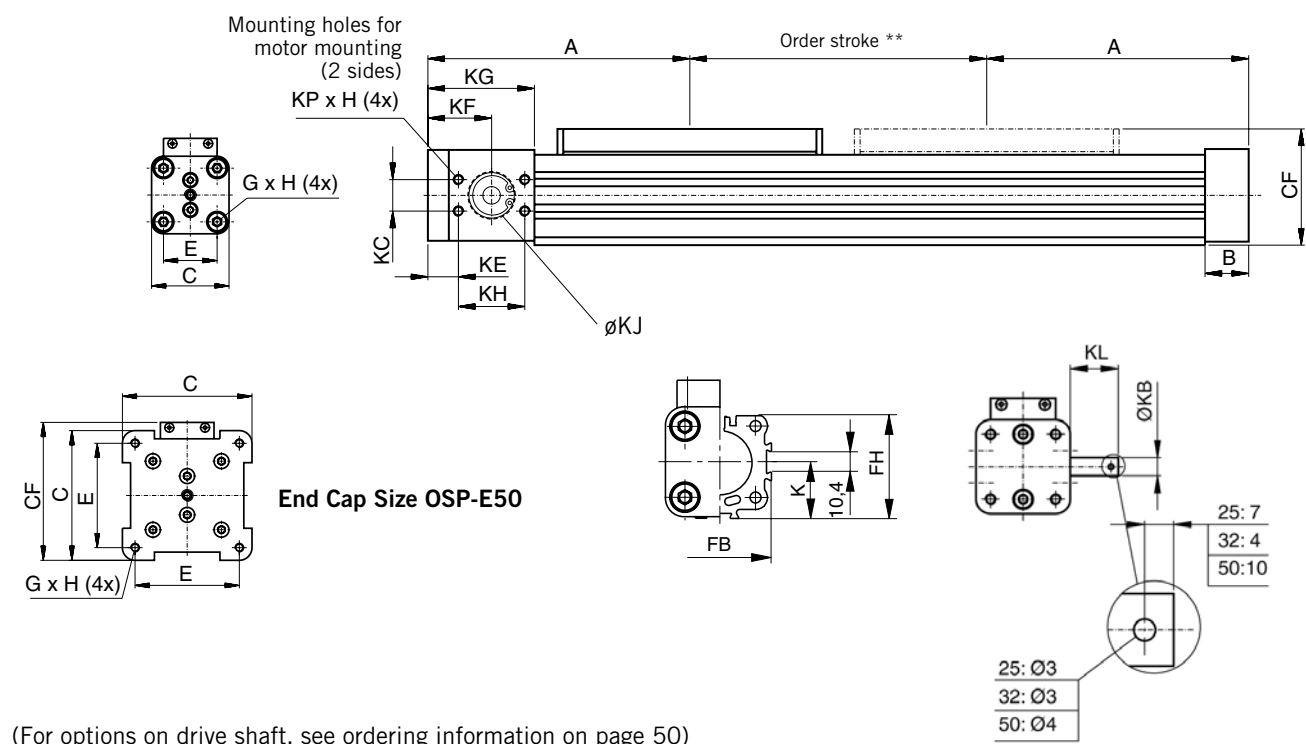

**Size OSP-E50B,
Horizontal Application**

**Size OSP-E50B,
Vertical Application**

OSP-E..B Belt Actuator with Internal Plain Bearing Guide- Basic Unit

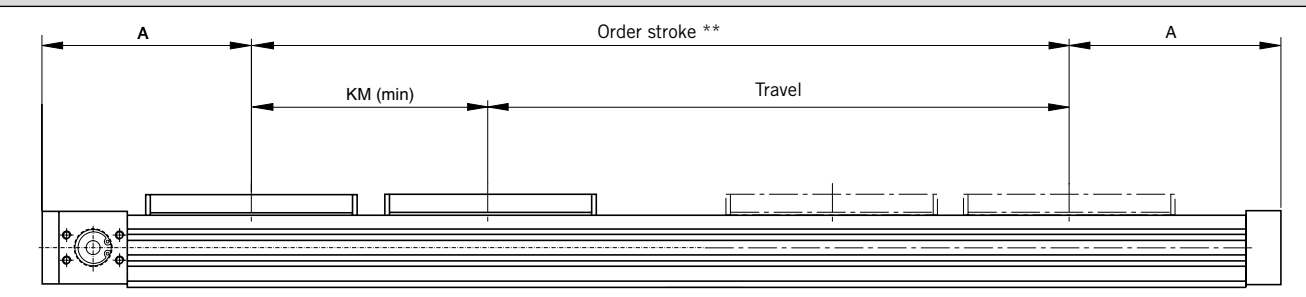

* Note:

The mechanical end position must not be used as a mechanical end stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm.

Order stroke = required travel + 2 x safety distance.

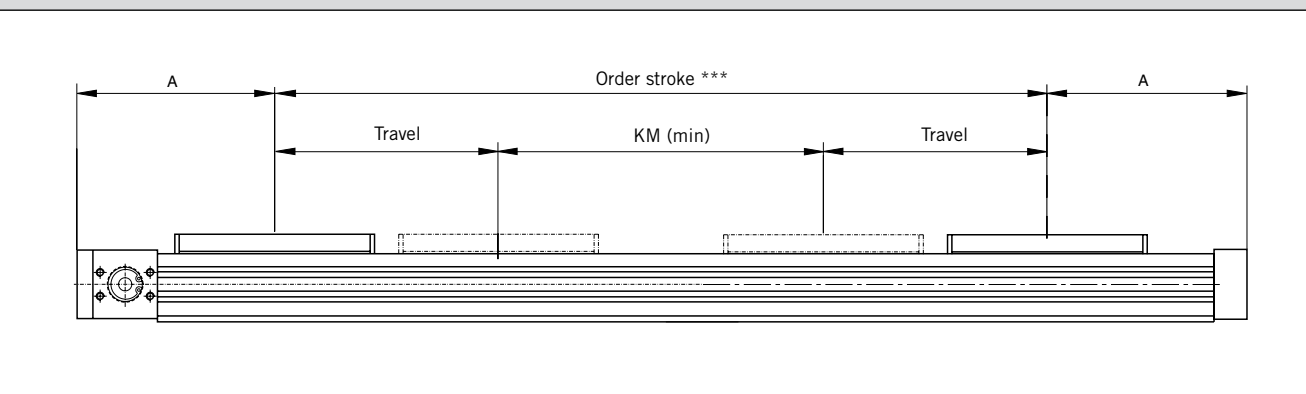

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems.
For further information please contact your local Parker Origa representative.

Option – Tandem

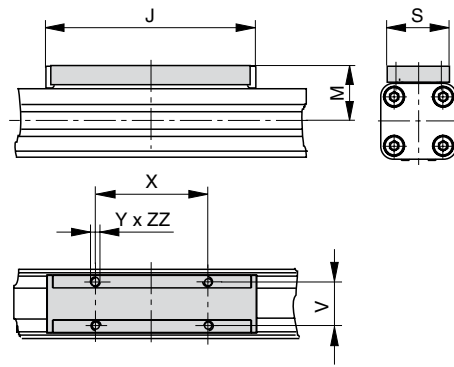

** Order stroke = required travel + KM min + 2 x safety distance

Option – Bi-parting

*** Order stroke = 2 x required travel + KM min + 2 x safety distance

Ball Screw Actuator with Internal Plain Bearing Guide

Contents

Description	Page
Overview	54
Technical Data	57
Order instructions	64, 65

BALL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE FOR HIGH ACCURACY APPLICATIONS

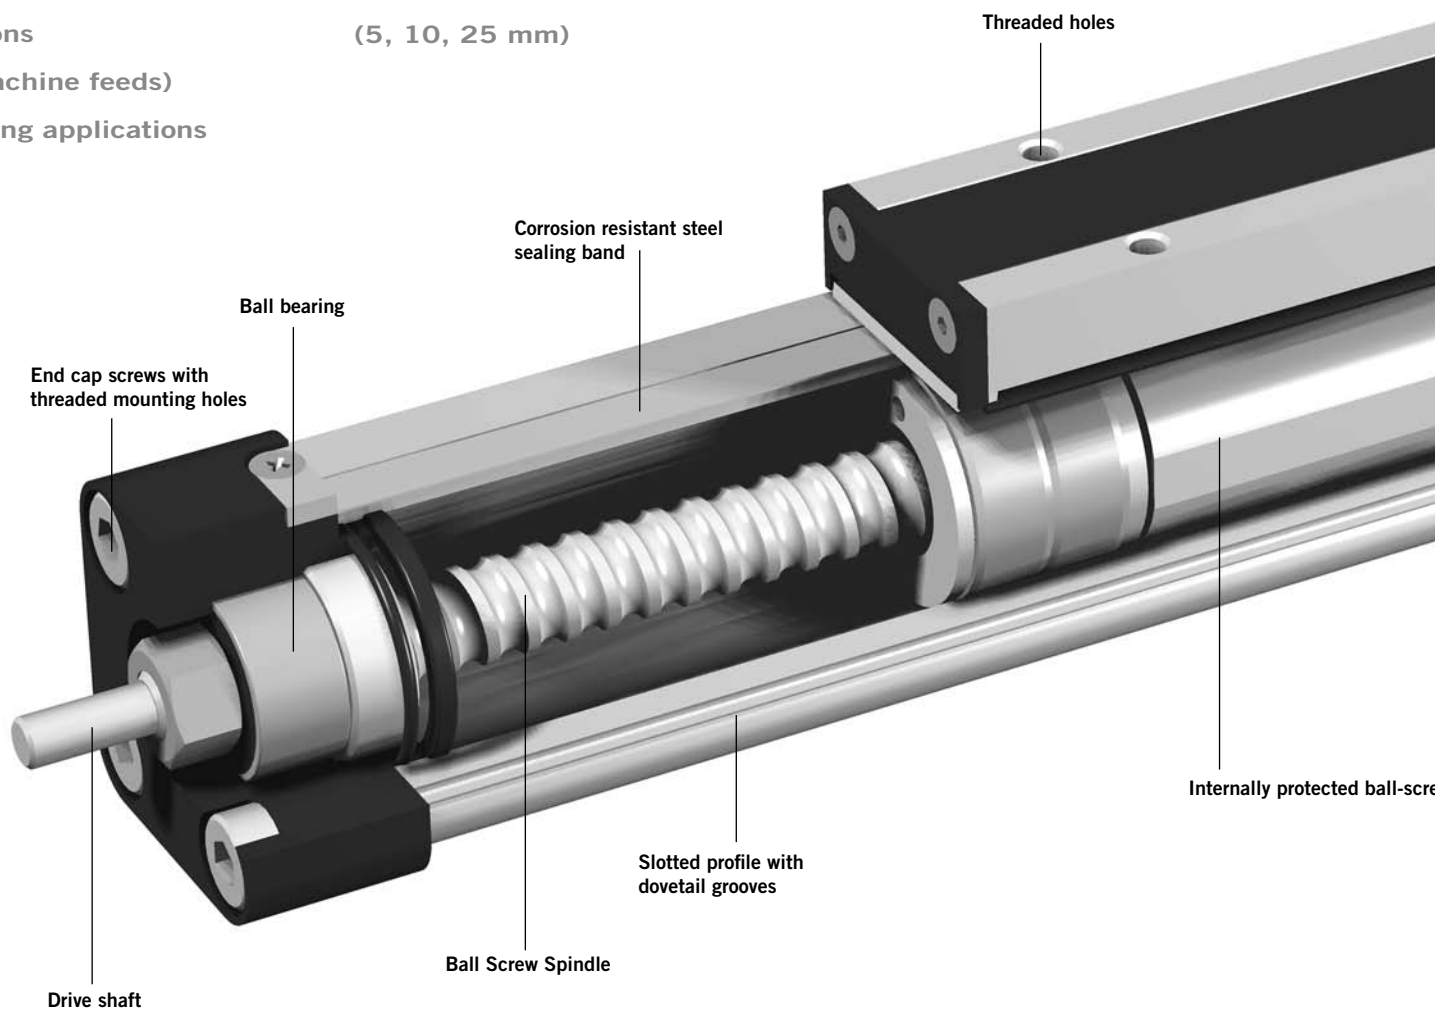

A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

Advantages

- Accurate path and position control
- High force output
- Easy installation
- Excellent slow speed characteristics
- Ideal for precise traverse operations (e.g. machine feeds) and lifting applications

Features

- Integrated drive and guidance system
- Complete motor and control packages
- Diverse range of accessories and mountings
- Optimal screw pitches (5, 10, 25 mm)

Clean Room-Version
certified to DIN EN ISO 14644-1

SLIDELINE
Combination with
linear guides
provides for heavier
loads.

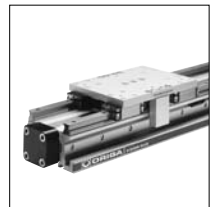

POWERSLIDE
Roller bearing
precision guidance
for smooth travel and
high dynamic or static
loads.

PROLINE
The compact
aluminium roller
guide for high loads
and velocities.

Heavy Duty guide HD
linear guides for heavy
duty applications

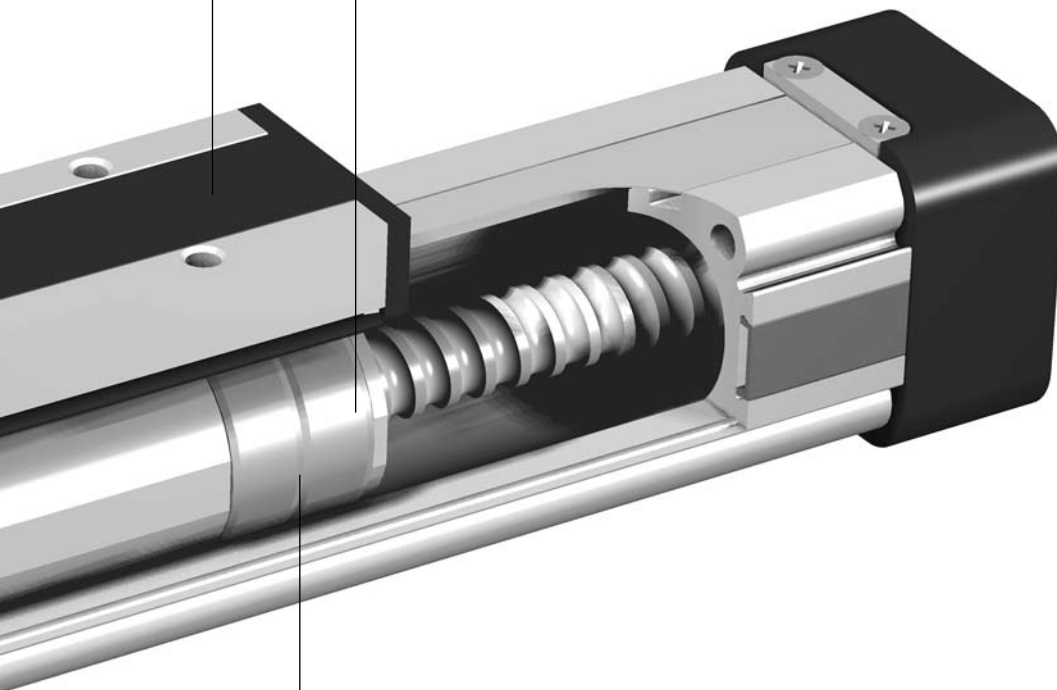

SFI-plus
displacement
measuring system

Low friction support rings

Carrier

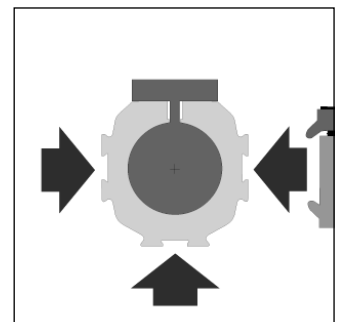

Permanent magnet for
contactless sensing

Take the easy route and load all the dimensions into your system. The file is suitable for all current CAD systems – available on CD-Rom or at www.parker-origa.com

ew nut

The dovetailed mounting rails of the new actuator expand its function into that of a universal system carrier. Modular system components are simply clamped on.

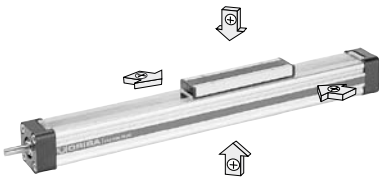

OPTIONS AND ACCESSORIES

OSP-E..SB

BALL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE

STANDARD VERSION OSP-E..SB

Standard carrier with internal guidance and integrated magnet set for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

BALL SCREW PITCH

The ball screws spindles are available in various pitches:

OSP-E25SB: 5 mm

OSP-E32SB: 5, 10 mm

OSP-E50SB: 5, 10, 25 mm

OPTIONS

TANDEM

For higher moment support.

CLEAN ROOM

certified to DIN EN ISO 14644-1

ACCESSORIES

MOTOR MOUNTINGS

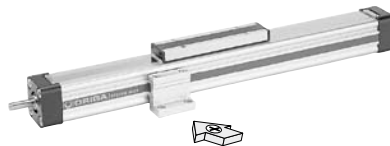

END CAP MOUNTING

For end-mounting of the actuator.

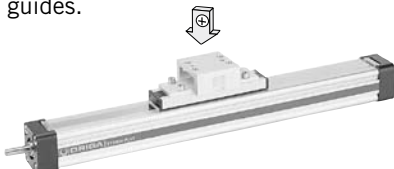

PROFILE MOUNTING

For supporting long actuators or mounting the actuator on the dovetail grooves.

CLEVIS MOUNTING

Carrier with tolerance and parallelism compensation to drive external linear guides.

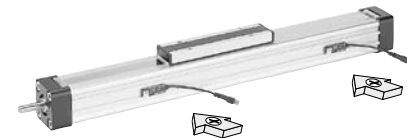

INVERSION MOUNTING

The inversion mounting, mounted on the carrier, transfers the driving force to the opposite side, e.g. for dirty environments.

MAGNETIC SWITCHES SERIES RST AND EST

For contactless position sensing of end stop and intermediate carrier positions.

MEASURING SYSTEM - SFI-PLUS

Incremental measuring system with practically relevant resolution.

OSP-E..SB

Ball Screw Actuator

with internal Plain Bearing Guide

Size 25, 32, 50

Characteristics			
Characteristics	Symbol	Unit	Description
General Features			
Series			OSP-E..SB
Name			Ball Screw Actuator with internal Plain Bearing Guide
Mounting			See drawings
Temperature Range	ϑ_{\min} ϑ_{\max}	°C °C	-20 +80
Weight (mass)		kg	See table
Installation			In any position
Material	Slotted profile		Extruded anodized aluminium
	Ball screw		Hardened steel
	Ball screw nut		Hardened steel
	Guide bearings		Low friction plastic
	Sealing band		Hardened, corrosion resistant steel
	Screws, nuts		zinc plated steel
	Mountings		zinc plated steel and aluminium
Encapsulation class		IP	54

Weight (mass) and Inertia					
Series	At stroke 0 m	Weight (mass) [kg]		Inertia [$\times 10^{-6}$ kgm ²]	
		Add per metre stroke	Moving mass	At stroke 0 m	Add per metre
OSP-E25SB	0.8	2.3	0.2	2.2	11.3
OSP-E32SB	2.0	4.4	0.4	8.4	32
OSP-E50SB	5.2	9.4	1.2	84	225

Installation Instructions

Use the threaded holes in the free end cap and a Profile Mounting close to the motor end for mounting the actuator.

See if Profile Mountings are needed using the maximum permissible unsupported length graph on page 59. At least one end cap must be secured to

prevent axial sliding when Profile Mounting is used.

When the actuator is moving an externally guided load, the Compensation must be used (see page 109).

The actuators can be fitted with the standard carrier mounting facing in any direction.

To prevent contamination such as fluid ingress, the actuator should be fitted with its sealing band facing downwards.

The inversion mounting can be fitted to transfer the driving force to the opposite side.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker Origa recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 3000 km travel of distance. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

Standard Versions:

- Standard carrier with internal plain bearing guide
- Dovetail profile for mounting of accessories and the actuator itself
- Pitches of Ball Screw Spindle
Type OSP-E25 : 5 mm
Type OSP-E32: 5 , 10 mm
Type OSP-E50: 5 , 10, 25 mm

Options:

- Tandem-Version
- Clean room-version, according to DIN EN ISO 14644-1
- Displacement Measuring System SFI-plus

Sizing Performance Overview

Maximum Loadings

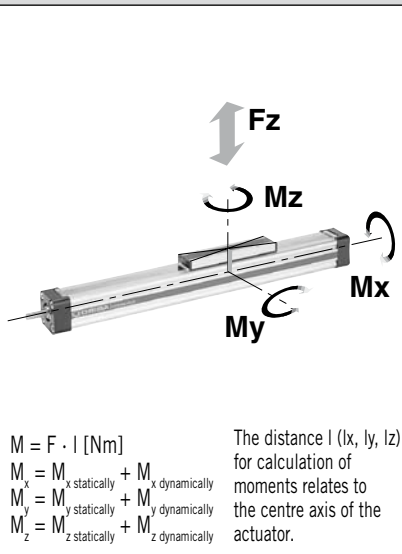

Sizing of Actuator

The following steps are recommended for selection :

1. Recommended maximum acceleration is shown in graphs on page 61.
2. Required torque is shown in graphs
3. Check that maximum values in the adjacent charts are not exceeded.
4. When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time of the application.
5. Check that the maximum allowable unsupported length is not exceeded (see on page 59 ff)

Performance Overview							
Characteristics	Unit	Description					
Series		OSP-E25SB	OSP-E32SB		OSP-E50SB		
Pitch	[mm]	5	5	10	5	10	25
Max. speed	[m/s]	0.25	0.25	0.5	0.25	0.5	1.25
Linear motion per revolution drive shaft	[mm]	5	5	10	5	10	25
Max. rpm, drive shaft	[min ⁻¹]	3 000	3 000		3 000		
Max. effective action force F _A	[N]	250	600		1 500		
Corresponding torque on drive shaft	[Nm]	0.35	0.75	1.3	1.7	3.1	7.3
No-load torque	[Nm]	0.2	0.2	0.3	0.3	0.4	0.5
Max. allowable torque on drive shaft	[Nm]	0.6	1.5	2.8	4.2	7.5	20
Repeatability	[mm/m]	±0.05	±0.05		±0.05		
Max. Standard stroke length	[mm]	1100	2000		3200		

Forces, loads and moments

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.

The maximum permissible loads must not be exceeded.

Maximum permissible Loads

T3

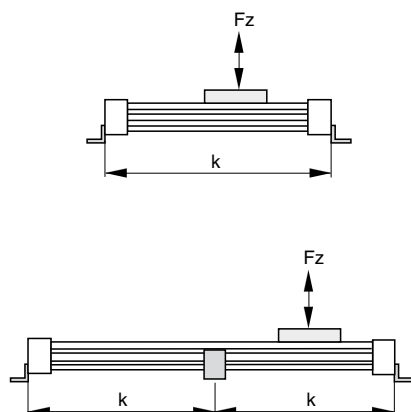

Series	Max. applied load [N] Fz	Max. moments [Nm] Mx My Mz		
OSP-E25SB	500	2	12	8
OSP-E32SB	1 200	8	25	16
OSP-E50SB	3 000	16	80	32

Equation for combined loads

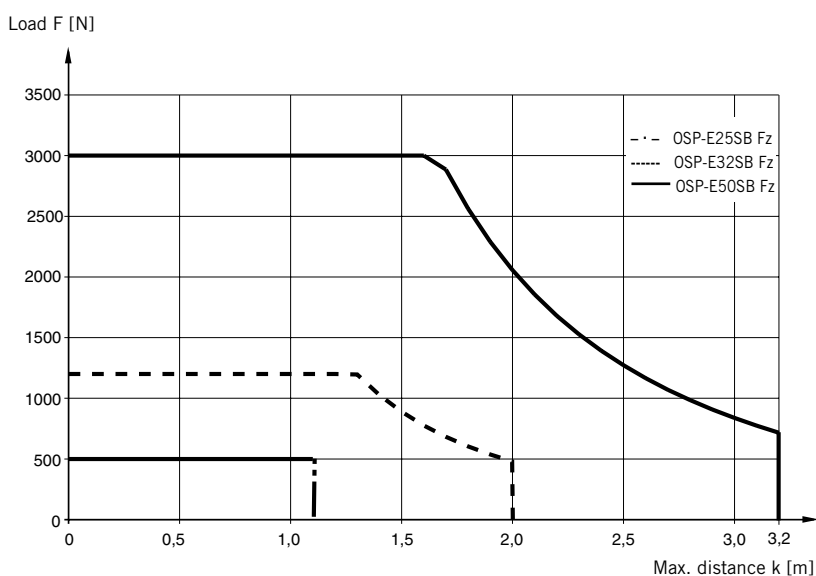

$\frac{F_z}{F_z \text{ (max)}}$	$+$	$\frac{M_x}{M_x \text{ (max)}}$	$+$	$\frac{M_y}{M_y \text{ (max)}}$	$+$	$\frac{M_z}{M_z \text{ (max)}}$	≤ 1
---------------------------------	-----	---------------------------------	-----	---------------------------------	-----	---------------------------------	----------

The total of loads must not exceed >1 under any circumstances.

Maximum Permissible Unsupported Length – Placing of Profile Mounting

k = Maximum permissible distance between mountings/mid-section support for a given load F .

(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k .)

Maximum Permissible Unsupported Length

Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to above maximum stroke lengths.

OSP-E25SB: max. 1100 mm

OSP-E32SB: max. 2000 mm

OSP-E50SB: max. 3200 mm

Other stroke lengths are available on request.

The end of stroke must not be used as a mechanical stop.

Allow an additional safety clearance of minimum 25 mm at both ends.

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems.

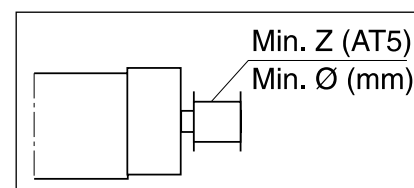

For advise, please contact your local Parker Origa technical support department.

Mounting on the Drive Shaft

Do not expose the drive shaft to uncontrolled axial or radial forces when mounting coupling or pulley, a steadying block should be used.

Pulleys

Minimum allowable number of teeth (AT5) and diameter of pulley at maximum applied torque.

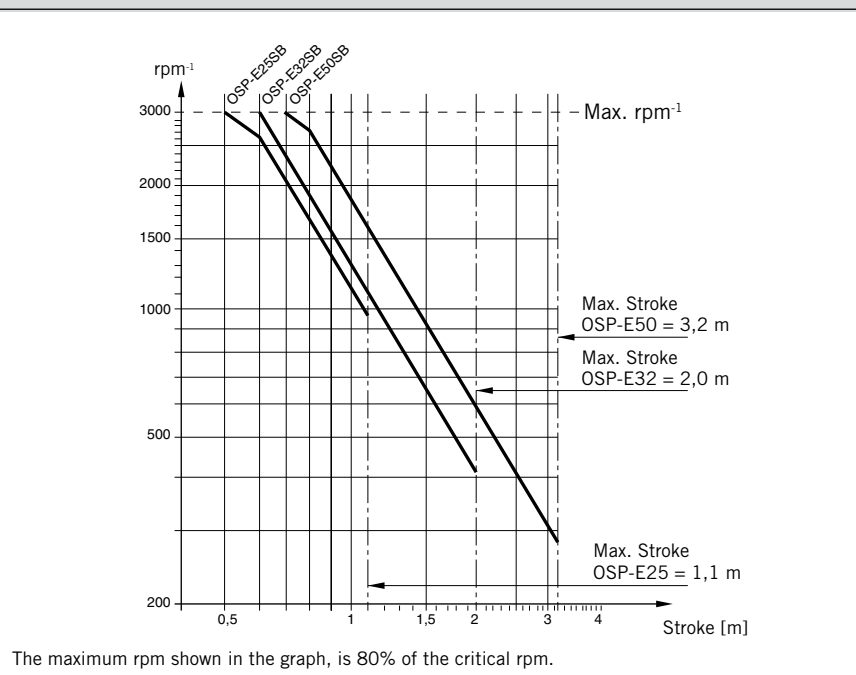

Size	Min. Z	Min. Ø
OSP-E25SB	24	38
OSP-E32SB	24	38
OSP-E50SB	36	57

Maximum rpm / Stroke

At longer strokes the speed has to be reduced according to the adjacent graphs.

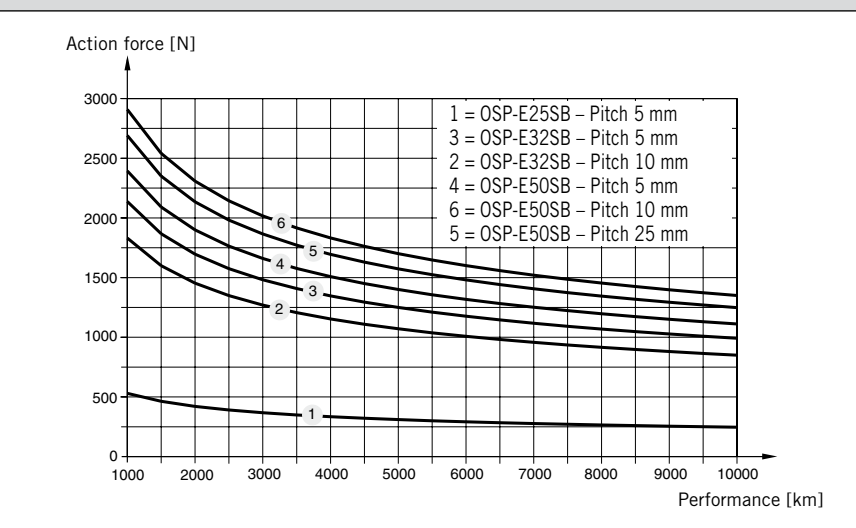

Maximum rpm / Stroke

Performance / Action force

The performance to be expected depends on the maximum required actions force of the application. An increase of the action force will lead to a reduced performance.

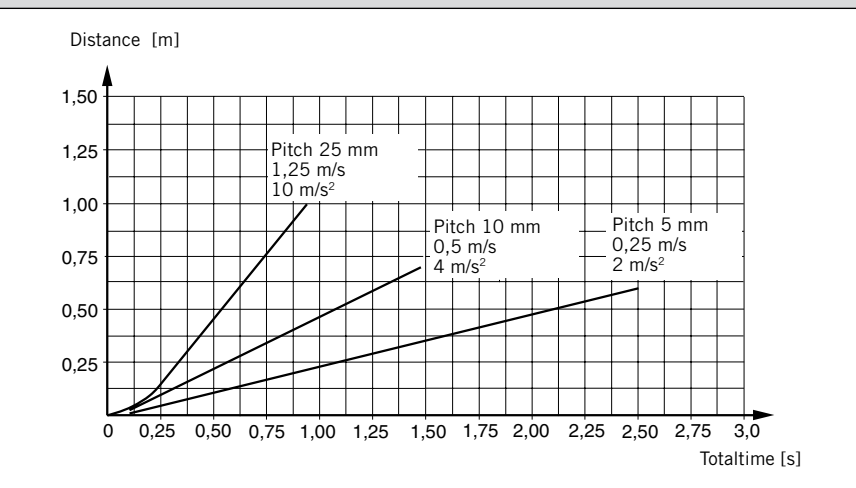

Performance as a function of the action force

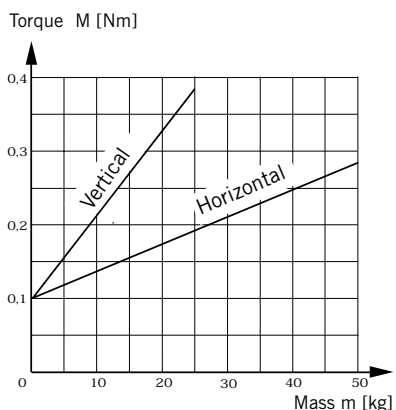

Distance / Time Graph

The adjacent graphs show travel distance and total time at maximum speed and recommended maximum acceleration. The graph assumes that acceleration and deceleration are equal.

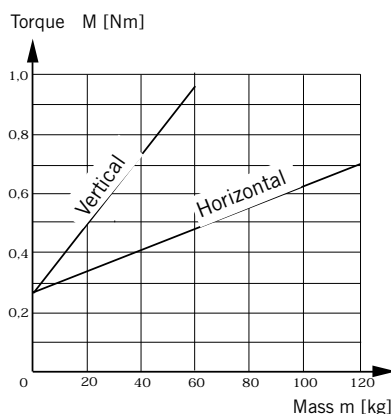

Distance / Time Graph

Size OSP-E25SB, Pitch 5mm
Acceleration 2 m/s²

Size OSP-E32SB, Pitch 5 mm
Acceleration 2 m/s²

Required Torque / Mass

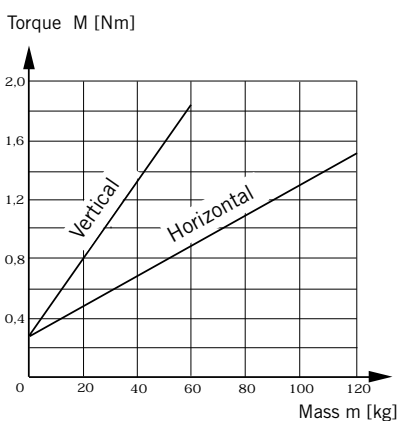

Using the known mass, the direction of the application and the recommended acceleration, the actuator can be sized and the required torque is shown in the adjacent graphs.

Mass in graphs = Load + moving mass of the actuator according to the weight chart (see table on page 61).

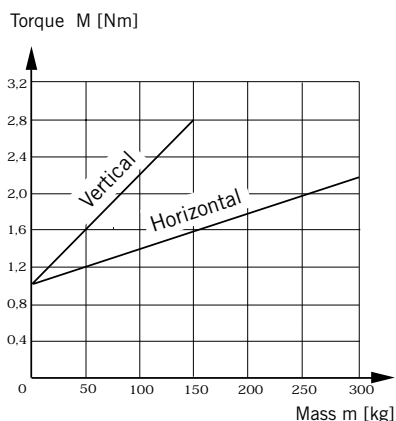

Please mind:

If an additional guide is used, mind the weight of the guide carriage.

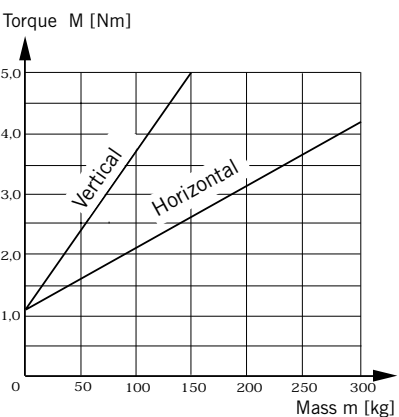

Size OSP-E32SB, Pitch 10 mm
Acceleration 4 m/s²

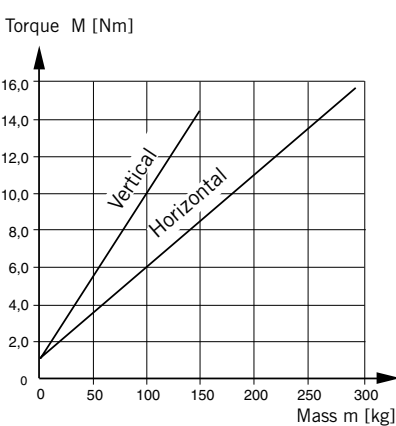

Size OSP-E50SB, Pitch 5 mm
Acceleration 2 m/s²

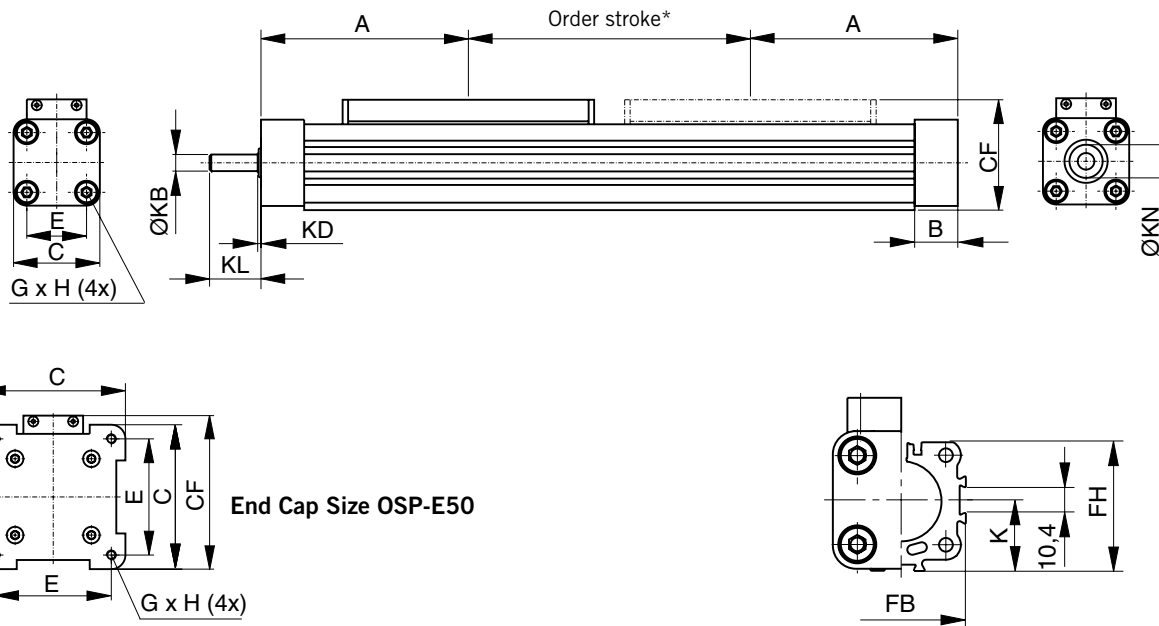

Size OSP-E50SB, Pitch 10 mm
Acceleration 4 m/s²

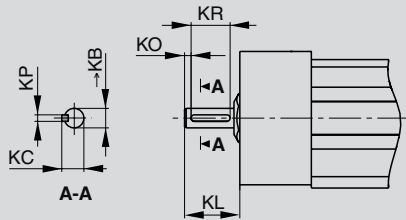

Size OSP-E50SB, Pitch 25 mm
Acceleration 10 m/s²

OSP-E..SB
Ball Screw Actuator with internal Plain Bearing Guide – Basic Unit

Plain shaft with keyway (Option)

Dimension Table [mm]

Series	ØKB _{h7}	KC	KL Opt.3	Opt.4	KO	KP ^{P9}	KR
OSP-E25SB	6	6.8	17	24	2	2	12
OSP-E32SB	10	11.2	31	41	5	3	16
OSP-E50SB	15	17	43	58	6	5	28

Option 3: Keyway
Option 4: Keyway long version

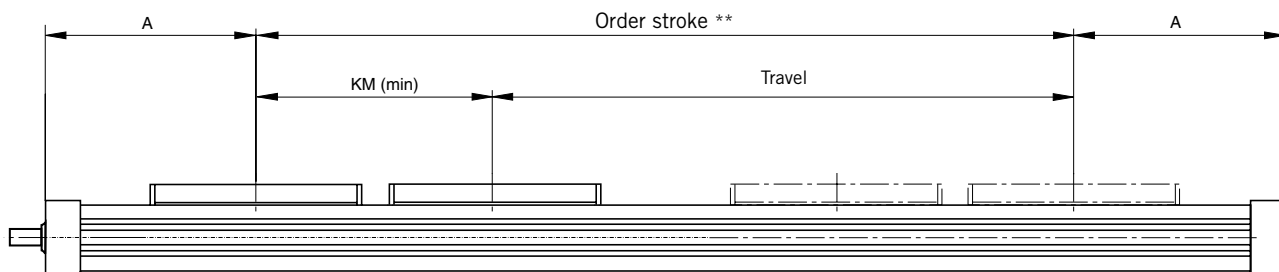

*** Note:**

The mechanical end position must not be used as a mechanical end stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 25 mm.

Order stroke = required travel + 2 x safety distance.

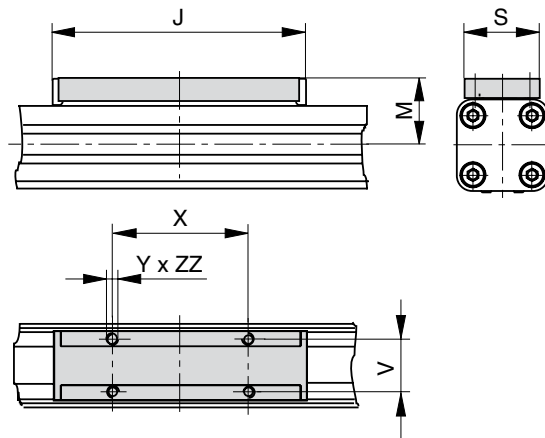

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems. For further information, please contact your local Parker Origa representative.

Option – Tandem

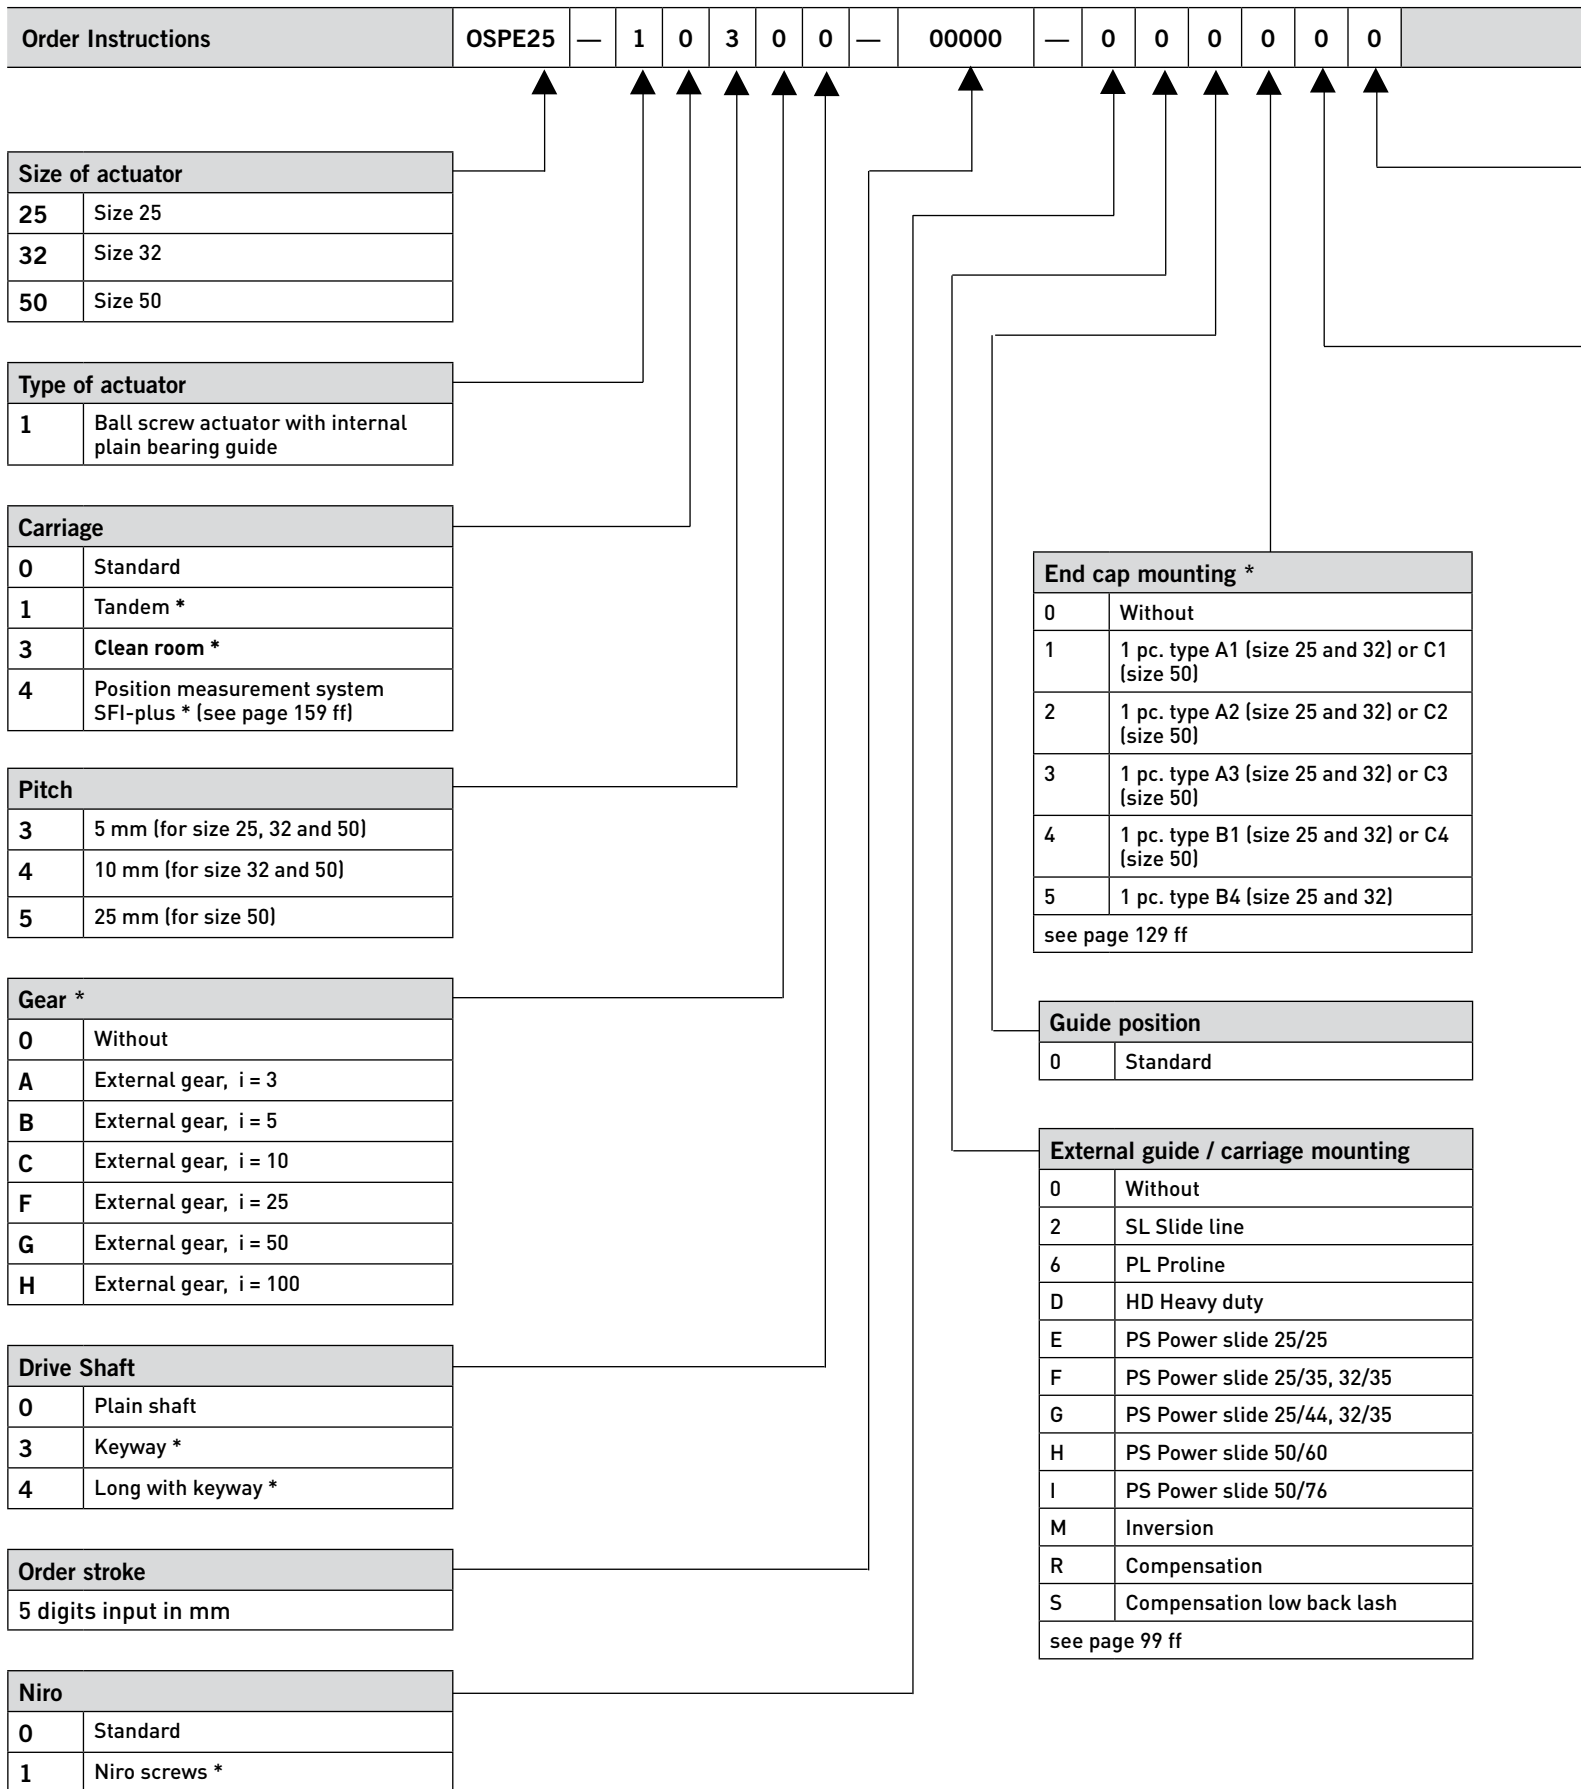

** Order stroke = required travel + KM min + 2 x safety distance

TRAPEZOIDAL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE FOR INTERMITTENT APPLICATIONS

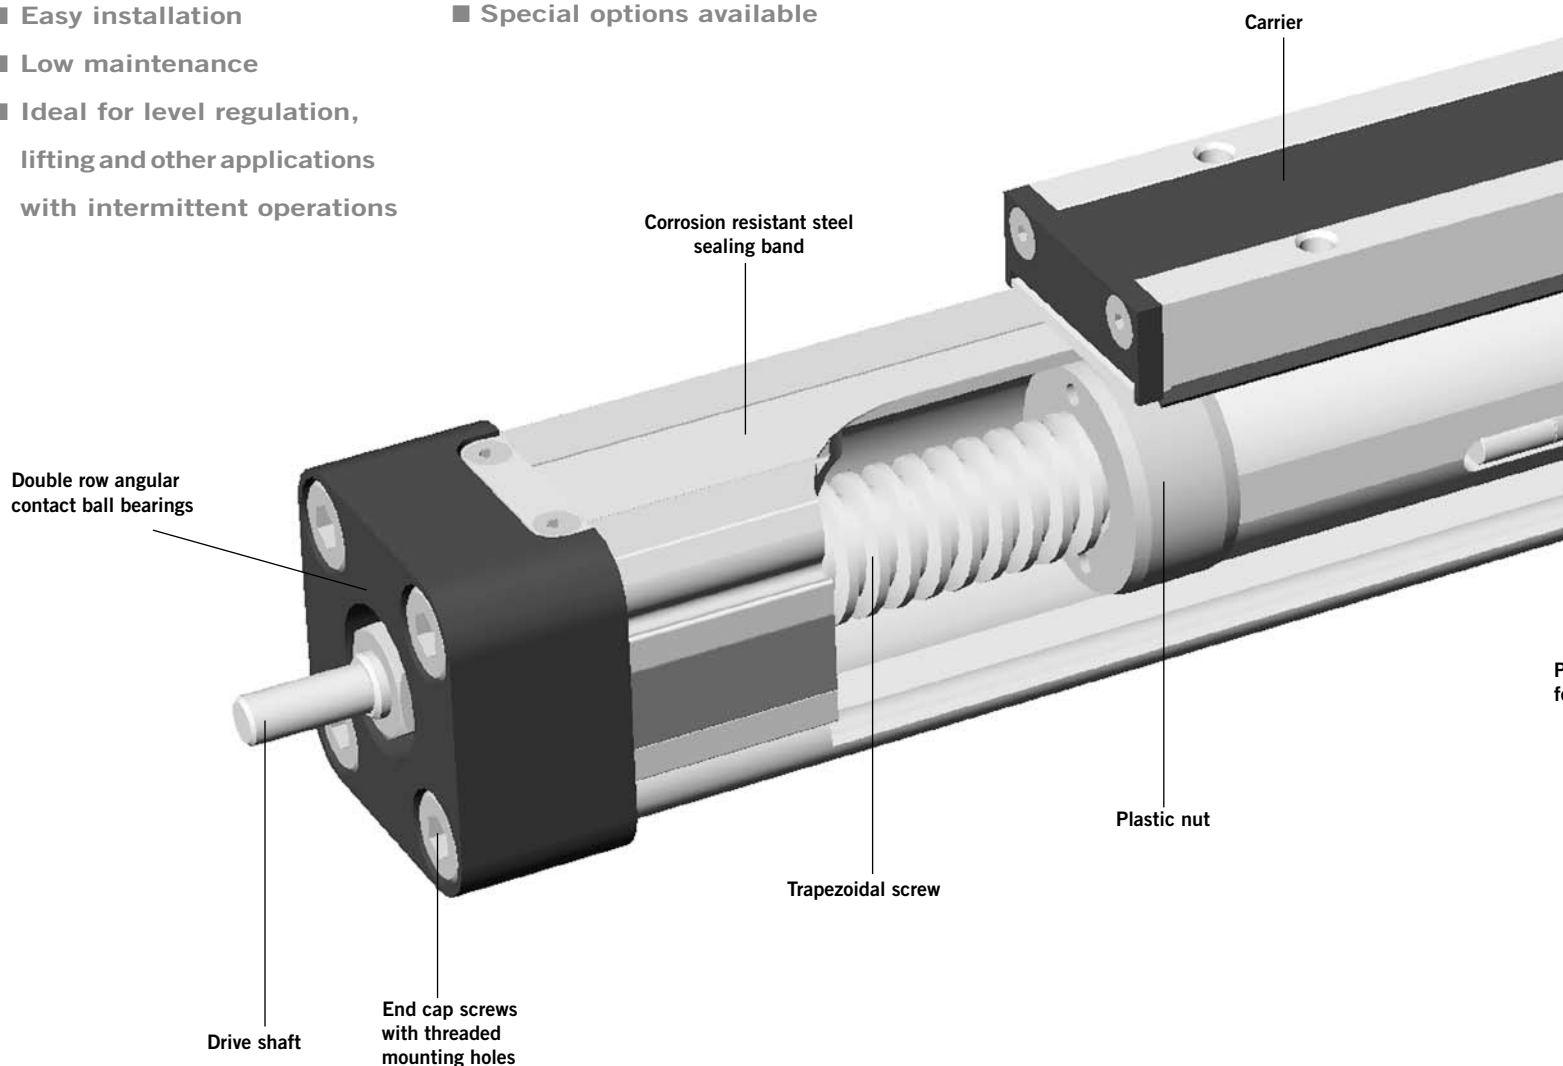

A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

Advantages

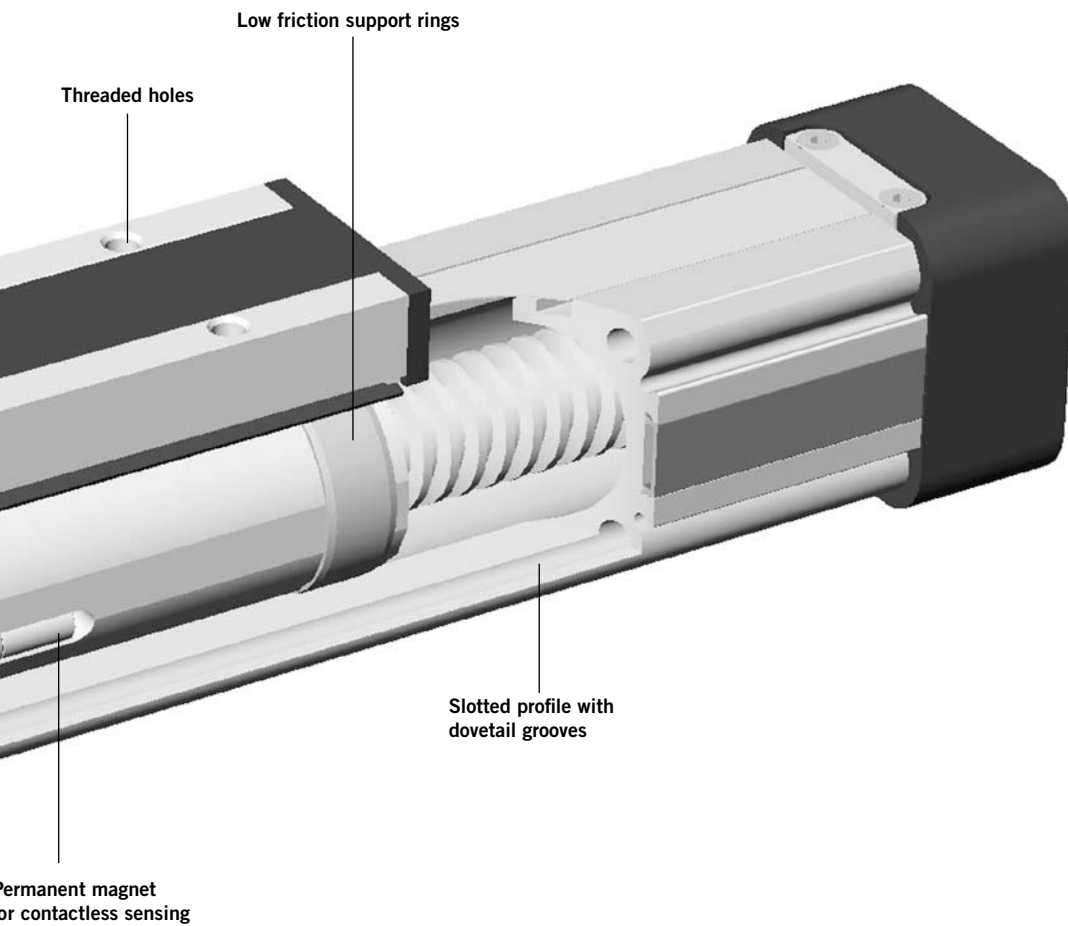

- Accurate path and position control
- High force output
- Self-locking
- Excellent slow speed characteristics
- Easy installation
- Low maintenance
- Ideal for level regulation, lifting and other applications with intermittent operations

Features

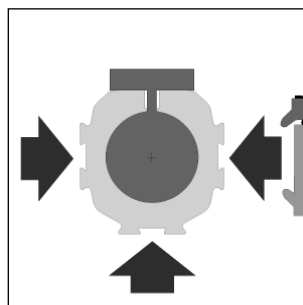

- Integrated drive and guidance system
- Complete motor and control packages
- Diverse range of accessories and mountings
- Special options available

Take the easy route and load all the dimensions into your system. The file is suitable for all current CAD systems – available on CD-Rom or at www.parker-origa.com

The dovetailed mounting rails of the new actuator expand its function into that of a universal system carrier. Modular system components are simply clamped on.

SLIDELINE
Combination with sliding guide for heavy-duty operation

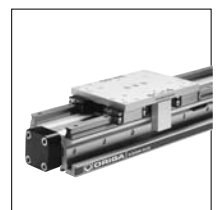

POWERSLIDE
Roller bearing precision guidance for smooth travel and high dynamic or static loads.

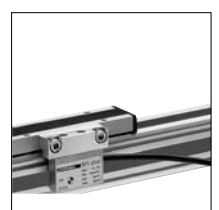

PROLINE
The compact aluminium roller guide for high loads and velocities.

Heavy Duty guide HD
linear guides for heavy duty applications

SFI-plus
displacement measuring system

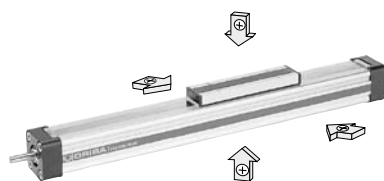

OPTIONS AND ACCESSORIES

OSP-E..ST TRAPEZOIDAL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE

STANDARD VERSIONS OSP-E..ST

Standard carrier with internal guidance and integrated magnet set for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

ACCESSORIES

MOTOR MOUNTINGS

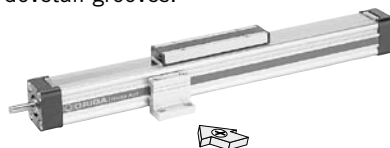

END CAP MOUNTING

For end-mounting of the actuator

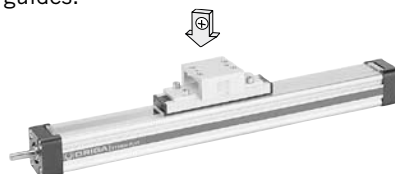

PROFILE MOUNTING

For supporting long actuators or mounting the actuator on the dovetail grooves.

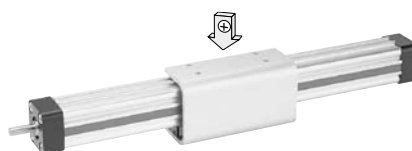

CLEVIS MOUNTING

Carrier with tolerance and parallelism compensation to drive external linear guides.

INVERSION MOUNTING

The inversion mounting, mounted on the carrier, transfers the driving force to the opposite side, e.g. for dirty environments.

MAGNETIC SWITCHES SERIES RST UND EST

For contactless position sensing of end stop and intermediate carrier positions.

MEASURING SYSTEM - SFI-PLUS

Incremental measuring system with practically relevant resolution.

Characteristics			
Characteristics	Symbol	Unit	Description
General Features			
Series			OSP-E..ST
Name			Trapezoidal Screw Actuator with internal Plain Bearing Guide
Mounting			See drawings
Temperature Range	ϑ_{\min} ϑ_{\max}	°C °C	-20 +70
Weight (mass)		kg	See table
Installation			In any position
Material	Slotted profile		Extruded anodized aluminium
	Trapezoidal screw		Cold rolled steel
	Drive nut		Thermoplastic polyester
	Guide bearings		Low friction plastic
	Sealing band		Hardened, corrosion resistant steel
	Screws, nuts		zinc plated steel
	Mountings		zinc plated steel and aluminium
Encapsulation class		IP	54

Weight (mass) and Inertia					
Series	Weight (mass)[kg]		Moving mass	Inertia [x 10 ⁻⁶ kgm ²]	
	At stroke 0 m	Add per metre stroke		At stroke 0 m	Add per metre
OSP-E25ST	0.9	2.8	0.2	6	29.6
OSP-E32ST	2.1	5.0	0.5	21.7	81
OSP-E50ST	5.1	10.6	1.3	152	400

Installation Instructions

Use the threaded holes in the free end cap and a profile mounting close to the motor end for mounting the actuator.

See if profile mountings are needed using the maximum permissible unsupported length graph on page 73. At least one end cap must be secured to prevent axial sliding when Profile Mounting is used.

When the actuator is moving an externally guided load, the compensation must be used.

The actuators can be fitted with the standard carrier mounting facing in any direction.

To prevent contamination such as fluid ingress, the drive should be fitted with its sealing band facing downwards.

The inversion mounting can be fitted to transfer the driving force to the opposite side.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker Origa recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 300 km travel of distance. Please refer to the operating instructions supplied with the drive.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

OSP-E..ST Trapezoidal Screw Actuator with internal Plain Bearing Guide Size 25, 32, 50

Standard Versions:

- Standard carrier with internal plain bearing guide
- Dovetail profile for mounting of accessories and the actuator itself
- Pitch of Trapezoidal Spindle:
Type OSP-E25ST : 4 mm
Type OSP-E32ST: 4 mm
Type OSP-E50ST: 6 mm

Options:

- Displacement Measuring System SFI-plus
- Keyway

Sizing Performance Overview

Maximum Loadings

Sizing of Actuator

The following steps are recommended for selection :

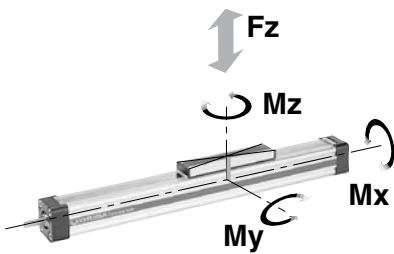

1. Check that maximum values in the table T3 are not exceeded.
2. Check the maximum values in graph on page 74 ff are not exceeded.
3. When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time of the application.
4. Check that the maximum allowable unsupported length is not exceeded (see on page 73 ff).

Performance Overview				
Characteristics	Unit	Description		
Size		OSP-E25ST	OSP-E32ST	OSP-E50ST
Pitch	[mm]	4	4	6
Max. speed	[m/s]	0.1	0.1	0.15
Linear motion per revolution drive shaft	[mm]	4	4	6
Max. rpm, drive shaft	[min ⁻¹]	1500	1500	1500
Max. effective action force F_A	[N]	600	1300	2 500
Corresponding torque on drive shaft	[Nm]	1.35	3.2	8.8
No-load torque	[Nm]	0.3	0.4	0.5
Max. allowable torque on drive shaft	[Nm]	1.55	4.0	9.4
Self-locking force F_L ¹⁾	[N]	600	1300	2500
Repeatability	[mm/m]	±0.5	±0.5	±0.5
Max. Standard stroke length	[mm]	1100	2000	2500*

¹⁾ Related to screw types Tr 16x4, Tr 20x4, TR 30x6
see page 71 ff – for inertia.

* For strokes longer than 2000 mm in horizontal applications, please contact our customer support.

Forces, loads and moments

$$M = F \cdot l \text{ [Nm]}$$

$$M_x = M_{x \text{ static}} + M_{x \text{ dynamic}}$$

$$M_y = M_{y \text{ static}} + M_{y \text{ dynamic}}$$

$$M_z = M_{z \text{ static}} + M_{z \text{ dynamic}}$$

The distance l (l_x , l_y , l_z) for calculation of the bending moments relates to the centre axis of the actuator.

Maximum Permissible Loads

T3

Size	Max. applied load [N] F_z	Max. moments [Nm]		
		M_x	M_y	M_z
OSP-E25ST	500	2	24	7
OSP-E32ST	1000	6	65	12
OSP-E50ST	1500	13	155	26

Equation for Combined Loads

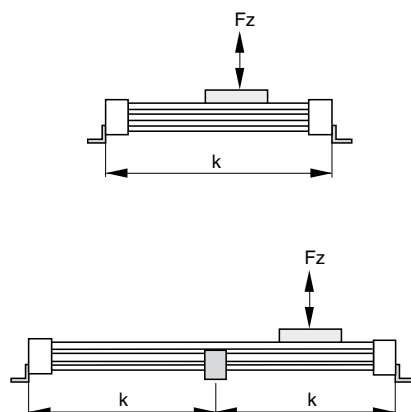

$$\frac{F_z}{F_z \text{ (max)}} + \frac{M_x}{M_x \text{ (max)}} + \frac{M_y}{M_y \text{ (max)}} + \frac{M_z}{M_z \text{ (max)}} \leq 1$$

The total of the loads must not exceed >1 under any circumstances.

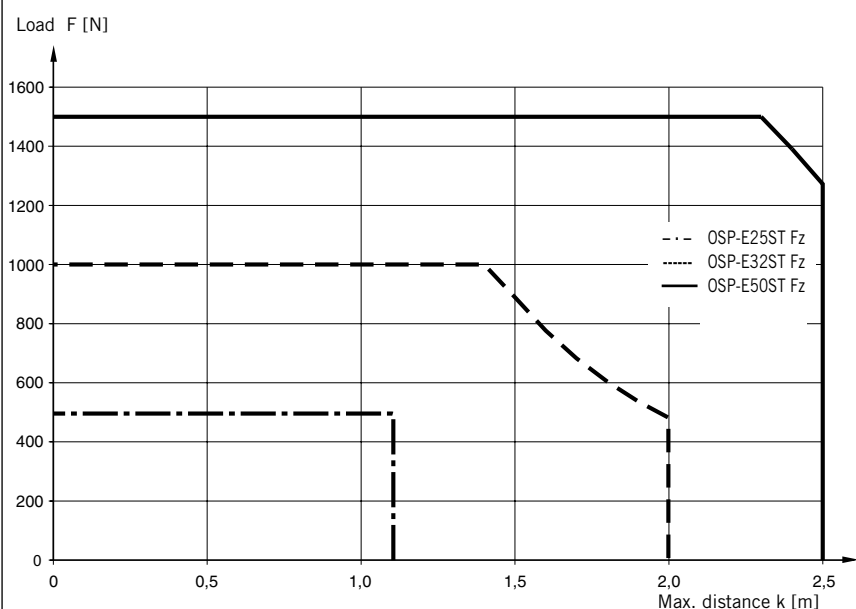

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here. The maximum permissible loads must not be exceeded.

Maximum Permissible Unsupported Length – Placing of Profile Mounting

k = Maximum permissible distance between mountings/mid-section support for a given load F.

(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k.)

Maximum Permissible Unsupported Length

Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to the following maximum stroke lengths.
OSP-E25ST: max. 1100 mm
OSP-E32ST: max. 2000 mm
OSP-E50ST: max. 2500 mm *
 Other stroke lengths are available on request.

* For strokes longer than 2000 mm in horizontal applications, please contact our customer support

The end of stroke must not be used as a mechanical stop.

Allow an additional safety clearance of minimum 25 mm at both ends.

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems.

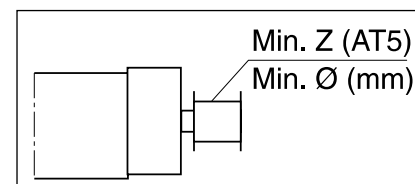

For advise, please contact your local Parker Origa technical support department.

Mounting on the Drive Shaft

Do not expose the drive shaft to uncontrolled axial or radial forces when mounting coupling or pulley, a steadying block should be used.

Pulleys

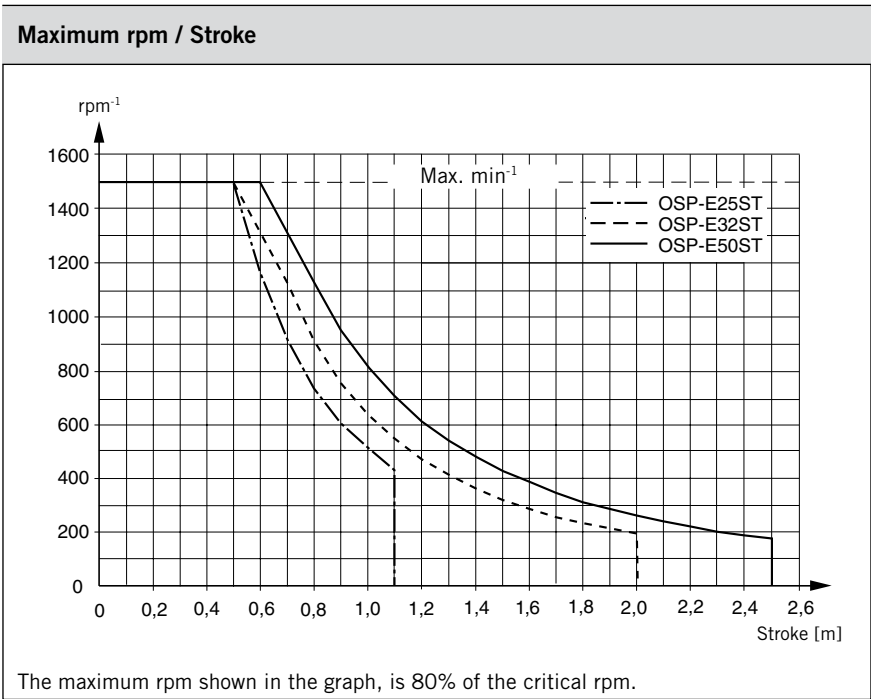

Minimum allowable number of teeth (AT5) and diameter of pulley at maximum applied torque.

Size	Min. Z	Min. ø
OSP-E25ST	24	38
OSP-E32ST	24	38
OSP-E50ST	36	57

Maximum rpm / Stroke

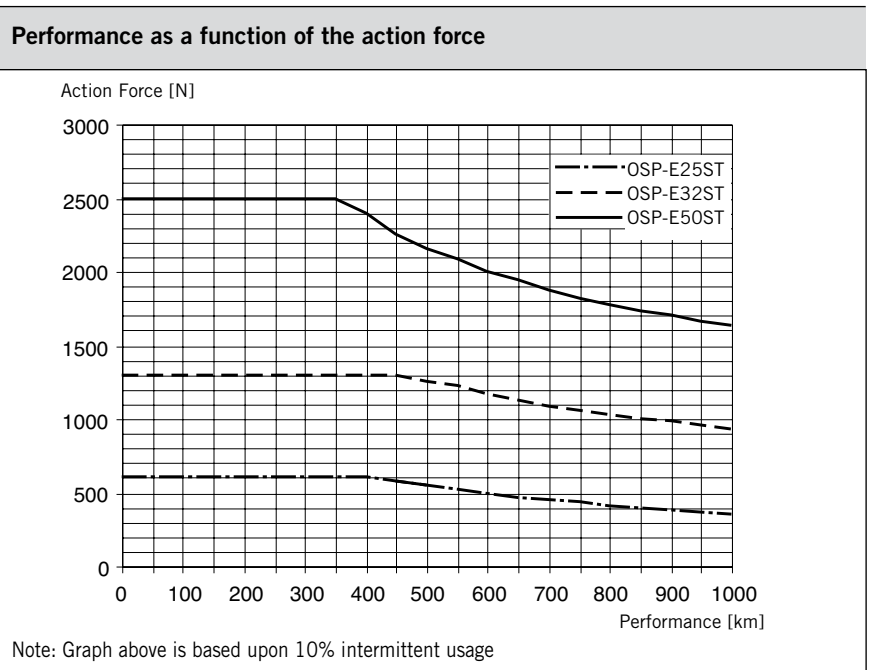

At longer strokes the speed has to be reduced according to the adjacent graphs.

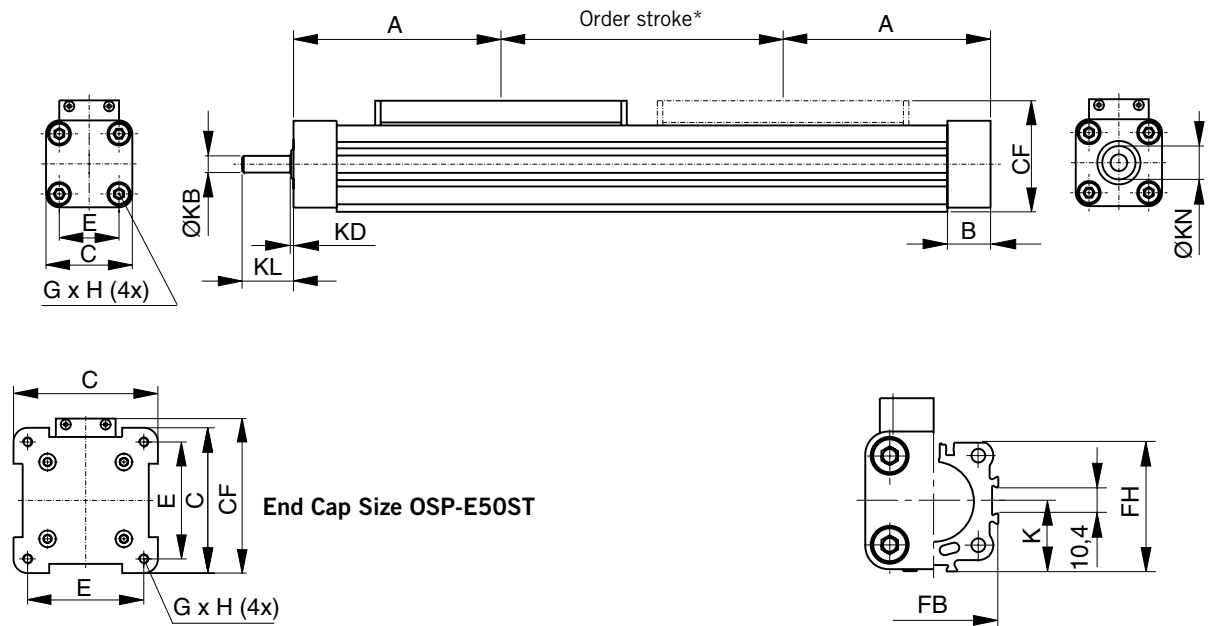

Performance / Action Force

The actuators are designed for a 10% intermittent usage.

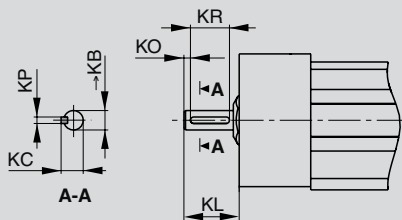

The performance to be expected depends on the maximum required actions force of the application. An increase of the action force will lead to a reduced performance.

Ball Screw Actuator with Internal Plain Bearing Guide and Piston Rod

Contents

Description	Page
Overview	80
Technical Data	83
Dimensions	85
Order Instructions	86 /87

BALL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE AND PISTON ROD FOR ACCURATE PISTON ROD APPLICATIONS

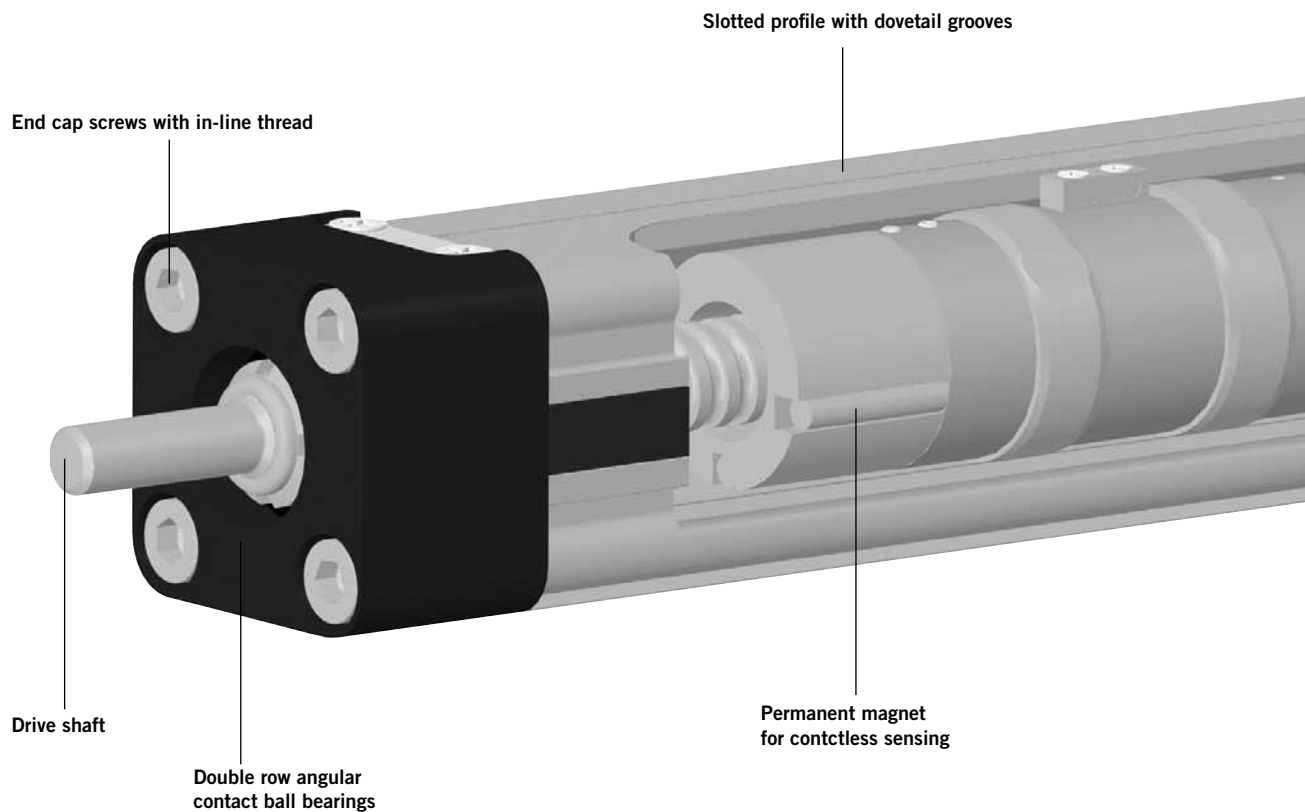

A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

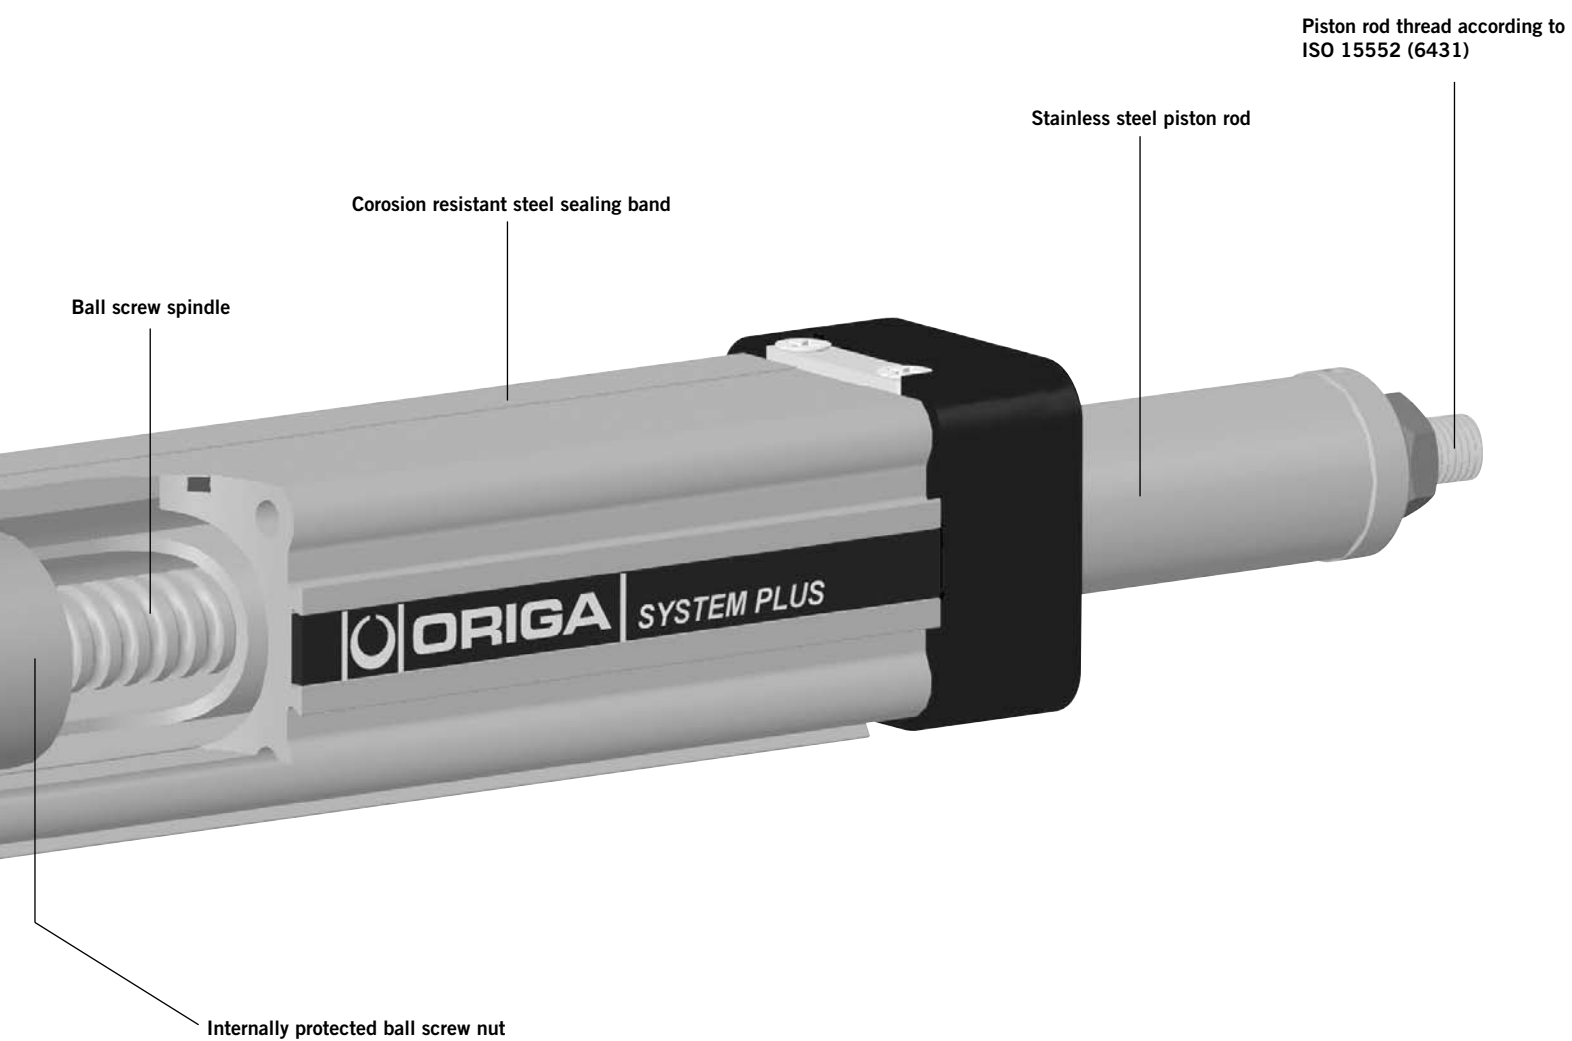

Advantages

- High output force
- Excellent running characteristics
- Accurate path and position control
- High levels of repeatability

Features

- Extending drive rod
- Ball screw spindle
- Non-rotating drive rod
- Continuous duty operation
- Large range of accessories

Take the easy route and load all the dimensions into your system. The file is suitable for all current CAD systems – available on CD-Rom or at www.parker-origa.com

OPTIONS AND ACCESSORIES

OSP-E..SBR BALL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE AND PISTON ROD

STANDARD VERSIONS OSP-E..SBR

Standard piston rod with internal guidance and integrated magnet set for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

BALL SCREW PITCH

The ball screws spindles are available in various pitches:

OSP-E25SBR: 5 mm

OSP-E32SBR: 5, 10 mm

OSP-E50SBR: 5, 10, 25 mm

END CAP MOUNTING

For end-mounting the actuator on the extending rod side.

Flange Mounting C

For end-mounting the actuator on the extending rod side.

PROFILE MOUNTING

For mounting the actuator on the dovetail grooves and on the motor end.

Turning mounting EN in combination with pivot mounting EL.

– steplessly adjustable in axial direction.

COMPENSATION

Piston Rod eye

Piston rod Clevis

Piston Rod compensating coupling

For compensating of radial and angular misalignments

ACCESSORIES

MOTOR MOUNTINGS

MAGNETIC SWITCHES SERIES RST AND EST

For contactless position sensing of end stop and intermediate carrier positions.

Characteristics			
Characteristics	Symbol	Unit	Description
General Features			
Series			OSP-E..SBR
Name			Ball Screw Actuator with internal Plain Bearing Guide and Piston Rod
Mounting			see drawings
Temperature range	ϑ_{\min} ϑ_{\max}	°C °C	-20 +80
Weight (Mass)		kg	see table
Installation			In any position
Material	Slotted profile		Al anodized
	Ball screw		Steel
	Ball nut		Steel
	Piston rod		Stainless steel
	Guide bearings		Low friction plastic
	Sealing band		Hardened, corrosion resistant steel
	Screws, nuts		Zinc plated steel
	Mountings		Zinc plated steel and aluminium
Encapsulation class		IP	54

Weight (Mass) and Inertia						
Series	Weight (Mass) [kg]		Moving Mass [kg]		Inertia [x 10 ⁻⁶ kgm ²]	
	At stroke 0 m	Add per metre stroke	At stroke 0 m	Add per metre stroke	At stroke 0 m	Add per metre stroke
OSP-E25SBR	0.7	3.0	0.2	0.9	1.2	11.3
OSP-E32SBR	1.7	5.6	0.6	1.8	5.9	32.0
OSP-E50SBR	4.5	10.8	1.1	2.6	50.0	225.0

Installation Instructions

Use the threaded holes in the free end cap and a profile mounting close to the motor end for mounting the actuator.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker Origa recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 3000 km travel of distance. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

OSP-E..SBR Ball Screw Actuator with internal Plain Bearing Guide and Piston Rod

Size 25, 32, 50

Standard Version:

- Standard piston rod with internal plain bearing guide
- Pitches of Ball Screw Spindle:
Type OSP-E25SBR : 5 mm
Type OSP-E32SBR: 5, 10 mm
Type OSP-E50SBR: 5, 10, 25 mm

Option:

- Key way version

Sizing Performance Overview Maximum Loadings

Sizing of Actuator

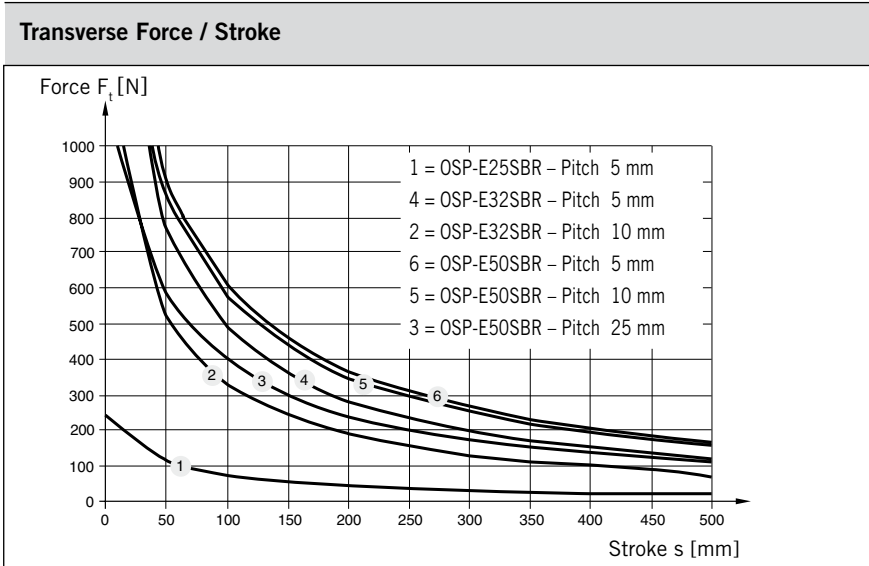

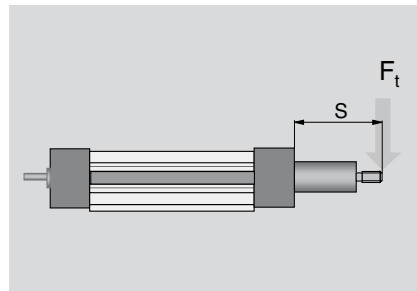

The following steps are recommended for selection :

- 1.Check that the maximum values in the adjacent chart and transverse force/stroke graph below are not exceeded.
- 2.Check the lifetime/travel distance in graph below.
- 3.When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time in applicationg.

Performance overview							
Characteristics	Unit	Description					
Series		OSP-E25SBR		OSP-E32SBR		OSP-E50SBR	
Pitch	[mm]	5	5	10	5	10	25
Max. speed	[m/s]	0.25	0.25	0.5	0.25	0.5	1.25
Linear motion per revolution drive shaft	[mm]	5	5	10	5	10	25
Max. rpm drive shaft	[min ⁻¹]	3000	3000		3000		
Max. effective action force F_A	[N]	260	900		1200		
Corresponding torque drive shaft	[Nm]	0.45	1.1	1.8	1.3	2.8	6.0
No-load torque	[Nm]	0.2	0.2	0.3	0.3	0.4	0.5
Max. allowable torque on drive shaft	[Nm]	0.6	1.5	2.8	4.2	7.5	20
Max. allowable acceleration	[m/s ²]	5	5		5		
Typical repeatability	[mm/m]	±0.05	±0.05		±0.05		
Max.Standard stroke length	[mm]	500	500		500		

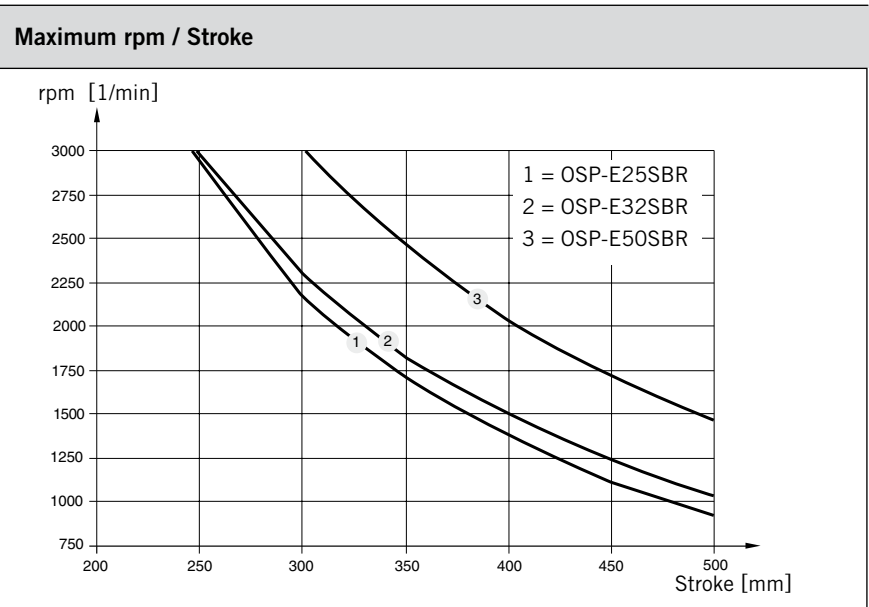

Transverse Force / Stroke

The permissible transverse force is reduced with increasing stroke length. according to the adjacent graphs.

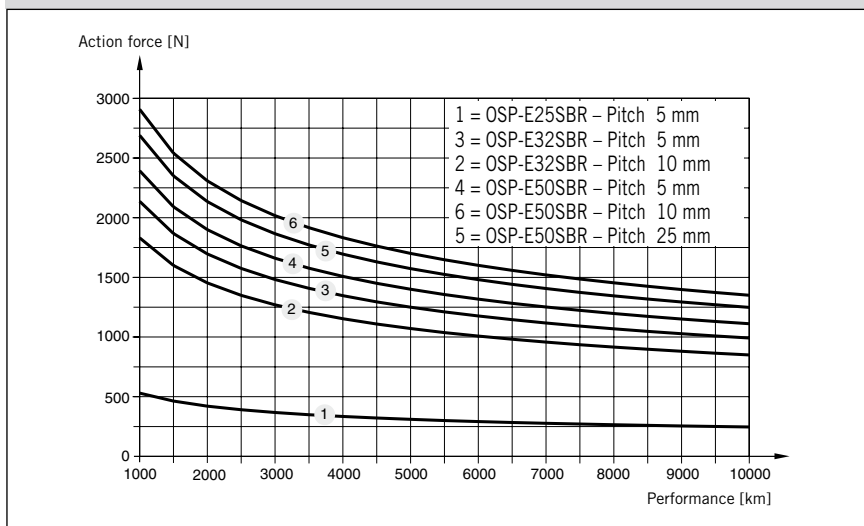

Maximum rpm / Stroke

At longer stokes the speed has to be reduced according to the adjacent graphs.

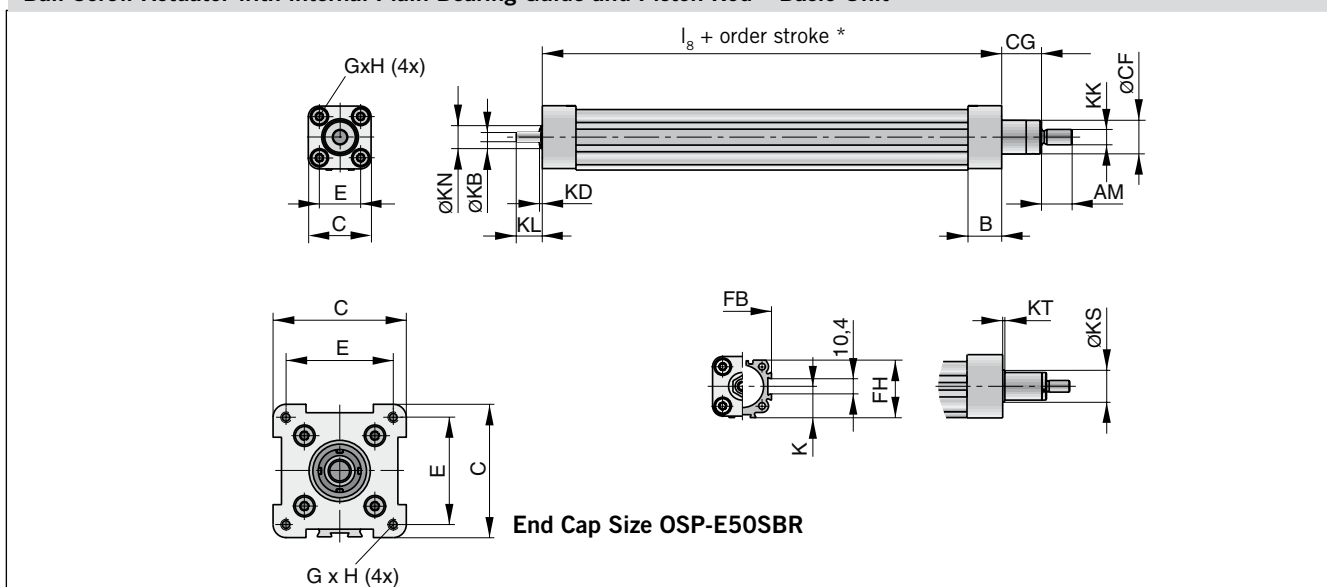

Performance as a function of the action force

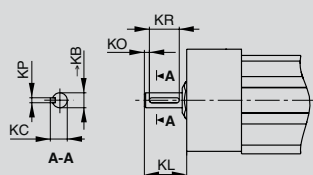

Performance / Action force

The performance to be expected depends on the maximum required actions force of the application. An increase of the action force will lead to a reduced performance.

OSP-E..SBR Ball Screw Actuator with internal Plain Bearing Guide and Piston Rod – Basic Unit

Plain shaft with keyway (Option)

Dimension Table [mm]

Series	ØKB _{h7}	KC	KL Opt.3	Opt.4	KO	KP ^{P9}	KR
OSP-E25SBR	6	6.8	17	24	2	2	12
OSP-E32SBR	10	11.2	31	41	5	3	16
OSP-E50SBR	15	17	43	58	6	5	28

Option 3: Keyway

Option 4: Keyway long version

* Note:

The mechanical end position must not be used as a mechanical end stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 25 mm.

Order stroke = required travel + 2 x safety distance.

The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems. For further information, please contact your local Parker Origa representative.

OSP-E..STR

Trapezoidal Screw Actuator with Internal Plain Bearing Guide and Piston Rod

Contents

Description	Page
Overview	90
Technical Data	93
Dimensions	95
Order Instructions	96 / 97

TRAPEZOIDAL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE AND PISTON ROD FOR INTERMITTENT APPLICATIONS

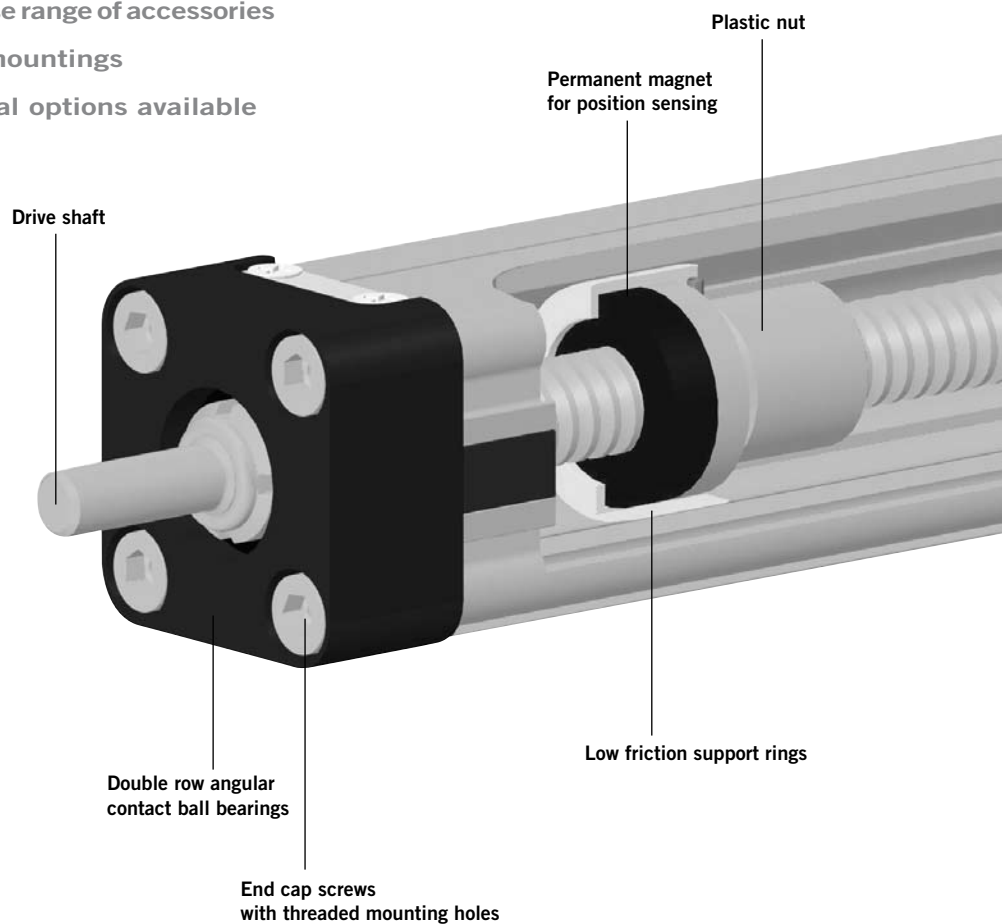

A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

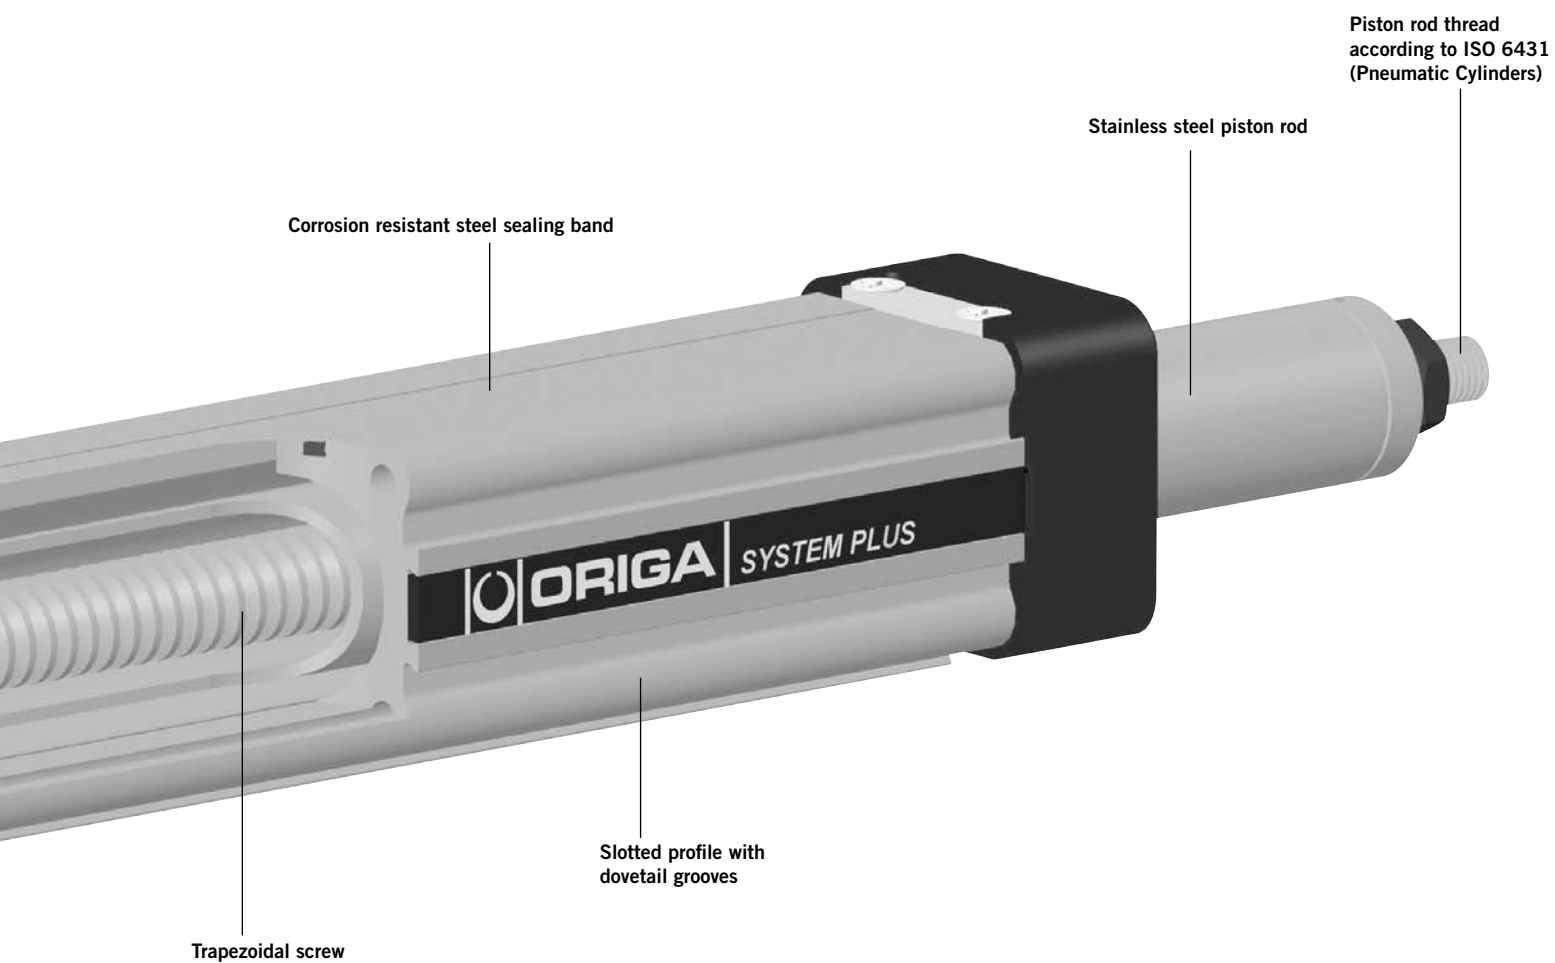

Advantages

- Accurate path and position control
- High force output
- Self-locking
- Excellent slow speed characteristics
- Easy installation
- Low maintenance
- Ideal for level regulation, lifting and other applications with intermittent operations

Features

- Piston rod-end dimensions conforming to ISO pneumatic standards
- Complete motor and control packages
- Diverse range of accessories and mountings
- Special options available

Take the easy route and load all the dimensions into your system. The file is suitable for all current CAD systems – available on CD-Rom or at www.parker-origa.com

OPTIONS AND ACCESSORIES

OSP-E..STR TRAPEZOIDAL SCREW ACTUATOR WITH INTERNAL PLAIN BEARING GUIDE AND PISTON ROD

STANDARD VERSIONS OSP-E..STR

Standard piston rod with internal guidance and integrated magnet set for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

ACCESSORIES

MOTOR MOUNTINGS

END CAP MOUNTING

For end-mounting the actuator on the extending rod side.

Flange Mounting C

For end-mounting the actuator on the extending rod side.

PROFILE MOUNTING

For mounting the actuator on the dovetail grooves and on the motor end.

Turning mounting EN in combination with pivot mounting EL.

– steplessly adjustable in axial direction.

COMPENSATION

Piston Rod eye

Piston rod Clevis

Piston Rod compensating coupling

For compensating of radial and angular misalignments

MAGNETIC SWITCHES SERIES RST AND EST

For contactless position sensing of end stop and intermediate carrier positions.

Characteristics			
Characteristics	Symbol	Unit	Description
General Features			
Series			OSP-E..STR
Name			Trapezoidal Actuator with internal Plain Bearing Guide and Piston Rod

OSP-E32STR	0.9	5.4	0.2	1.2	3.9	29.6
OSP-E50STR	2.4	10.6	0.8	1.6	24.6	150

Installation Instructions

Use the threaded holes in the free end cap and a profile mounting close to the motor end for mounting the actuator.

The actuator can be fitted in any position. To prevent contamination such as fluid ingress, the actuator should be fitted with its sealing band facing downwards.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker Origa recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 300 km travel of distance. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 91/368/EEC.

Contactless position sensing

Please use the magnetic switch mentioned below:

KL3096 (Type RS-K, normally closed, Reed-contact, with cable)

KL3098 (Type ES-S, Magnetic electronic, PNP-switch with DIN-plug)

OSP-E..STR Trapezoidal Screw Actuator with internal Plain Bearing Guide and Piston Rod

Size 25, 32, 50

Standard Version:

- Dovetail profile for mounting of accessories and the actuator itself
- Pitch of Trapezoidal Spindle:
Type OSP-E25STR: 3 mm
Type OSP-E32STR: 4 mm
Type OSP-E50STR: 5 mm

Sizing Performance Overview Maximum Loadings

Sizing of Actuator

The following steps are recommended for selection :

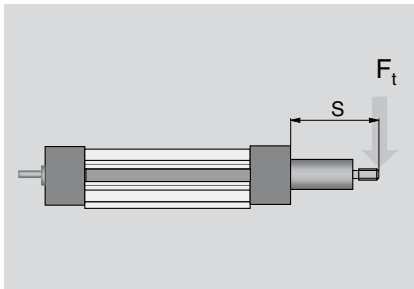

1. Check that the maximum values in the adjacent chart and transverse force/stroke graph below are not exceeded.
2. Check the lifetime/travel distance in graph below.
3. When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time in application

Performance Overview				
Characteristics	Unit	Description		
Size		OSP-E25STR	OSP-E32STR	OSP-E50STR
Pitch	[mm]	3	4	5
Max. speed	[m/s]	0.075	0.1	0.125
Linear motion per revolution, drive shaft	[mm]	3	4	5

Adaptive modular system

The Origa system plus – OSP – provides a comprehensive range of linear guides for the pneumatic and electric actuators.

Versions:

Electric actuator

Series:

- **OSP-E..B**
- **OSP-E..SB**
- **OSP-E..ST**

• Sizes:

25 - 32 - 50

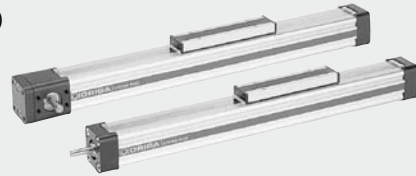

Advantages:

- takes high loads and moments
- high precision
- smooth operation
- can be retrofitted
- can be installed in any position

Linear Guides

Electric actuator

- Series **OSP-E..B** (Belt)
- Series **OSP-E..SB** (Ball Screw)
- Series **OSP-E..ST** (Trapezoidal Screw)

SLIDELINE

The cost-effective plain bearing guide for medium loads.

- for screw actuators only
- Series **OSP-E..SB**, **OSP-E..ST**

See page 101 ff

POWERSLIDE

The roller guide for heavy loads.

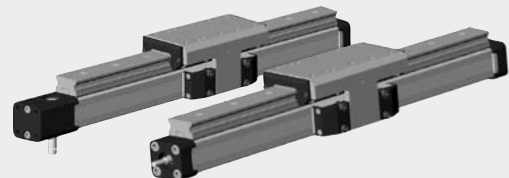

See page 103 ff

PROLINE

The ball bushing guide for heavy loads and speed.

See page 107 ff

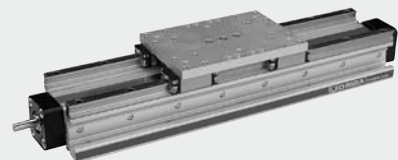

HD-Guide (heavy-duty guide)

The ball bearing guide for the heaviest loads and greatest accuracy.

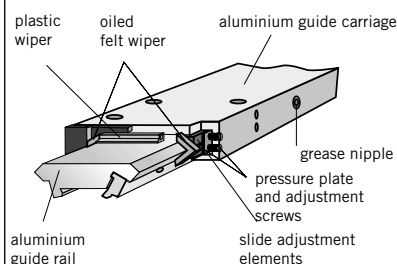

- for Screw Actuators only
- Series **OSP-E..SB**, **OSP-E..ST**

See page 111 ff

• Series OSP-E Screw

Technical Data

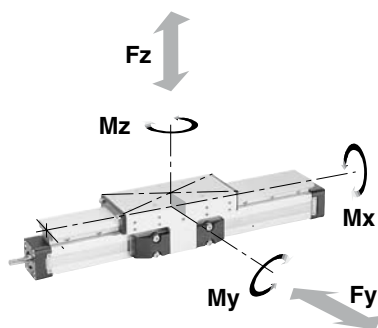

The table shows the maximum permissible values for smooth operation, which must not be exceeded even under dynamic conditions.

The load and moment figures apply to speeds $v < 0.2$ m/s.

Features:

- anodised aluminium guide rail with prism-shaped slideway arrangement
- adjustable plastic slide elements
- composite sealing system with plastic and felt wiper elements to remove dirt and lubricate the slideways.
- corrosion-resistant version available on request.

for Actuator**

- Series OSP-E Belt *
- Series OSP-E Screw

Technical Data

The Table shows the maximum permissible values for smooth operation, which must not be exceeded even under dynamic conditions.

For further information and technical data see data sheets for actuators.

Features:

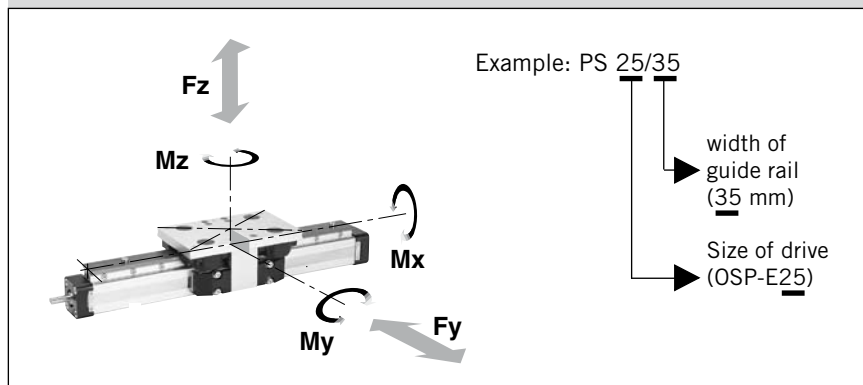

- anodised aluminium guide carriage with vee rollers having 2 rows of ball bearings
- hardened steel guide rail
- several guide sizes can be used on the same drive
- max. speed $v = 3 \text{ m/s}$
- tough roller cover with wiper and grease nipple
- any length of stroke up to 3500 mm (longer strokes on request). The maximum stroke lengths of actuators OSP-E..B, OSP-E..SB and OSP-E..ST must be observed.

OSP-E Belt:

For position of guides see page 109

* **Series PS for OSP-E Bi-parting version on request**

Dimensions – Series OSP-E Belt

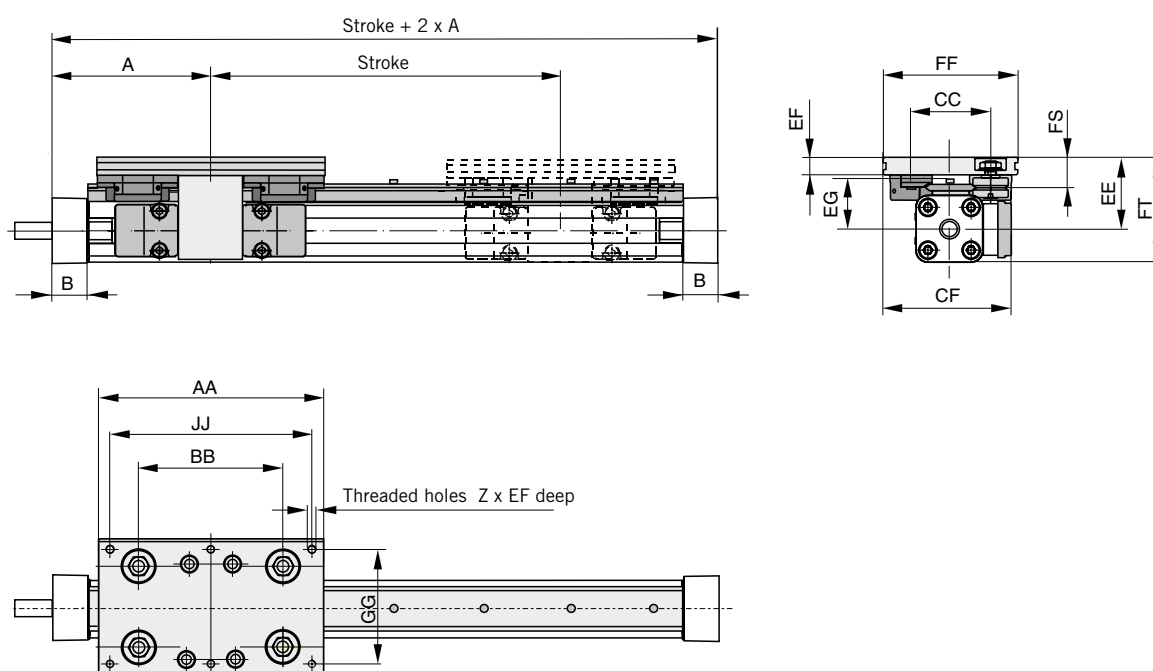

* Please note

The dimension „AZ“ must be added to „A“. Stroke length to order is stroke + dimension „AZ“ + safety clearance.

Please also note the effect of dimension „AZ“ when retrofitting a guide – contact your local Parker Origa technical support department.

Load Case 1 – Top Carrier

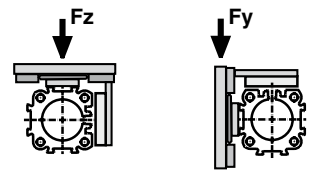

(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k .)

Guide Mounting

(see page 149)

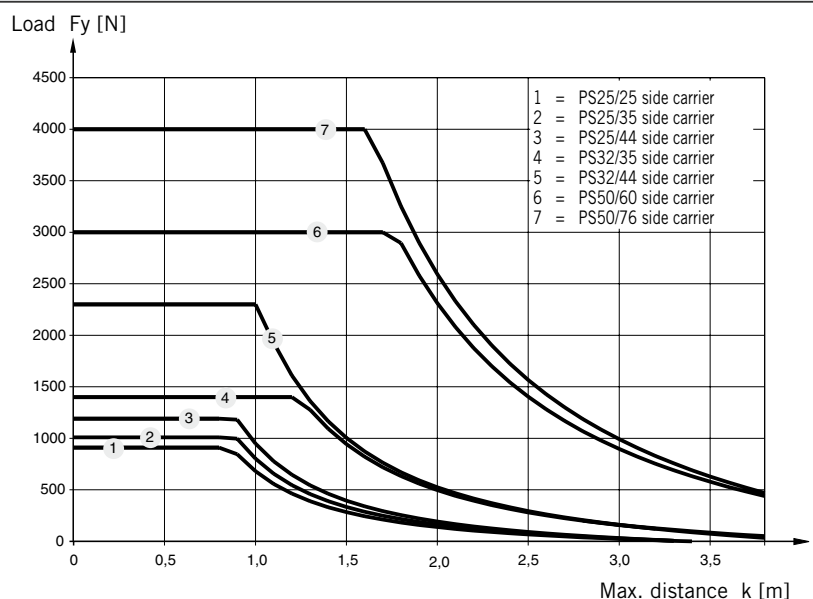

Guide mountings are required from a certain stroke length to prevent excessive deflection and vibration of the actuator. The diagrams show the maximum permissible unsupported length in relation to loading.

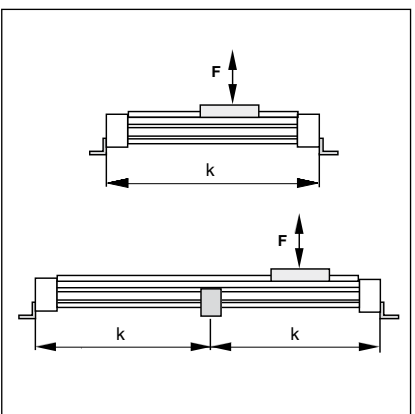

Load case 1
Top carrier

Load case 2
Side carrier

Load Case 2 – Side Carrier

(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k .)

Performance

Calculation of performance is achieved in two stages:

- Determination of load factor L_F from the loads to be carried
- Calculation of service life in km

1. Calculation of load factor L_F

$$L_F = \frac{F_y}{F_{y_{\max}}} + \frac{F_z}{F_{z_{\max}}} + \frac{M_x}{M_{x_{\max}}} + \frac{M_y}{M_{y_{\max}}} + \frac{M_z}{M_{z_{\max}}}$$

with combined loads, L_F must not exceed the value 1

Lubrication

For maximum system life, lubrication of the rollers must be maintained at all times.

Only high quality lithium-based greases should be used.

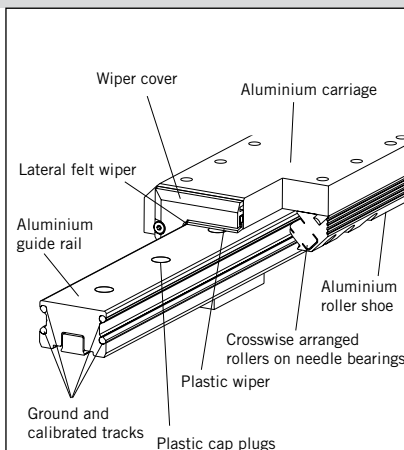

Lubrication intervals are dependent on environmental conditions (temperature, running speed, grease quality etc.) therefore the installation should be regularly inspected.

2. Calculation of Performance

• For PS 25/25, PS 25/35 and PS 32/35:	Service life [km] = $\frac{106}{(L_F + 0,02)^3}$
• For PS 25/44, PS 32/44 and PS 50/60:	Service life [km] = $\frac{314}{(L_F + 0,015)^3}$
• For PS 50/76:	Service life [km] = $\frac{680}{(L_F + 0,015)^3}$

OSP
— ORIGA
— SYSTEM
— PLUS

Series PL 25 to 50
for Actuator

- Series OSP-E Belt *
- Series OSP-E Screw

Technical Data

The table shows the maximum permissible loads. If multiple moments and forces act upon the cylinder simultaneously, the following equation applies:

$$\frac{F_y}{F_{y_{\max}}} + \frac{F_z}{F_{z_{\max}}} + \frac{M_x}{M_{x_{\max}}} + \frac{M_y}{M_{y_{\max}}} + \frac{M_z}{M_{z_{\max}}} \leq 1$$

The table shows the maximum permissible values for light, shock-free operation, which must not be exceeded even under dynamic conditions.

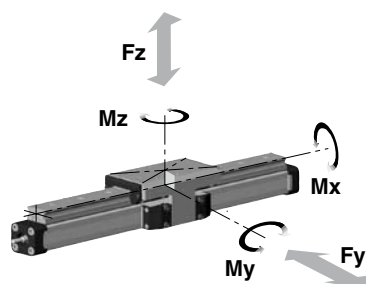

With a load factor of < 1, the service life is 5000 km.

The sum of the loads must not exceed >1

Features:

- High precision
 - High velocities (10 m/s)
 - Smooth operation - low noise
 - Integrated wiper system
 - Compact dimensions - compatible to Slideline plain bearing guide
 - Stainless steel version available on request
 - Any length of stroke up to 3750 mm
- The maximum stroke lengths of actuators OSP-E..B, OSP-E..SB and OSP-E..ST must be observed

Loads, forces and moments

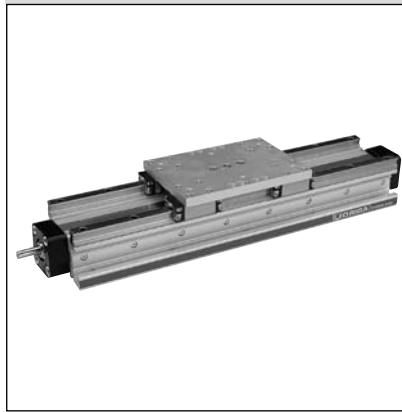

Technical Data

For the maximum permissible loads please refer to the table below. If several forces and moments loads act upon the guide simultaneously, the following equation will apply:

$$\frac{F_x}{F_{x_{\max}}} + \frac{F_y}{F_{y_{\max}}} + \frac{F_z}{F_{z_{\max}}} + \frac{M_x}{M_{x_{\max}}} + \frac{M_y}{M_{y_{\max}}} + \frac{M_z}{M_{z_{\max}}} \leq 1$$

The total of the loads must not exceed 1 under any circumstances.

OSP-E..SB, ..ST

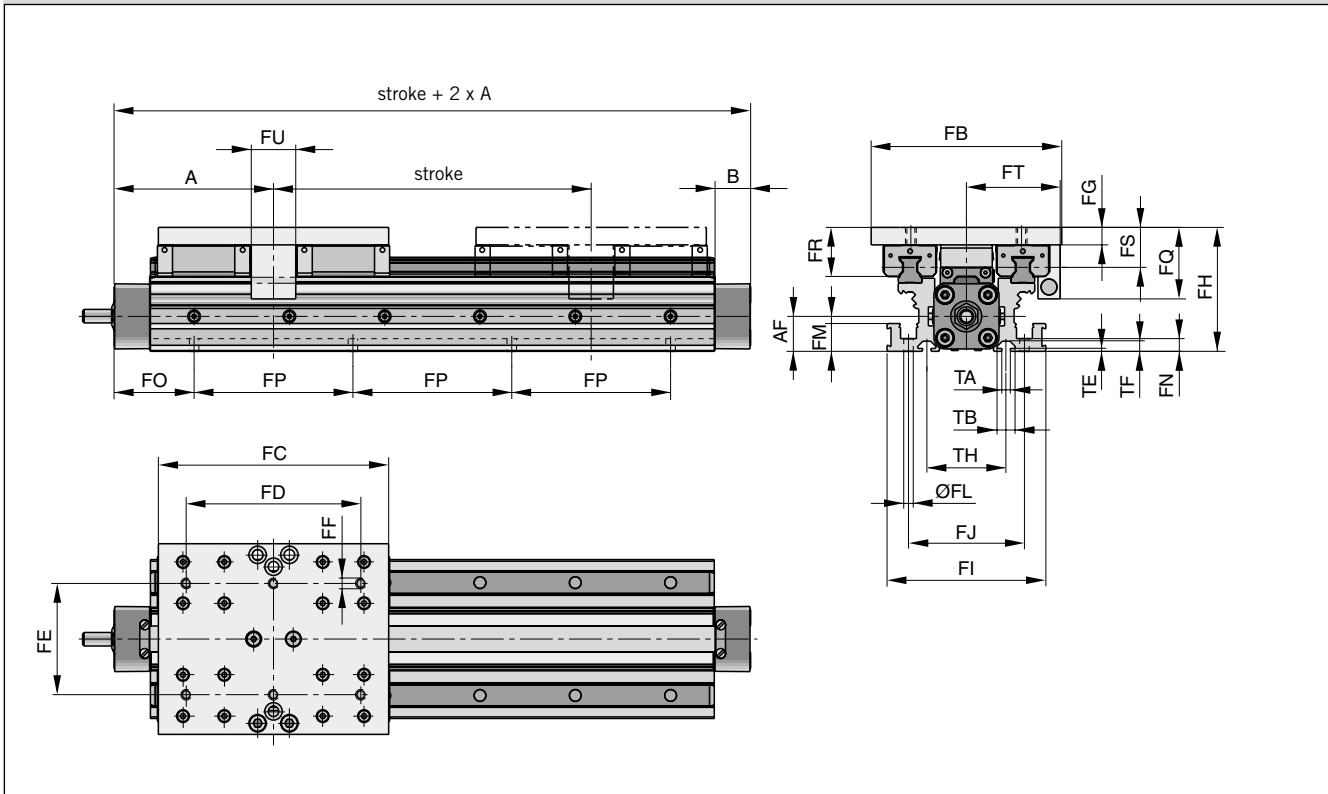

The table shows the maximum permissible values for light, shock-free operation which must not be exceeded even under dynamic conditions.

Features:

- Guide system
 - 4-row ball bearing guide
- polished and hardened guide rails of steel
- for highest loads in all directions
- highest precision
- integrated wiper
- grease nipple for relubrication
- anodized guide carriage with the same connecting dimensions as OSP-guide GUIDELINE
- maximum velocity $v = 5 \text{ m/s}$

Planetary Gears

Series PV040, 060

The requirements between transmissible power and size of gear is given from purpose and a feasible resolution. Respectively the realization is not only preset by actuator and motor, more than takes the gear an important part of design.

Maintenance

The serie PV is maintenace free, i.e. containing lubrication for lifetime.

Coupling Housing Motor Flange

Size 20, 25, 32, 50

- **OSP-E..BHD**
Belt Actuator with integrated guide

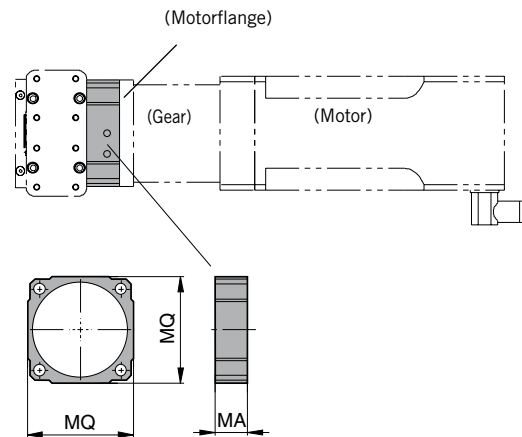

Via the coupling housing the gear or the motor can be fitted directly to the actuator and the drive shafts by means of a motor flange.

The motor flange matches the above mentioned coupling housing and has to be reworked to match the respective type of motor.

Motor flanges for the available range of gears, servo and stepper motors are included in the respective data sheet, including technical data and dimensions. Please refer to the respective catalogues.

Coupling Housing

Motor Flange

Motor Coupling

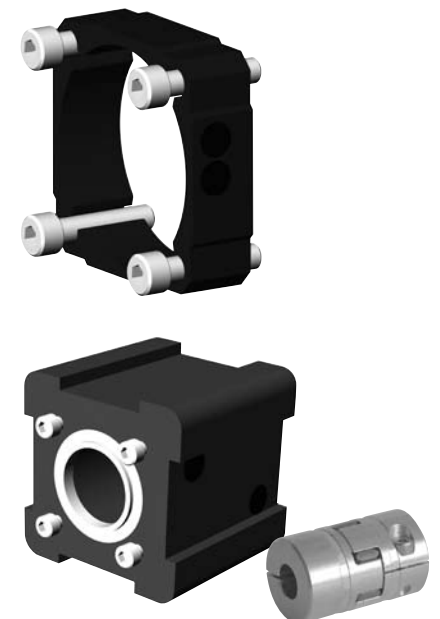

Size 20, 25

- OSP-E..BV
Vertical belt actuator with integrated ball bearing guide

The coupling housing with suitable motor flange allows proper connection between the drive shaft of the actuator and the gear shaft or motor shaft. The gear or motor can either be fitted to the actuator directly or indirectly. If a Parker Origa gear is used, direct clamping of the gear shaft into to the drive shaft with clamping hub. As an alternative the gear or motor can be fitted to the actuator via a motor coupling.

¹⁾Hint:
when selecting the type of motor mounting please observe the respective drive shaft versions in accordance with the ordering code of the actuator (page 36).

Coupling Housing Motor Flange Motor Coupling

Size 25, 32, 50

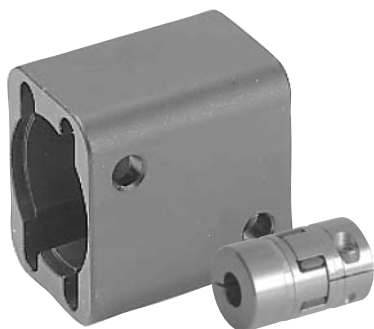

- **OSP-E..B**
Belt actuator with internal plain bearing guide

The coupling housing with suitable motor flange allows easy and inherently stable connection of the gear or the motor to the actuator.

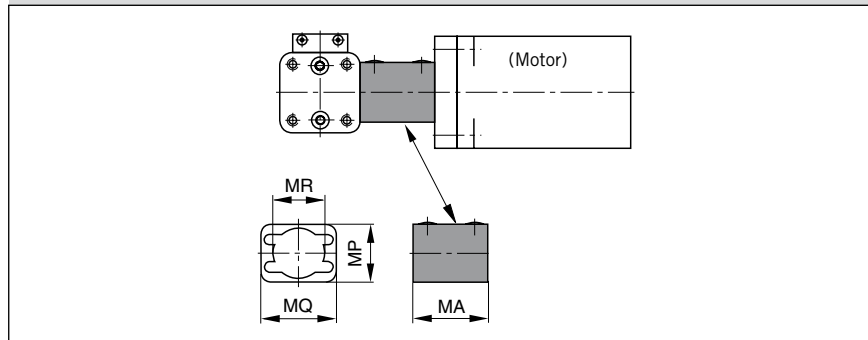

Hint:

Let us know the mounting dimensions of your motor. Upon request we will be pleased to check and manufacture a motor flange that will come up to your individual needs.

(Also see "motor flange for freely selectable mounting dimensions" page 126 ff)

Coupling Housing Motor Flange Motor Coupling

Size 25, 32, 50

- OSP-E..SB
Ball screw actuator with internal plain bearing guide
- OSP-E..ST
Trapezoidal screw actuator with internal plain bearing guide
- OSP-E..SBR
Ball screw actuator with internal plain bearing guide and piston rod
- OSP-E..STR
Trapezoidal screw actuator with internal plain bearing guide and piston rod

The coupling housing with suitable motor flange allows easy and inherently stable connection of the gear or the motor to the actuator.

Hint:

Let us know the mounting dimensions of your motor. Upon request we will be pleased to check and manufacture a motor flange that will come up to your individual needs.
(Also see "configurable motor flange" page 128)

Motor Flange

for freely selectable
mounting dimensions

Size 25, 32, 50

- **OSP-E..B**
Ball actuator with internal plain bearing guide
- **OSP-E..SB**
Ball screw actuator with internal plain bearing guide
- **OSP-E..ST**
Trapezoidal screw actuator with internal plain bearing guide
- **OSP-E..SBR**
Ball screw actuator with internal plain bearing guide and piston rod
- **OSP-E..STR**
Trapezoidal screw actuator with internal plain bearing guide and piston rod

The motor flange for motors with freely selectable mounting dimensions offers flexible possibilities to connect most different types of motors to the electric actuators OSP-E.
The drive shafts of actuator and motor are connected with a motor coupling in the coupling housing and the motor flange is centred.

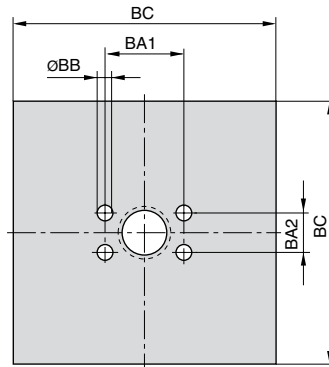

Hint

Please check the following data for the connection of the motor to the freely selectable motor flange and state when ordering:

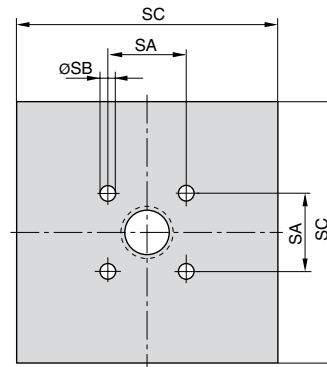

1. mounting angle W of the motor
2. bore hole version B as thread M or counterbore S
3. pitch circle diameter A as a function of M or S
4. Diameter of centring spigot D
5. Length of motor shaft G

Belt Gear

for freely selectable mounting dimensions

Size 25, 32, 50

• Series OSP-E..SB, ..ST, ..SBR, ..STR Actuator with Screw

The belt gear with its freely selectable mounting dimensions offers the possibility to fit most different types of motors to the actuator parallel to the motor axis.

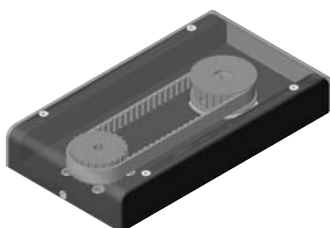

After the flange dimensions of the motor had been checked, the mounting side of the motor will be prepared for the individual demands of the customer.

When ordering please observe the version of the drive shaft of the actuator OSP-E with spindle. This version can either be ordered with plain shaft or plain shaft with keyway (Option). (If the version keyway is selected, the delivery period may be elongated.)

Profile Mounting

Size 20, 25, 32, 50

- **OSP-E ..BHD**
Belt actuator with integrated guide

Note on Types E1 and D1:
The Profile Mounting can also be mounted on the underside of the actuator, in which case its distance from the centre of the actuator is different.

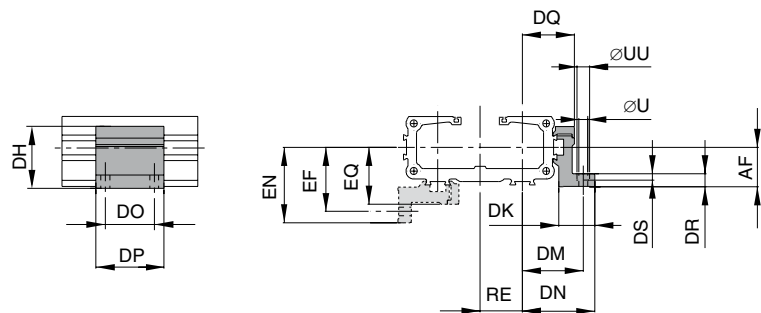

For design notes, see page 14 ff.

Stainless steel version on request.

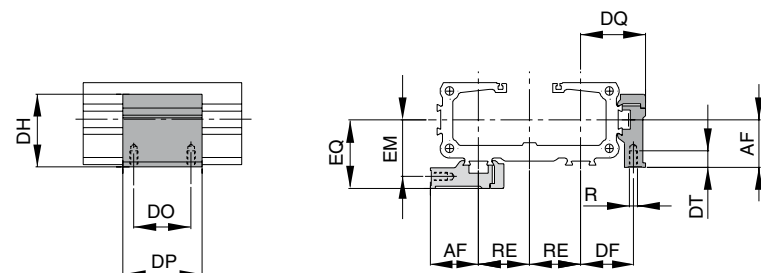

The mountings are supplied singly.

Series OSP-E20BHD to E50BHD: Type E1
(Mounting with through holes)

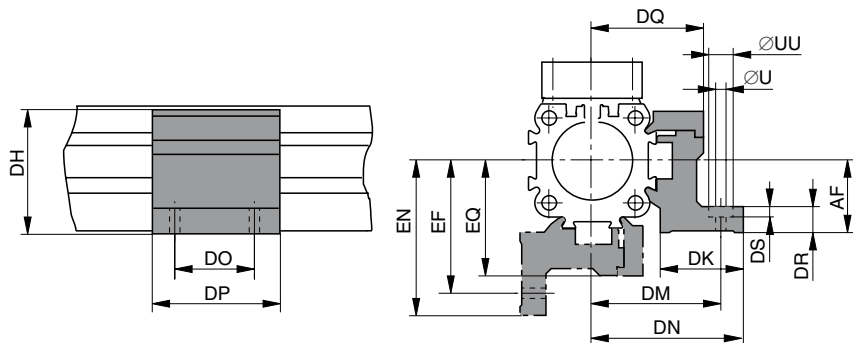

Series OSP-E20BHD to E50BHD: Type D1
(Mountings with internal thread)

Pivot Mounting EL (OSP-E..SBR, ..STR)	142
Compensation (OSP-E..B, ..SB, ..ST)	144
Compensation, low backlash (OSP-E..B, ..SB, ..ST)	145
Inversion Mounting (OSP-E..B, ..SB, ..ST)	146

Clevis Mounting

Size 25, 32, 50

- **OSP-E..B**
Belt actuator with internal plain bearing guide
- **OSP-E..SB**
Ball screw actuator with internal plain bearing guide
- **OSP-E..ST**
Trapezoidal screw actuator with internal plain bearing guide

When external guides are used, parallelism deviations can lead to mechanical strain on the piston. This can be avoided by the use of a Compensation.

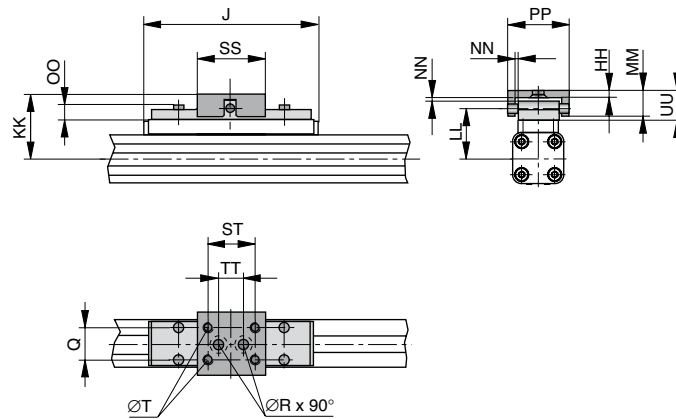

Freedom of movement is provided as follows:

- **Tilting in direction of movement**
- **Vertical compensation**
- **Tilting sideways**
- **Horizontal compensation**

A stainless steel version is also available.

Series OSP-E50

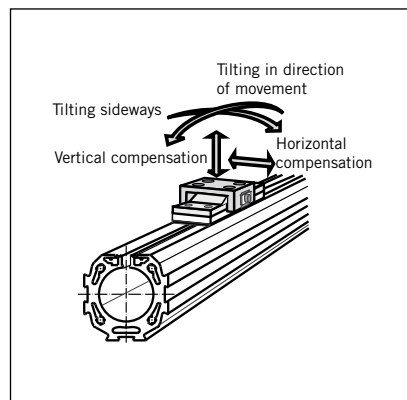

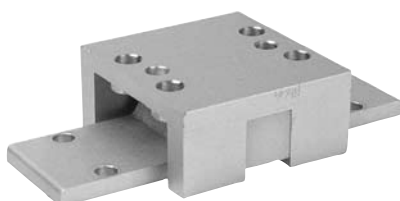

OSP-E..B, ..SB, ..ST

Clevis Mounting, low back lash

Size 25, 32, 50

OSP
— ORIGA
— SYSTEM
— PLUS

- **OSP-E..B**
Belt actuator with internal plain bearing guide
- **OSP-E..SB**
Ball screw actuator with internal plain bearing guide
- **OSP-E..ST**
Trapezoidal screw actuator with internal plain bearing guide

When external guides are used, parallelism deviations can lead to mechanical strain on the piston. This can be avoided by the use of a clevis mounting.

In the drive direction the clevis mounting has a low backlash fit.

Freedom of movement is provided as follows:

- **Tilting in direction of movement**
- **Vertical compensation**
- **Tilting sideways**
- **Horizontal compensation**

A stainless steel version is also available.

* Dimension NN gives the possible plus and minus play in horizontal and vertical movement, which also makes tilting sideways possible

Please note:

When using additional inversion mountings, take into account the dimensions in data sheet page 125 ff

Inversion Mounting

Size 25, 32, 50

- **OSP-E..B**
Belt actuator with internal plain bearing guide
- **OSP-E..SB**
Ball screw actuator with internal plain bearing guide
- **OSP-E..ST**
Trapezoidal screw actuator with internal plain bearing guide

In dirty environments, or where there are special space problems, inversion of the cylinder is recommended. The inversion bracket transfers the driving force to the opposite side of the cylinder. The size and position of the mounting holes are the same as on the standard cylinder.

Stainless steel version on request.

Please note:

Other components of the OSP system such as **Profile Mountings**, **magnetic switches** can still be mounted on the free side of the cylinder.

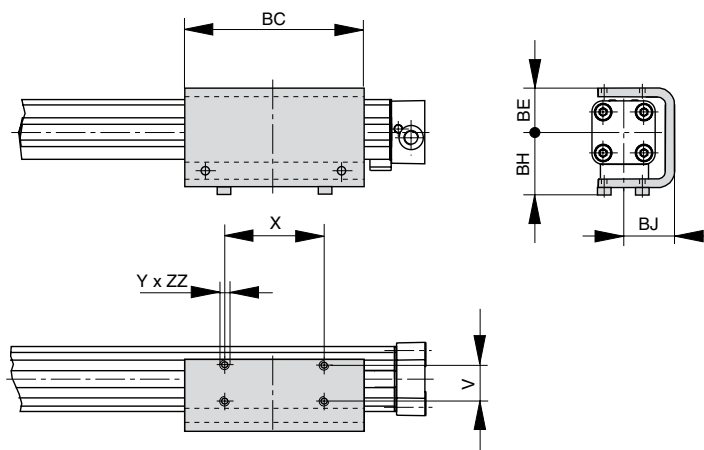

Important Note:

May be used in combination with **Compensation**, ref. dimensions in page 143.

Magnetic Switches

OSP
— ORIGA
— SYSTEM
— PLUS

Type RS-.

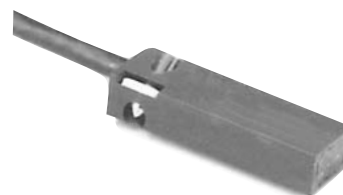

Type ES-.

For electric sensing of the carrier position, e.g. at the end positions, magnetic switches may be fitted. The magnetic switches can as well be used as cut-out switches for a lot of intermediate positions.

Position sensing is contactless and is based on magnets fitted as standard to the carrier. A yellow LED indicates operating status.

Piston speed and switching distance affect signal duration and should be considered in conjunction with the minimum reaction time of ancillary control equipment. In accordance to this, the contact travel must be included in the calculation.

$$\text{Min. reaction time} = \frac{\text{Switching distance}}{\text{Piston speed}}$$

Magnetic Switches RS and ES

Electric Service Life Protective Measures

Type RS magnetic switches are sensitive to excessive currents and inductions. With high switching frequencies and inductive loads such as relays, solenoid valves or lifting magnets, service life will be greatly reduced.

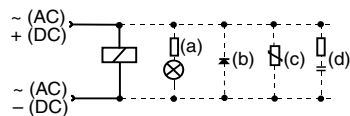

With **resistive** and **capacitive** loads with high switch-on current, such as light bulbs, a protective resistor should be fitted. This also applies to long cable lengths and voltages over 100 V.

In the switching of inductive loads such as relays, solenoid valves and lifting magnets, voltage peaks (transients) are generated which must be suppressed by protective diodes, RC loops or varistors.

Connection Examples

Load with protective circuits

- (a) Protective resistor for light bulb
- (b) Freewheel diode on inductivity
- (c) Varistor on inductivity
- (d) RC element on inductivity

For the type ES, external protective circuits are not normally needed.

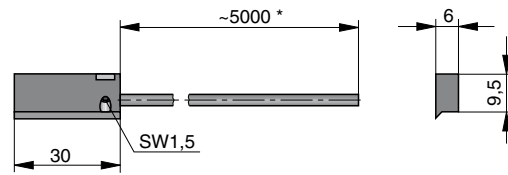

Type RS

In the type RS contact is made by a mechanical reed switch encapsulated in glass.

Type ES

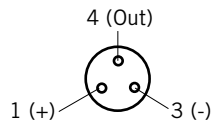

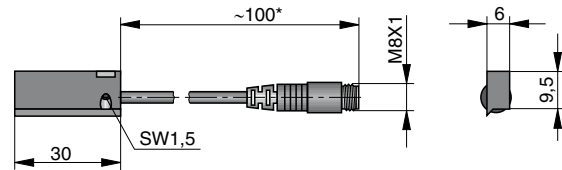

In the type ES contact is made by an electronic switch – without bounce or wear and protected from pole reversal. The output is short circuit proof and insensitive to shocks and vibrations.

Dimensions [mm] – Type RS-K

* Length with possible minus tolerance, see chart below

Dimensions [mm] – Type ES-S/RS-S**

PIN assignment
(view of pins)
according to DIN EN 50044

Positioning of Magnetic Sensors/Permanent Magnets — OSP-E..BHD

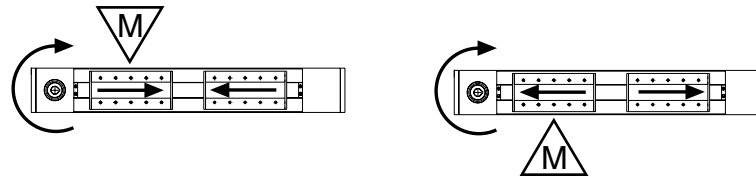

Standard Version

Drive Shaft Option = 0

Drive Shaft Option = 1

Bi-Parting Version

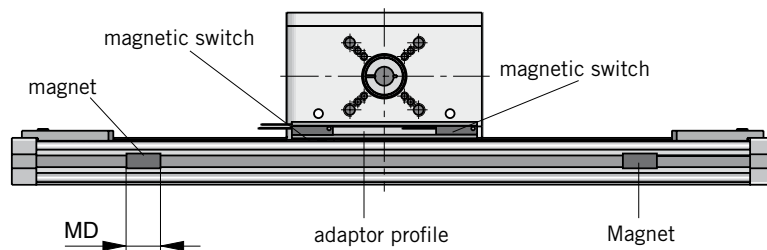

Drive Shaft Option = 2

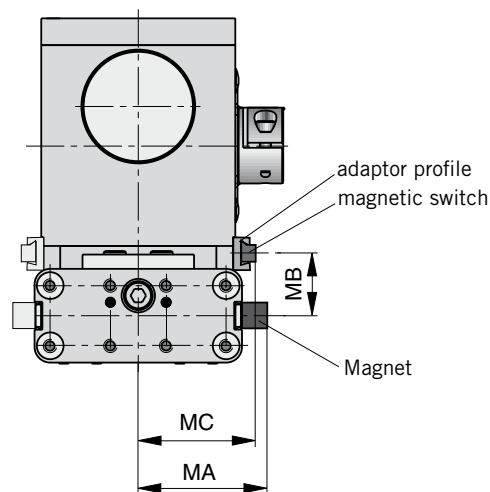

Drive Shaft Option = 3

When arranging the magnetic switches, please mind the position of the magnets integrated in the carrier as a function of the operating direction.
„M“ indicates where magnet is fitted in carrier.

Dimensions for magnetic switch set Series OSP-E..BV

The magnetic switch as well as the magnet can be fitted to either side

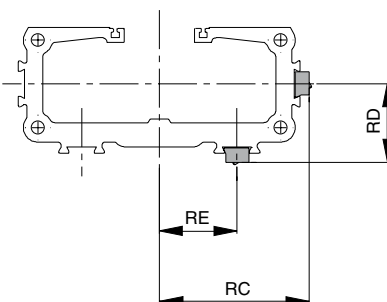

Dimensions see page 154 ff

Magnetic switch and magnet are externally fitted to the OSP-E..BV.

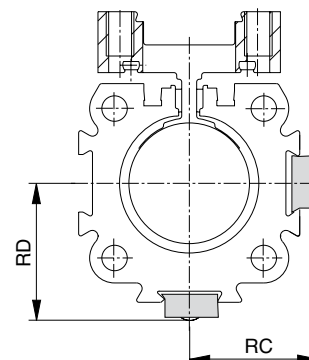

For this purpose please order the magnetic switch set (consisting of 2 magnetic switches, 1 fastening rail and 2 magnets) for contactless position sensing.

Position Measuring System

SFI-plus

Contents

Description	Page
Position Measuring System	160

Displacement Measuring System

for automated movement

ORIGA-Sensoflex

(Incremental Displacement Measuring System)

Series SFI-plus

- **OSP-E..SB**
Ball screw actuator with internal plain bearing guide
- **OSP-E..ST**
Trapezoidal screw actuator with internal plain bearing guide

Special properties:

- contactless, magnetic displacement measuring system
- freely selectable displacement length up to 32 m
- resolution 0,1 mm
- displacement speed up to 10 m/s
- suited for linear and gyratory movements
- for almost all control and display units with suitable counter input

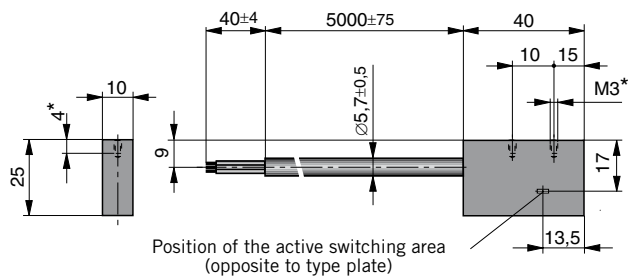

The magnetic displacement measuring system SFI-plus consists of 2 main components:

- **Measuring scale**
self-adhesive, magnetic measuring scale
- **Sensing head**
converts the magnetic poles into electric signals which are then processed by counter inputs downstream (e.g. PLC, PC, digital counters)

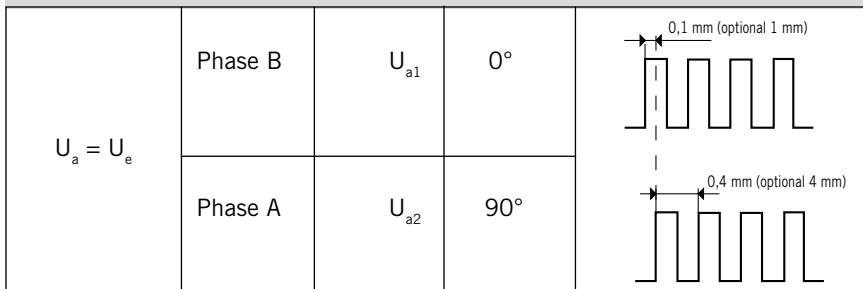

Characteristics		
Characteristics	Unit	Description
Type		21210
Output function		
Resolution	mm	0.1

Ambient conditions/shock resistance		
Encapsulation class	IP	67 according to EN60529
Ambient temperature range		°C -25 to +80
Broad band noise according to EN 60068-2-64	g	5.5 Hz to 2 kHz, 0.5 h per axis
Vibration according to EN 60068-2-6	g	12, 10 Hz to 2 kHz, 2 mm, 5 h per axis
Shock acc. EN 60068-2-27	g	100, 6 ms, 50 shocks per axis
Continuous shock according to EN 60068-2-29	g	5, 2 ms, 8000 shocks per axis

Dimensions [mm] – Reading Head

* Max. thread depth 4mm

Signal curve – sensing head OUT

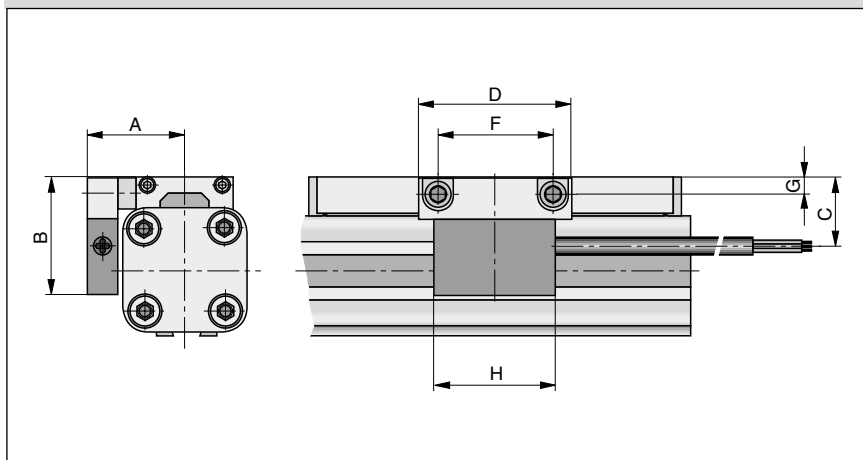

Sensing head

The sensing head supplies two pulsating, 90° out of phase counter signals (phase A/B) with a resolution of 0.4 mm (option 4 mm). External pulse edge control can improve the resolution to 0.1 mm (option 1 mm). The counting direction automatically results from the phase shift of the counter signal.

Electric connection

colour	Designation
bn = brown	+ DC
bl = blue	– DC
bk = black	phase A
wt = white	phase B

Dimensions – in combination with OSP-E actuators

Dimension Table [mm]

OSP-E32SB, ST	37.5	46	30	50	38	6.5	40
OSP-E50SB, ST	49.5	55	39	50	38	6.5	40

SFI-plus in connection with electric actuators of series OSP-E..ST

The SFI-plus can be mounted directly to the electric actuator of series OSP-E..ST by means of a special mounting kit.

The position of the sensing head is generally staggered by 90° to the carrier.

For later installation a corresponding carrier kit with threaded holes can be ordered.

SFI-plus in connection with electric actuators of series OSP-E..SB

The displacement measuring system in connection with series OSP-E..SB can only be retrofitted, if the system is reconditioned by the manufacturer.

Order Instructions	
Description	Order No.
Sensing head with measuring scale – resolution 0.1 mm (please indicate scale length)	21240
Sensing head - resolution 0.1 mm (spare part)	21210
Measuring scale per meter for (to be replaced)	21235
Mounting kit for OSP-P25	21213
Mounting kit for für OSP-P32	21214
Mounting kit for für OSP-P50	21216

* The overall length of the measuring scale results from the dead length of the actuator and the stroke length.
For dead lengths for actuators of series OSP-E see table.

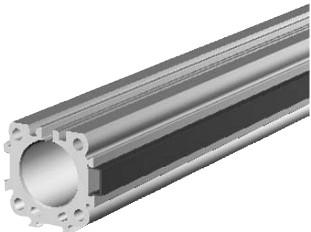

Series	Dead lengths [mm]
OSP-E25SB, ST	154
OSP-E32SB, ST	196
OSP-E50SB, ST	280

Example:

Actuator OSP-E, Ø25 mm,
stroke 1000 mm

Dead length + stroke = overall length of the measuring scale
154 mm + 1000 mm = 1154 mm

Multi-Axis Connections for Electric Actuators

Contents

Description	Page
Overview	168
Adapter plates	171
Intermediate Drive Shafts	181

MULTI-AXIS CONNECTION SYSTEM – SIMPLIFIES ENGINEERING AND INSTALLATION

A completely new system for easy connection of OSP-E actuators
in multi-axis systems.

MULTI-AXIS CONNECTIONS

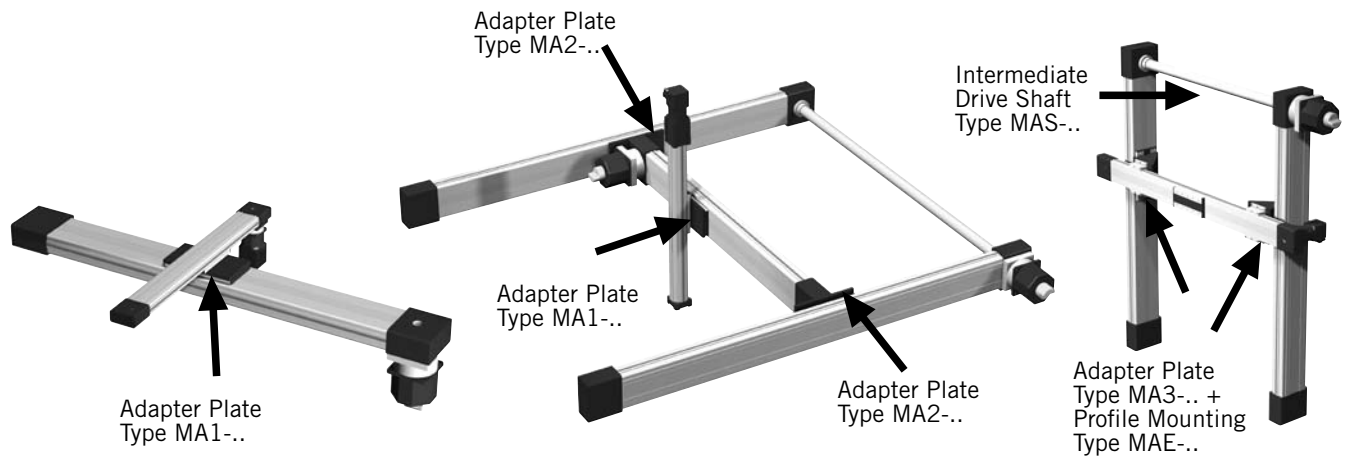

With this highly adaptable system for connection of actuators in multi-axis arrangements, Parker Origa offers design engineers complete flexibility. A wide range of adapter plates, profile mountings and intermediate drive shafts simplify engineering and installation.

The connection system enables actuators to be mounted in carrier to carrier, carrier to profile, carrier to end cap mounting, carrier to end cap.

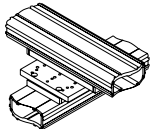

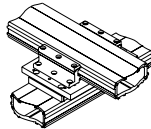

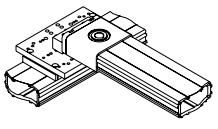

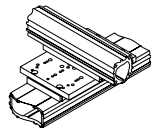

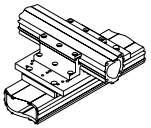

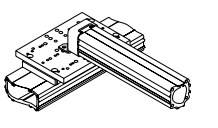

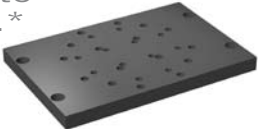

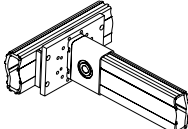

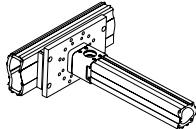

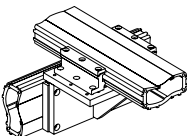

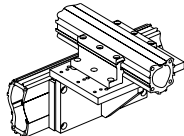

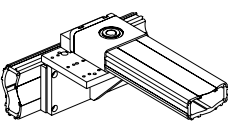

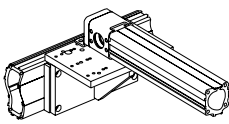

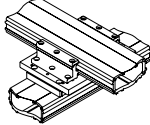

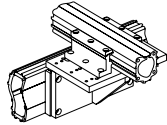

Developed for the heavy-duty belt drive series OSP-E..BHD, the system provides cross-connection with the same series and also other actuator series in the ORIGA SYSTEM PLUS range.

OSP
— ORIGA
— SYSTEM
— PLUS

Technical drawing of a rectangular plate with dimensions and hole specifications. The plate has a total width of 175 and a total height of 240. The drawing shows a grid of holes with the following dimensions:

- Horizontal dimensions (from left edge): 175, 158, 100, 79, 70, 36, 27.
- Vertical dimensions (from top edge): 27³⁾, 36⁷⁾, 70^{11,23)}, 79³⁾, 100⁷⁾, 158¹¹⁾, 255.

The plate is divided into four quadrants by a vertical centerline and a horizontal centerline. The holes are arranged in a grid pattern. The bottom edge of the plate is labeled with the following specifications:

- Ø6.60 (24x) 11 7
- Ø5.50 (8x) 10 6
- 90

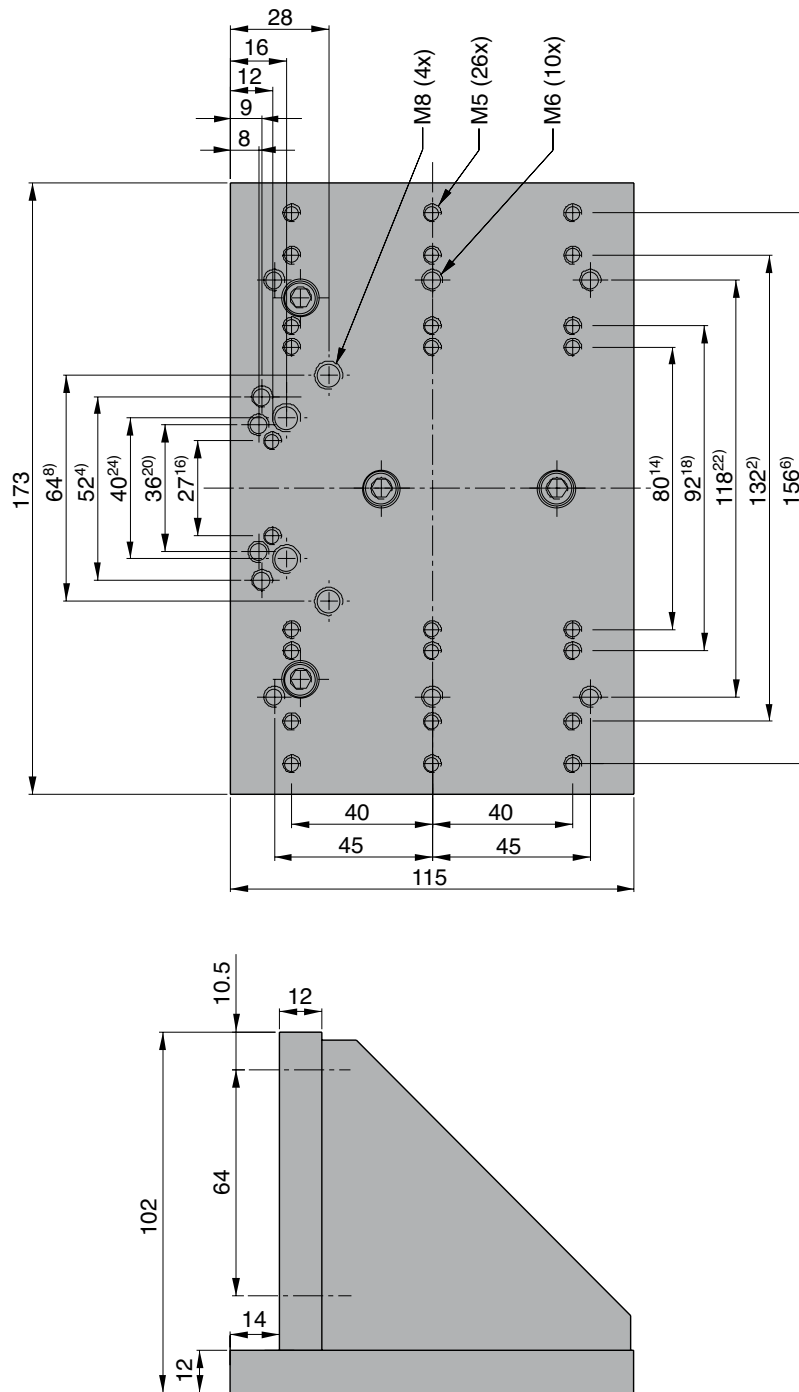

The bottom edge of the plate is also labeled with a dimension of 12.
